公司金融

中英文对照速学讲义

Corporate Issuers
Bilingual Fast-Track Study Guide

先懂知识点，再用原题练会。

Understand the concepts first, then master them through the supplied questions.

67 道原题 Original items	7 个学习单元 Study units	66 道可计分题 Scorable items
完整保留题干及 A/B/C 选项 Stems and choices retained	按知识点重组，先教后练 Concept-first organization	第 9 题独立标注错配 Q9 isolated as a source anomaly

你会获得什么

What this guide provides

知识点讲解 · 原题双语对照 · 正确答案与排错 · 计算步骤 · 公式表 · 全题索引

Concept lessons · Bilingual original questions · Answers and distractor analysis · Worked calculations · Formula sheet · Complete question index

资料依据：用户提供的《1000题(8).pdf》公司发行人部分与《公司金融(2).pdf》。

Source basis: the Corporate Issuers section of the supplied question bank and its separate answer document.

整理日期：2026 年 11 月 2 日。教材年份、出版方及逐题官方 / 模拟来源未明确标注；本讲义不自行推定。

Prepared 2 November 2026. The materials do not clearly identify curriculum year, publisher, or official/mock status for individual questions; none is inferred.

使用方法与来源说明

How to use this guide and read its sources

建议先用 90 分钟建立框架，再用 45-60 分钟完成 66 道有效题。时间仅为学习建议：遇到错题，回到对应知识点，不必平均分配时间。

Build the framework in a suggested 90-minute first pass, then allow 45-60 minutes for the 66 usable questions. These times are study targets, not promises. Revisit the linked concept whenever you miss a question.

阶段 / Pass	任务 / Task	原题抓手 / Original anchors
第 1 段：35 分钟 First 35 minutes	单元 5-6：NPV、IRR、期权、WACC、MM Units 5-6: NPV, IRR, options, WACC and MM	Q23, 28, 48, 51, 57, 59, 67
第 2 段：35 分钟 Next 35 minutes	单元 1-4：法律形式、风险、治理、流动性 Units 1-4: forms, risk, governance and liquidity	Q1, 4, 19, 32, 35, 43, 47, 58, 10
第 3 段：20 分钟 Final 20 minutes	单元 7 与公式表：关键词匹配，再看易错点 Unit 7 and formulas: match keywords and review traps	Q12, 61
第二轮：45-60 分钟 Second pass	遮住答案，完成全部有效题；标记猜对和超时题 Cover answers; attempt every usable item and mark guesses or delays	Q1-Q67，排除 Q9 Exclude Q9

每道题怎样读

How to read each question

先看题干及选项，自己作答；再看答案、推理和排错。计算题必须亲手写出输入、公式、单位与结果。原题编号 Q 保留不变；学习单元编号是本讲义为便于学习而重组的编号。

Attempt the stem and choices before reading the answer, reasoning and eliminations. For calculations, write the inputs, formula, units and result yourself. Original Q numbers are preserved. Unit numbers are this guide’s organizational labels.

来源与完整性

Source and completeness

题库：PDF 第 30-40 页，原章节页码 1-11，Q1-Q67。答案：PDF 第 1-67 页，每页对应同号原题。原题均标为“用户提供题库”，不擅自认定官方或模拟题。

Questions: PDF pages 30-40, printed chapter pages 1-11, Q1-Q67. Answers: PDF pages 1-67, one page per matching question. Provenance is labelled “user-supplied question bank”; official or mock status is unverified.

英文保留原题内容，整理换行和表格；中文为对应翻译。知识点与解析为本讲义编写，并依据答案文件核对。未补写缺失题干或选项。

English content is retained with line breaks and tables reorganized. Chinese is a corresponding translation. Teaching and explanations are newly written and checked against the answer file. Missing stems or choices are not reconstructed.

先记住这张知识地图

Start with this concept map

学习单元 / Unit	最快判断规则 / Fast decision rule	题数 / Items
01 企业组织形式与所有权 Organizational Forms, Issuer Features and Ownership	股东拿剩余回报，债权人拿合同回报；投资者与发行人的风险视角相反。 Equity is residual, debt contractual; investor and issuer risk perspectives differ.	11
02 投资者与其他利益相关者 Investors and Other Stakeholders	谁拥有、谁决策、谁承担风险？据此找委托代理与利益冲突。 Identify ownership, decision rights and risk to locate agency conflicts.	5
03 公司治理、利益冲突与 ESG Corporate Governance, Conflicts of Interest and ESG	董事会监督管理层；独立监督、激励和契约降低代理问题。 The board oversees management; monitoring, incentives and contracts address agency problems.	6
04 营运资本与流动性 Working Capital and Liquidity	Drag 是收得慢；pull 是付得早或信用收紧。 Drag means slower receipts; pull means earlier payment or tighter credit.	5
05 资本投资与资本配置 Capital Investments and Capital Allocation	用税后增量现金流计算 NPV；互斥项目排序冲突时优先 NPV。 Use incremental after-tax cash flows; prioritize NPV in conflicting mutually exclusive rankings.	12
06 资本结构 Capital Structure	先问有没有税，再分清 D/E 与资本权重；只给债务成本作税盾调整。 Identify the tax assumption, convert D/E to weights, and tax-adjust debt cost only.	16
07 商业模式 Business Models	抓关键词：生产、royalty、用户贡献、跨企业、不同买方或不同时间。 Match manufacturing, royalty, user contributions, cross-firm flows, buyers or timing.	11

这些题数反映本次上传题库的分布，不代表 CFA 考试权重。本资料没有覆盖到的知识点，不等于考试不会考。

These counts describe this uploaded question set, not CFA exam weights. A topic absent from these files is not thereby excluded from the exam.

三个先决条件，决定是否能套公式

Three conditions to check before applying a formula

1. NPV 与 IRR 的单调关系：先确认常规现金流。
2. MM 结论：先确认有税或无税及模型假设。
3. WACC 权重：先确认市值、资本来源和比率分母。

1. NPV-IRR monotonicity: verify conventional cash flows.
2. MM results: identify the tax regime and assumptions.
3. WACC weights: verify market values, capital sources and the ratio denominator.

01 企业组织形式与所有权

Organizational Forms, Issuer Features and Ownership

先抓住三个判断维度：谁承担债务、谁控制经营、资本能否方便退出。遇到债务与股权比较题，先圈出题目问的是投资者还是发行人，避免把风险方向答反。

Start with three questions: who bears the liabilities, who controls the business, and how easily can investors exit? When comparing debt and equity, first identify whether the question concerns the investor or the issuer; their risk perspectives differ.

本单元 11 题 / 11 original items: Q01 · Q04 · Q06 · Q21 · Q24 · Q35 · Q39 · Q43 · Q45 · Q60 · Q63

先学知识点 / Learn the concepts

1.1 组织形式：独立主体与有限责任

Organizational form: separate identity and limited liability

独资企业是所有者经营活动的延伸，优点是经营简单、灵活；独资所有者与普通合伙人通常承担无限责任。公司制企业是独立于股东的法律主体，股东一般仅以投入的资本承担损失。有限责任限制的是所有者对企业债务的责任，不代表企业本身不用偿债。

A sole proprietorship is an extension of its owner and offers operational simplicity and flexibility. Sole proprietors and general partners normally have unlimited liability. A corporation has a legal identity separate from its shareholders, whose losses are generally limited to their investment. Limited liability restricts the owners' exposure to business debts; it does not remove the corporation's own obligation to repay them.

对应原题 / Linked originals: Q24 · Q39

1.2 有限合伙与利润双重征税

Limited partnerships and double taxation of profits

在本题库的典型有限合伙结构中，普通合伙人（GP）负责经营并承担无限责任；有限合伙人（LP）承担有限责任，但不控制日常经营。税收方面，合伙利润通常归到合伙人层面纳税；公司制企业在实行双重征税的制度下，利润先缴公司税，分配给股东后可能再缴股息税。

In the typical limited partnership used in these questions, the general partner (GP) operates the business and has unlimited liability. Limited partners (LPs) have limited liability but do not control business operations. Partnership profits are generally taxed at the partner level. Under a double-taxation system, corporate profit is taxed first at the company level and may be taxed again when distributed to shareholders. These are the question bank's general comparisons, not universal tax rules.

对应原题 / Linked originals: Q35 · Q45

1.3 债务与股权：约定付款与剩余索取权

Debt and equity: promised payments and residual claims

债权人有按约收取利息和本金的权利；普通股股东是剩余索取权人，企业一般没有必须派息的义务。普通债务的回报受合同限制，股权的上涨空间理论上没有固定上限。在按本题通常采用的无杠杆、无额外担保投资中，两类投资者最多损失其投入金额。

Creditors are entitled to contractual interest and principal payments. Common shareholders are residual claimants, and the company generally has no obligation to pay dividends. Ordinary debt has contractually limited returns, while equity has no fixed theoretical upside limit. Under the questions' assumption of an outright investment without borrowing or additional guarantees, either type of investor can lose at most the amount invested.

对应原题 / Linked originals: Q01 · Q43

1.4 风险视角：投资者与发行人方向相反

Risk perspective: investors versus issuers

对投资者，债权优先于股权受偿，因此股权通常风险较高、要求回报较高。对发行人，债务要求按期付息还本，现金不足可能引发违约，因此债务通常比股权更有融资压力。债务成本较低，不等于对发行人更安全；普通股没有到期日，通常提供更永久的资本。

For investors, debt ranks ahead of equity, so equity generally carries greater risk and a higher required return. For issuers, debt creates compulsory payment dates and a risk of default if cash is insufficient. Debt can therefore be cheaper yet riskier for the company. Common equity normally has no maturity date and provides a more permanent source of capital. Always state whose risk is being assessed.

对应原题 / Linked originals: Q21 · Q43

1.5 公众公司与私人公司：上市、透明度与退出

Public and private companies: listing, transparency and exit

本题库以股票是否上市作为主要区分：公众公司通常有可观察的交易价格，投资者较多，股份较易转让；私人公司通常价格较不透明、融资参与者较少、持有期较长。私人发行更可能限定认可或合资格投资者，但并非所有私人公司投资都一律受相同资格限制。Public 不表示政府拥有。

These questions mainly distinguish companies by whether their shares are exchange-listed. Public companies generally have observable prices, more investors and easier ownership transfers. Private companies usually have less price transparency, fewer financing participants and longer holding periods. Private offerings are more likely to be restricted to accredited or qualified investors, although this is not a universal rule for every private investment. Public does not mean government-owned.

对应原题 / Linked originals: Q04 · Q06 · Q60 · Q63

对照记忆 / Compare and remember

视角 / Perspective	债务 / Debt	股权 / Equity
投资者 / Investor	合同回报、优先求偿，通常风险较低 Contractual return and priority; usually lower risk	剩余回报与剩余索偿，通常风险较高 Residual return and claim; usually higher risk
发行人 / Issuer	必须按约付息还本，财务风险较高 Contractual servicing increases financial risk	普通股股利通常可自行决定，且无固定到期日 Ordinary dividends generally discretionary; no fixed maturity

最容易错在哪里 / Common traps

债务成本较低，但对发行人通常带来更高的强制付款和违约风险。

Debt is generally cheaper, but it imposes compulsory payments and default risk on the issuer.

有限合伙中的 GP 与 LP 责任不同；不能把整个有限合伙都理解成有限责任。

GPs and LPs have different liability exposures; a limited partnership does not give every partner limited liability.

Public company 是公众公司；不是“国有企业”的同义词。

A public company is not synonymous with a government-owned enterprise.

双重征税与认可投资者属于题目中的典型比较，不能不加条件地套用到每个地区。

Double taxation and accredited-investor restrictions are typical comparisons here, not unconditional rules for every jurisdiction.

先分组织形式，再分债务或股权，最后确认投资者或发行人的视角。

Identify the organizational form, distinguish debt from equity, and then confirm whether the perspective is the investor's or the issuer's.

单元 01 原题练习与讲解

Original questions and worked explanations

Q01 必须支付的融资款项

Compulsory financing payments

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.1。

原题 / Original question

如果一家公司同时通过债务和股权融资，该公司必须支付下列哪一项？

If a corporation is financed with both debt and equity, which of the following must the corporation pay?

A 仅利息 / Interest only

B 仅股息 / Dividends only

C 利息和股息都必须支付 / Both interest and dividends

正确答案 / Answer: A

债务产生按合同支付利息及到期偿还本金的义务；股东虽然可以获得已决定分配的利润，公司一般没有必须派发普通股股息的义务。因此在给定的三个选项中，必须支付的是利息。题目问付款义务，不是两类投资者可能获得什么收入。

Debt creates contractual obligations to pay interest and repay principal at maturity. Shareholders can receive distributions, but the company generally has no obligation to declare common dividends. Interest is therefore the compulsory payment among the choices. The question concerns what must be paid, rather than what each investor might receive.

其他选项为什么错 / Why the other choices fail

B 错在把股息当成强制付款；C 也包含并非必须派发的股息。

B incorrectly treats dividends as compulsory. C also includes dividends, which need not be declared.

> 债务有约定付款；普通股股息通常由公司决定。
>
> Debt has promised payments; common dividends are generally discretionary.

Q04 私人发行的投资者资格

Investor eligibility in private offerings

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.4。

原题 / Original question

购买下列哪类股票，最可能要求投资者具备认可投资者资格？

The purchase of which of the following shares most likely requires investors to be accredited?

A 仅公众公司股票 / Public company shares only

B 仅私人公司股票 / Private company shares only

C 公众公司股票和私人公司股票都包括 / Both public company shares and private company shares

正确答案 / Answer: B

私人发行的价格透明度、流动性和公开信息通常较低，因此更可能限定由具备相应资格和风险承受能力的投资者参与。原答案使用“may be limited”，说明这是“最可能”的比较，而非所有私人股票交易都必须满足同一资格条件。

Private offerings generally provide less price transparency, liquidity and public information, so participation is more likely to be restricted to investors regarded as qualified to bear the risks. The supplied answer says participation may be limited. This supports the most-likely comparison, not a universal eligibility rule for every private share transaction.

其他选项为什么错 / Why the other choices fail

A 把典型限制放到了公众公司；C 错在认为公众公司股票也普遍有此要求。

A assigns the typical restriction to public shares. C wrongly extends it generally to public shares as well.

> Private offering 更可能有资格限制；保留 most likely 的限定。
>
> Private offerings are more likely to restrict eligibility; retain the most-likely qualification.

Q06 公众与私人股价透明度

Public versus private share-price transparency

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.6。

原题 / Original question

私人公司最可能具有下列哪项特征？

Private companies most likely have:

A 与公众公司相比，股价透明度较低。 / less share price transparency compared to public companies.

B 与公众公司相比，股价透明度相近。 / similar share price transparency as public companies.

C 与公众公司相比，股价透明度较高。 / Greater share price transparency compared to public companies.

正确答案 / Answer: A

私人公司股票通常不在交易所连续交易，外部投资者难以观察公开、持续更新的市场价格。相较于上市交易的公众公司，私人公司的股价透明度通常更低。这里的“较低”不表示私人公司在任何情况下都完全没有估值资料。

Private shares normally do not trade continuously on an exchange, so outside investors cannot observe a regularly updated public market price in the same way. Price transparency is therefore generally lower than for exchange-traded public shares. Lower transparency does not mean that no valuation information can ever exist for a private company.

其他选项为什么错 / Why the other choices fail

B 与 C 均忽略私人股份缺乏公开连续交易这一特点。

B and C overlook the lack of continuous public trading in private shares.

> 不上市交易，通常意味着较低的价格透明度。
>
> No exchange listing generally means less price transparency.

Q21 发行人视角下的债务融资

Debt financing from the issuer's perspective

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.21。

原题 / Original question

从公司发行人的角度看，发行债务而非股权作为资本来源具有下列哪项优点？债务最可能：

From the perspective of a corporate issuer, which of the following is a benefit of issuing debt rather than equity as a source of capital? Debt is most likely:

A 成本更低。 / cheaper

B 风险更低。 / less risky

C 更具有永久性。 / more permanent.

正确答案 / Answer: A

债权人受偿顺序通常优先于股东，所要求的回报一般较低，所以债务通常是较便宜的资本来源。但发行人必须履行还本付息义务，债务会增加违约压力。看到“发行人视角”，不能把债券对投资者较安全的结论直接搬过来。

Creditors generally rank ahead of shareholders and require a lower return, making debt a cheaper source of capital. The issuer, however, must make the promised payments, so borrowing adds default pressure. Because the question explicitly takes the issuer's perspective, the relative safety of bonds for investors must not be transferred to the company itself.

其他选项为什么错 / Why the other choices fail

B 错：债务的强制付款通常增加发行人风险。C 错：债务通常有到期日，普通股资本通常更永久。

B is wrong because compulsory debt payments increase issuer risk. C is wrong because debt generally matures, whereas common equity is more permanent.

> 对发行人：债务通常便宜，但强制付款风险更高。
>
> For an issuer, debt is generally cheaper but brings compulsory-payment risk.

Q24 独资企业的特点

Features of sole proprietorships

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.24。

原题 / Original question

下列哪一项最可能是独资企业的特征？

Which of the following is most likely a feature of sole proprietorships?

A 具有法律身份。 / Existence of a legal identity

B 经营简单且灵活。 / Operational simplicity and flexibility

C 企业利润按公司所得征税。 / Taxation of business profits as corporate income

正确答案 / Answer: B

独资企业由单一所有者经营，组织和决策安排通常较简单，因此具有经营灵活的特点。题库采用的基本分类把独资企业视为所有者的延伸，而不是独立于所有者的法律主体；经营利润通常在个人层面纳税。

A sole proprietorship is operated by one owner and normally has a simple organizational and decision structure, supporting flexibility. In the basic classification used by the source, the business is an extension of its owner rather than a separate legal entity. Its profits are normally taxed as the owner's personal income.

其他选项为什么错 / Why the other choices fail

A 中的法律身份在原解析中指独立于所有者的主体身份，独资不具备这一特点；C 将个人所得错写成公司所得。

A refers in the supplied explanation to a separate identity from the owner, which a sole proprietorship lacks. C incorrectly treats personal business income as corporate income.

> 独资：简单灵活，业主与企业不分离。
>
> Sole proprietorship: simple and flexible, with no separation from the owner.

Q35 有限合伙中的经营责任

Operating responsibility in a limited partnership

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.35。

原题 / Original question

在有限合伙中，企业经营由下列哪一方负责？

In a limited partnership, business operations are the responsibility of:

A 仅普通合伙人。 / the general partner only.

B 仅有限合伙人。 / the limited partners only.

C 普通合伙人与有限合伙人共同负责。 / both the general partner and the limited partners.

正确答案 / Answer: A

本题采用的典型有限合伙结构把职责分成两类：普通合伙人（GP）经营企业并承担无限责任；有限合伙人（LP）投入资本并承担有限责任，但不控制日常经营。名称中的“有限”不能用来推断所有合伙人都有相同责任和管理权。

The typical limited partnership in this question separates the roles: the GP operates the business and has unlimited liability; LPs contribute capital and have limited liability but do not control daily operations. The word limited does not mean that every partner has the same liability or management rights.

其他选项为什么错 / Why the other choices fail

B 与 C 都把经营责任错误地分配给有限合伙人。

B and C both incorrectly assign operating responsibility to limited partners.

> GP 负责经营；LP 主要提供资本。
>
> The GP runs the business; LPs primarily provide capital.

Q39 所有者的有限责任

Limited liability of owners

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.39。

原题 / Original question

在哪一种企业形式中，所有者承担有限责任？

Owners have limited liability in a:

A 公司制企业。 / corporation.

B 独资企业。 / sole proprietorship.

C 普通合伙。 / general partnership.

正确答案 / Answer: A

公司制企业与股东在法律主体上分离，股东通常以其投入的资本为风险上限，而不需以个人资产无条件清偿全部企业债务。独资所有者和普通合伙人则承担无限责任。这是题库使用的基本组织形式比较。

A corporation is legally separate from its shareholders, whose exposure is generally limited to the capital invested rather than an unconditional obligation to repay all business debts from personal assets. Sole proprietors and general partners have unlimited liability. This is the basic organizational-form comparison used in the question bank.

其他选项为什么错 / Why the other choices fail

B 的业主与企业不分离；C 的普通合伙人承担无限责任。

B does not separate the owner from the business. C gives general partners unlimited liability.

> Corporation 对应股东有限责任。
>
> A corporation provides limited liability to its shareholders.

Q43 债权与股权的收益及损失边界

Return and loss limits for debt and equity

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.43。

原题 / Original question

关于公司制企业，下列哪项陈述最准确？

Which of the following statements about corporations is most accurate?

A 股东和债权人的上涨收益潜力都没有上限。 / Upside return potential is unlimited for both equity holders and debtholders

B 从投资者和发行人两个角度看，股权都比债务风险更高。 / Equity is riskier than debt from the perspective of both investors and issuers

C 股东和债权人的损失都以其初始投资为限。 / Losses for both equity holders and debtholders are limited to their initial investment

正确答案 / Answer: C

在本题通常假设的直接持有、未借款投资且无额外担保的情形下，股东与债权人最坏都可能损失全部投入，但不会因仅持有这些证券就再承担企业全部债务。该结论讨论最大投资损失，不代表两种证券发生损失的概率相同。

Under the usual assumption of an outright investment without borrowing or additional guarantees, either shareholders or debtholders can lose their entire investment, but merely holding the security does not make them liable for all company debts. This addresses the maximum investment loss, not equal probabilities of loss across the two securities.

其他选项为什么错 / Why the other choices fail

A 错：普通债权人的合同回报有上限。B 错：对发行人，必须还本付息的债务通常风险更高。

A is wrong because ordinary debt has limited contractual upside. B is wrong because compulsory debt payments generally make debt riskier for issuers.

> 最大损失可同为投入金额，但收益上限与风险视角不同。
>
> Maximum loss can equal the investment for both, while upside limits and risk perspectives differ.

Q45 利润双重征税

Double taxation of profits

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.45。

原题 / Original question

哪一种企业形式的所有者最可能担心利润被双重征税？

Double taxation of profits is most likely a concern for owners in:

A 公司制企业。 / corporations.

B 有限合伙。 / limited partnerships.

C 普通合伙。 / general partnerships.

正确答案 / Answer: A

在实行双重征税的制度下，公司利润先在企业层面缴税，随后派给股东的股息又可能在个人层面缴税。同一笔利润经历两个征税层级。原答案明确以存在此类制度的地区为前提，并非所有公司和所有地区都会如此。

Under a double-taxation system, profit is taxed at the corporate level and may then be taxed again when distributed as dividends to shareholders. The same profit passes through two tax layers. The supplied explanation explicitly refers to countries with such a system, rather than claiming that every company in every jurisdiction is treated this way.

其他选项为什么错 / Why the other choices fail

B 与 C 在题库的典型比较中，利润归到合伙人层面纳税，不具有相同的公司加股东两层结构。

In the question bank's typical comparison, B and C pass profits to the partners for taxation rather than imposing the same corporate-plus-shareholder structure.

> 双重征税 = 公司利润层面 + 股东分配层面。
>
> Double taxation means a corporate-profit layer plus a shareholder-distribution layer.

Q60 私人股权发行的持有期

Holding periods in private share offerings

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.60。

原题 / Original question

与公众公司的股份发行相比，私人公司的股份发行最可能：

Compared to those of public companies, share issuances of private companies most likely.

A 筹集更多资本。 / raise larger amounts of capital.

B 包含更多投资者。 / include a larger number of investors.

C 包含持有期更长的投资者。 / include investors with longer holding periods.

正确答案 / Answer: C

私人公司的股份通常缺乏活跃的公开二级市场，出售和转让更不方便，因此参与者通常需要接受更长的持有期。题库同时指出，私人发行通常面向较少投资者、筹资规模也较小。这些是典型比较，不是每笔发行都必然满足的数额限制。

Private shares usually lack an active public secondary market, making sale and transfer less convenient. Investors therefore normally need to accept longer holding periods. The supplied explanation also describes private offerings as typically involving fewer investors and smaller capital raises. These are general comparisons, not mandatory size limits for every offering.

其他选项为什么错 / Why the other choices fail

A 与 B 均与题库中的典型情况相反：私人发行通常融资较少、投资者较少。

A and B reverse the typical comparison: private offerings usually raise less capital from fewer investors.

> 退出较难，通常需要持有更久。
>
> More difficult exits generally require longer holding periods.

Q63 公众公司的典型特征

Typical characteristics of public corporations

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.63。

原题 / Original question

与私人公司相比，下列哪项是公众公司的典型特征？

Compared to private corporations, which of the following is a typical characteristic of public corporations?

A 政府是其股东。 / A government is a shareholder

B 股票在证券交易所上市。 / Shares are listed on a stock exchange

C 投资者之间转让所有权更困难。 / Transfer of ownership between investors is more difficult

正确答案 / Answer: B

本题库主要用股票是否在证券交易所上市来区分公众公司与私人公司。上市通常意味着可观察的市场交易和较方便的股权转让。Public 在这里不是“政府所有”的意思；原解析也提醒，不同地区对公众公司的法律定义可能存在差异。

The question bank mainly distinguishes public and private corporations by whether their shares are listed on a stock exchange. Listing generally provides observable trading and easier ownership transfers. Public here does not mean government-owned. The supplied explanation also notes that legal definitions of a public company can differ across jurisdictions.

其他选项为什么错 / Why the other choices fail

A 把 public 误解成国有；C 把私人公司通常较难转让的特征放到了公众公司。

A mistakes public for government-owned. C assigns the private-company tendency toward difficult transfers to public companies.

> 本题的 public 关键词是 listed，不是 government。
>
> In this question, public points to listed, not government-owned.

02 投资者与其他利益相关者

Investors and Other Stakeholders

这一单元先回答“谁的利益受到影响”，再判断冲突来自信息差还是风险偏好。记住股东委托董事会与管理层经营，债权人则主要依靠合同约束保护自己。

First identify whose interests are affected, then decide whether the conflict arises from unequal information or different risk preferences. Shareholders delegate to directors and managers, while creditors mainly protect themselves through contractual restrictions.

本单元 5 题 / 5 original items: Q19 · Q54 · Q55 · Q56 · Q58

先学知识点 / Learn the concepts

2.1 利益相关者的范围大于股东

Stakeholders extend beyond shareholders

股东是企业的所有者；利益相关者则包括受企业活动影响、或能影响企业活动的群体，例如股东、债权人、管理层、员工、客户、供应商和监管者。控股股东与少数股东都属于利益相关者。“包含所有股东与员工”可以正确，但不代表利益相关者只有这两类。

Shareholders own equity in the company. Stakeholders are the wider set of groups affected by, or able to affect, the company: shareholders, creditors, managers, employees, customers, suppliers and regulators, among others. Both controlling and minority shareholders belong to this group. A statement that stakeholders include all shareholders and employees can be correct without claiming that these are the only stakeholders.

对应原题 / Linked originals: Q55

2.2 委托代理关系与信息不对称

The principal-agent relationship and information asymmetry

在本组题的基本关系中，股东是委托人，董事与管理层是代理人：股东选董事，董事会聘任并监督 CEO，管理层负责执行。管理层更了解企业内部情况，可能作出有利于自己但不利于股东的决策。信息不对称是信息获取不相等，不是双方仅仅看法不同。

In the basic relationship tested here, shareholders are the principals, while directors and managers act as agents. Shareholders elect directors; the board appoints and oversees the CEO; management implements decisions. Managers usually know more about internal operations and may pursue their own interests at shareholders' expense. Information asymmetry means unequal access to information, rather than simply different opinions about the same information.

对应原题 / Linked originals: Q19 · Q56

2.3 股东与债权人：回报结构导致风险偏好冲突

Shareholders and creditors: conflicting risk preferences

股东可以分享项目成功的较大上涨收益；债权人的合同回报有限，却要承担项目失败后的信用损失。因此股东可能支持债权人不愿承担的风险。债务期限越长，企业改变业务、策略或管理行为的机会越多，债权人与股东发生冲突的潜在空间通常越大。

Shareholders can capture substantial upside when a risky project succeeds. Creditors have limited contractual upside but face credit losses if it fails. Shareholders may therefore favor risks that creditors would reject. Longer-term debt leaves more time for changes in the business, strategy and management behavior, generally increasing the potential for conflict between these two groups compared with short-term debt.

对应原题 / Linked originals: Q54

2.4 债务契约：约束发行人的行为

Debt covenants: constraining issuer behavior

债务契约条款（covenants）写在借款或债券协议中，约定发行人必须做或不得做的事项，目的是限制债权人的风险。看到 covenants，先联想到公司与债权人的关系。它与董事会对经理人的监督、股东的投票权是不同的治理工具。

Covenants are terms in loan or bond agreements that require an issuer to take certain actions or prohibit it from taking others. Their purpose is to constrain risks borne by creditors. When the question uses covenants, first think of the company-creditor relationship. This contractual tool differs from the board's supervision of management and from shareholders' voting rights.

对应原题 / Linked originals: Q58

最容易错在哪里 / Common traps

Stakeholder 不等于 shareholder；前者范围更广。

Stakeholder is broader than shareholder.

本组题的委托人是股东；不要因为董事会监督经理人，就把基本题中的董事会选为委托人。

Shareholders are the principals in this question set; the board's supervision of managers does not change the relationship being tested.

信息不对称题先找管理层与外部投资者；股东与债权人的典型冲突则先看风险偏好。

For information asymmetry, look first at management versus outside investors; for shareholder-creditor conflict, examine risk preferences.

股东委托经营，管理层掌握更多信息；债权人回报有限，因此用契约约束风险。

Shareholders delegate operations, managers possess more information, and creditors use covenants because their upside is contractually limited.

单元 02 原题练习与讲解

Original questions and worked explanations

Q19 股东与经理人的信息不对称

Information asymmetry between shareholders and managers

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.19。

原题 / Original question

对于一家上市公司，由信息不对称引起的利益冲突最可能发生在股东与下列哪一方之间？

With respect to a publicly listed company, a conflict of interest due to information asymmetry is most likely to occur between shareholders and:

A 债权人。 / creditors.

B 管理人员。 / managers.

C 客户。 / customers.

正确答案 / Answer: B

管理层直接参与经营，通常比外部股东更了解公司内部情况。这种信息优势可能让管理层作出偏向自身利益的决策，而股东难以及时发现和监督。因此本题最直接对应股东与管理层的委托代理冲突；并非说其他关系绝不存在信息差。

Managers participate directly in operations and normally know more about internal conditions than outside shareholders. This advantage can allow managers to pursue their own interests while making shareholder monitoring harder. The closest match is therefore the shareholder-manager agency conflict. This does not imply that information gaps are impossible in other stakeholder relationships.

其他选项为什么错 / Why the other choices fail

A 的典型冲突是股东与债权人的风险偏好不同；C 更常涉及价格、产品质量或安全等利益冲突。

A typically concerns different shareholder and creditor risk preferences. C more commonly concerns conflicts over prices, product quality or safety.

> 管理层知道更多、股东难监督：信息不对称。
>
> Managers know more and shareholders struggle to monitor: information asymmetry.

Q54 债务期限与股债冲突

Debt maturity and shareholder-creditor conflict

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.54。

原题 / Original question

债权人与股东之间发生利益冲突的可能性：

The potential for conflict between debtholders and shareholders is:

A 长期债务低于短期债务。 / lower for long-term debt than for short-term debt

B 长期债务与短期债务相同。 / the same for long-term debt and short-term debt.

C 长期债务高于短期债务。 / higher for long-term debt than for short-term debt.

正确答案 / Answer: C

长期债务锁定债权人资金的时间更长，在此期间公司可能改变业务、提高风险、调整策略或更换管理层。债权人的合同收益仍然有限，却可能承受新增风险。因此在其他条件相同的典型比较中，长期债务的股债冲突潜在空间更大。

Long-term debt leaves creditors exposed for longer while the company may change its business, take additional risks, revise strategy or replace management. Creditors' contractual upside remains limited even if their risk increases. In the typical comparison with other conditions unchanged, longer maturity therefore creates greater potential for shareholder-creditor conflict.

其他选项为什么错 / Why the other choices fail

A 把期限影响答反；B 忽略更长时间带来的行为及经营变化。

A reverses the effect of maturity. B ignores the greater scope for behavioral and business changes over time.

> 期限越长，未来改变风险的机会通常越多。
>
> Longer maturity usually leaves more time for risk-changing actions.

Q55 利益相关者的识别

Identifying stakeholders

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.55。

原题 / Original question

一家公司的利益相关者最可能包括：

A corporation's stakeholders most likely include:

A 仅股东。 / shareholders only.

B 仅控股股东。 / controlling shareholders only.

C 所有股东和所有员工。 / all shareholders and all employees.

正确答案 / Answer: C

利益相关者范围包含股东，也包含员工、债权人、客户及其他受企业活动影响的群体。C 正确地把全体股东与员工纳入其中，而且没有使用“仅”来排除其他群体。控股或少数股东身份不会决定一个人是否属于利益相关者。

Stakeholders include shareholders as well as employees, creditors, customers and other groups affected by company activities. C correctly includes all shareholders and employees without using only to exclude other groups. Being a controlling rather than a minority shareholder does not determine whether someone qualifies as a stakeholder.

其他选项为什么错 / Why the other choices fail

A 与 B 都用“仅”把范围缩得过窄，B 还错误排除了少数股东。

A and B use only to make the group too narrow. B also incorrectly excludes minority shareholders.

> 所有股东都是利益相关者；利益相关者并非只有股东。
>
> All shareholders are stakeholders, but not all stakeholders are shareholders.

Q56 委托人与代理人的识别

Identifying the principal and agents

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.56。

原题 / Original question

在公司制企业中，下列哪个利益相关者群体是委托代理关系中的委托人？

In a corporation, which of the following stakeholder groups is the principal in a principal-agent relationship?

A 股东 / Shareholders

B 董事会 / Board of directors

C 高级管理层 / Senior management

正确答案 / Answer: A

股东拥有企业权益，并委托董事和管理层保护及经营这些权益，因此股东是本题中的委托人。股东选举董事会，董事会再聘任和监督管理层。虽然组织内部可以形成多层委托关系，但本题考的是所有者与受托经营者的基本关系。

Shareholders own the equity and delegate protection and operation of their interests to directors and managers, making shareholders the principals in this question. They elect the board, which appoints and oversees management. Organizations can contain several layers of delegation, but the relationship tested here is the basic one between owners and those acting for them.

其他选项为什么错 / Why the other choices fail

B 与 C 在本题的股东委托关系中均属于代理人。

B and C act as agents in the shareholder-centered relationship tested here.

Principal 是委托权益的一方；本题为股东。

The principal delegates responsibility for an interest; here, that means shareholders.

Q58 债务契约保护债权人

Debt covenants protect creditors

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.58。

原题 / Original question

契约条款最可能存在于公司与下列哪一方之间？

Covenants are most likely to exist between a company and its:

A 债权人 / creditors

B 管理层。 / management.

C 董事会。 / board of directors.

正确答案 / Answer: A

本题的 covenants 指借款或债券协议中的契约条款，用来要求发行人采取某些行动，或禁止其采取某些行动。它们限制公司在债务存续期内给债权人增加风险的空间，因此最直接对应公司与债权人的关系。

Covenants here are terms in loan or bond agreements requiring the issuer to perform certain actions or prohibiting others. They constrain the company's ability to increase creditor risk during the life of the debt. The contractual relationship is therefore most directly between the company and its creditors.

其他选项为什么错 / Why the other choices fail

B 与 C 的治理关系主要涉及雇佣、授权和监督，不是本题所指的债务契约关系。

B and C mainly involve employment, delegation and oversight, rather than the debt-covenant relationship tested here.

> Covenants 先联想到 lender / creditor。
>
> Covenants should first bring lenders or creditors to mind.

03 公司治理、利益冲突与 ESG

Corporate Governance, Conflicts of Interest and ESG

公司治理考的是"谁监督谁、用什么工具、最终降低什么风险"。把董事会、各委员会、投票机制和 ESG 三类因素分别记清，再把良好治理与较低融资成本连接起来。

Corporate governance asks who monitors whom, which mechanisms are used, and which risks are reduced. Distinguish the board, its committees, voting arrangements and the three ESG categories, then connect effective governance with lower financing costs.

本单元 6 题 / 6 original items: Q22 · Q32 · Q38 · Q44 · Q47 · Q53

先学知识点 / Learn the concepts

3.1 良好治理为什么能降低债务成本

Why effective governance can lower debt costs

有效审计、透明报告和内部控制能减少舞弊、信息差与违约风险。债权人的资金和权利得到更好的保护后，通常愿意接受更低的要求回报，企业债务融资成本因而下降。治理的目标是提高监督与决策质量，不能简单等同于"管理层控制一定更少"或"经营效率下降"。

Effective audits, transparent reporting and internal controls can reduce fraud, information gaps and default risk. When creditors' funds and rights are better protected, they generally accept a lower required return, reducing the company's borrowing cost. Governance improves the quality of oversight and decisions. It should not be equated mechanically with less management control or reduced operating efficiency.

对应原题 / Linked originals: Q22

3.2 比较信息差：看谁能接触内部资料

Comparing information gaps: access to internal information

董事会通常可以取得重要内部资料并监督管理层；银行和私人贷款人通常能够与公司直接沟通并获得非公开资料。公众债券持有人主要依靠公开报告与评级，因此相对于管理层的信息差通常最大。判断题时比较三组选项的信息获取渠道，不要只比较谁投入的资金多。

Directors normally obtain significant internal information and oversee management. Banks and private lenders often communicate directly with the company and receive non-public information. Public bondholders rely mainly on public reports and credit ratings, so they generally face the largest information gap relative to management among these choices. Compare access channels, rather than assuming that the largest capital provider must be best informed.

对应原题 / Linked originals: Q32

3.3 投票与董事任期：四个名称不要混淆

Voting and board terms: four distinct mechanisms

代理投票（proxy voting）允许缺席股东授权他人代投；累积投票（cumulative voting）允许把可用票数集中给一个董事候选人；不同股类投票权不同属于双层或多层股权。交错任期董事会（staggered board）分批改选董事，有利于策略与监督的连续性，但这不表示它在所有治理维度上都更优。

Proxy voting lets an absent shareholder authorize someone else to vote. Cumulative voting permits available votes to be concentrated on one director candidate. Different voting rights across share classes describe dual-class or multiclass equity. A staggered board replaces directors in different election cycles, supporting continuity of strategy and oversight. That benefit does not imply that staggered boards are superior on every dimension of governance.

对应原题 / Linked originals: Q38 · Q53

3.4 董事会委员会：按职责关键词配对

Board committees: match the responsibility to the name

治理委员会负责治理制度与政策，包括利益冲突政策；风险委员会侧重企业风险状况、风险管理和风险偏好；薪酬委员会侧重董事、高管及员工薪酬政策。董事会整体聘任并监督 CEO；CEO 在董事会监督下执行策略。股东通常通过选举董事实施监督，而非直接承担日常监督。

The governance committee oversees governance structures and policies, including conflict-of-interest policies. The risk committee focuses on the risk profile, enterprise risk management and risk appetite. The remuneration committee oversees compensation policies. The board as a whole appoints and monitors the CEO, who implements strategy under board oversight. Shareholders normally exercise their influence through director elections rather than direct day-to-day supervision.

对应原题 / Linked originals: Q47 · Q53

3.5 ESG 分类：环境、人、治理机制

ESG classification: the environment, people and governance

环境（E）关注自然资源和污染等议题；社会（S）关注员工、人力资本、人权、福利和对社区的影响；治理（G）关注董事会组成、独立性、所有权与监督机制。第 44 题的三项恰好分别属于 G、E、S，按所涉及的对象分类即可。

Environmental factors concern matters such as natural resources and pollution. Social factors concern employees, human capital, human rights, welfare and community impacts. Governance factors concern board composition, independence, ownership and oversight mechanisms. In Question 44, the three choices map directly to G, E and S respectively. Classify the underlying issue instead of treating every management activity as a governance factor.

对应原题 / Linked originals: Q44

对照记忆 / Compare and remember

委员会 / Committee	关注点 / Focus	原题 / Source item
治理 / Governance	治理政策、利益冲突政策 Governance and conflict-of-interest policy	Q47
风险 / Risk	风险政策与管理监督 Risk policies and oversight	Q47
薪酬 / Remuneration	管理层薪酬与激励 Management compensation and incentives	Q47

最容易错在哪里 / Common traps

Proxy 是代投；cumulative 是集中票数；dual-class 是股类之间投票权不同。

Proxy means voting through a representative; cumulative means concentrating votes; dual-class means different rights across share classes.

CEO 的直接监督者是董事会，而不是由全体股东直接监督日常经营。

The board directly oversees the CEO; shareholders do not collectively supervise daily operations.

人力资本管理归 S；不能因为有 management 一词就选 G。

Human capital management belongs to S; the word management alone does not make an issue G.

治理降低风险，董事会监督 CEO，委员会按职责分工，ESG 按事项对象分类。

Governance reduces risk, the board oversees the CEO, committees divide responsibilities, and ESG factors are classified by the issue involved.

单元 03 原题练习与讲解

Original questions and worked explanations

Q22 公司治理与融资成本

Corporate governance and borrowing costs

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.22。

原题 / Original question

改善公司治理结构最可能导致：

An improvement in corporate governance structure most likely results in:

A 债务借款成本降低。 / lower cost of debt borrowing.

B 管理层的控制减少。 / less control by management.

C 经营效率下降。 / reduced operational efficiency.

正确答案 / Answer: A

更有效的审计、透明报告与内部控制可以降低信息差及违约风险。债权人的权益受到更好保护时，要求的风险补偿通常下降，企业借款成本因此降低。良好治理是提高监督和决策质量，不能简单概括为管理层控制减少。

Effective audits, transparent reporting and internal controls can reduce information gaps and default risk. Better protection for creditors normally lowers the compensation they require for lending, reducing borrowing costs. Governance improves the quality of oversight and decisions; its effect cannot be summarized simply as less management control.

其他选项为什么错 / Why the other choices fail

B 不是改善治理的必然、最准确结果；C 方向相反，有效控制通常有助于提升经营效率。

B is not the necessary or most precise consequence. C reverses the usual effect: effective controls can improve operating efficiency.

> 治理改善，风险降低，债权人要求回报可能下降。
>
> Better governance can reduce risk and creditors' required returns.

Q32 不同资本提供者的信息获取

Information access across capital providers

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.32。

原题 / Original question

与公司管理层相比，下列哪类利益相关者最可能面临最大的信息不对称？

Which of the following company stakeholders is most likely exposed to the greatest information asymmetry when compared to the company's management?

A 银行贷款人 / A bank lender

B 公众债券持有人 / A public debtholder

C 董事会成员 / A member of the board

正确答案 / Answer: B

公众债券持有人通常依靠公开财务报告和评级作出判断，较少直接取得企业内部资料。相比之下，银行贷款人通常与管理层有直接沟通渠道，董事会成员更能取得重要内部资料。因此这三类中，公众债券持有人的信息差通常最大。

Public bondholders generally rely on published financial information and credit ratings, with less direct access to internal records. Banks often have direct communication channels with management, while directors can obtain significant internal information. Among the three groups, public bondholders therefore normally face the greatest information gap relative to management.

其他选项为什么错 / Why the other choices fail

A 通常能够直接接触管理层及部分非公开信息；C 负有监督职责并可获取内部信息。

A generally has direct management access and some non-public information. C has oversight responsibilities and access to internal information.

比较信息渠道：董事会、银行通常比公众债券持有人接近管理层。

Compare access: directors and banks are generally closer to management than public bondholders.

Q38 代理投票与其他投票机制

Proxy voting versus other voting mechanisms

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.38。

原题 / Original question

代理投票最准确的描述是允许：

Proxy voting is best described as permitting:

A 多个股份类别拥有不同的投票权。 / different voting rights for multiple share classes.

B 股东将其所有票数投给一名董事候选人。 / shareholders to cast all of their votes for one board nominee.

C 股东在缺席会议时仍可对所持股份行使投票权。 / shareholders to vote their shares when absent from meetings.

正确答案 / Answer: C

代理投票允许无法亲自出席股东会议的股东，授权他人代表其投票。它解决的是“本人不到场如何行使表决权”，而不是怎样在候选人之间分配票数，或不同股份类别分别拥有多少票。

Proxy voting allows a shareholder who cannot attend a meeting to authorize another person to vote on the shareholder's behalf. It addresses how voting rights are exercised during absence. It does not determine how votes are allocated among candidates or how many votes belong to different share classes.

其他选项为什么错 / Why the other choices fail

A 描述双层或多层股权；B 描述累积投票。

A describes dual-class or multiclass equity. B describes cumulative voting.

> Proxy = 由他人代投；cumulative = 集中票数。
>
> Proxy means voting through another person; cumulative means concentrating votes.

Q44 ESG 中的社会因素

Social factors within ESG

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.44。

原题 / Original question

在 ESG 实施中，下列哪项最可能属于社会因素？

With respect to ESG implementation, which of the following is most likely a social factor?

A 董事会组成 / Board composition

B 污染预防 / Pollution prevention

C 人力资本管理 / Management of human capital

正确答案 / Answer: C

社会因素关注人及其福利，包括员工、人力资本、人权、工作条件及社区影响。人力资本管理直接涉及员工，因此属于 S。分类应看管理的对象，而不能因为选项出现"管理"一词，就把它归为治理因素。

Social factors concern people and their welfare, including employees, human capital, human rights, working conditions and community impacts. Human capital management directly concerns employees and therefore belongs to S. Classify the subject being managed; the presence of the word management does not by itself make the issue a governance factor.

其他选项为什么错 / Why the other choices fail

A 属于治理因素 G；B 属于环境因素 E。

A is a governance factor, G. B is an environmental factor, E.

> 人力资本选 S；董事会选 G；污染选 E。
>
> Human capital is S; boards are G; pollution is E.

Q47 治理委员会的职责

Responsibilities of the governance committee

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.47。

原题 / Original question

董事会的下列哪个委员会监督公司利益冲突政策的制定？

Which of the following committees of a board of directors oversees the development of the company's conflict of interest policy?

A 风险委员会 / Risk committee

B 治理委员会 / Governance committee

C 薪酬委员会 / Remuneration committee

正确答案 / Answer: B

利益冲突政策属于公司治理政策，用于规范公司内部的行为及利益关系。治理委员会监督良好治理制度的建立，因此与这项职责最直接对应。此题的关键是识别"制定治理政策"，而非把任何包含风险的事项都归给风险委员会。

A conflict-of-interest policy is a governance policy that regulates conduct and relationships within the company. The governance committee oversees the development of sound governance structures and practices, making it the direct match. The key is identifying responsibility for governance policy, rather than assigning every risk-related issue to the risk committee.

其他选项为什么错 / Why the other choices fail

A 侧重风险状况、风险管理与风险偏好；C 侧重薪酬制度与绩效报酬。

A focuses on the risk profile, risk management and risk appetite. C focuses on compensation arrangements and performance-related remuneration.

> 利益冲突政策归治理委员会。
>
> Conflict-of-interest policy belongs to the governance committee.

Q53 交错任期董事会与监督层级

Staggered boards and oversight responsibilities

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.53。

原题 / Original question

下列哪项陈述最准确？

Which of the following is most accurate?

A 私人贷款人的风险偏好相近。 / Risk appetites are similar among private lenders

B 交错任期董事会能使策略实施和监督保持连续性。 / Staggered boards provide continuous implementation of strategy and oversight

C 公司的 CEO 在股东监督下负责执行公司策略。 / A company's CEO is responsible for implementing the company's strategy under the oversight of the company's shareholders

正确答案 / Answer: B

交错任期董事会分批改选董事，避免全部成员同时更换，因此有助于保留经验并维持策略与监督的连续性。这是该安排的一项优点，不代表其没有其他治理取舍。题目同时考查 CEO 的直接监督层级是董事会。

A staggered board replaces directors in different election cycles instead of changing every member at once. This helps retain experience and maintain continuity of strategy and oversight. It is a benefit of the arrangement, not a claim that it has no governance trade-offs. The question also tests that the board directly oversees the CEO.

其他选项为什么错 / Why the other choices fail

A 错：不同私人贷款人的风险偏好差异可很大。C 错：CEO 直接在董事会监督下执行策略。

A is wrong because private lenders can have widely differing risk appetites. C is wrong because the CEO implements strategy under board oversight.

> Staggered board 保持连续性；监督 CEO 的是 board。
>
> Staggered boards support continuity; the board oversees the CEO.

04 营运资本与流动性

Working Capital and Liquidity

这组原题只考两件事：现金为什么紧张，以及企业从哪里取得流动性。先判断是收款变慢还是付款压力增加，再判断资金来自日常渠道还是应急措施。

These source questions test two distinctions: why cash becomes tight, and where liquidity comes from. First distinguish delayed receipts from greater payment pressure; then distinguish routine funding from emergency measures.

本单元 5 题 / 5 original items: Q10 · Q15 · Q31 · Q40 · Q46

先学知识点 / Learn the concepts

4.1 收款拖累与付款拉动：先看现金方向

Drags and pulls: identify the direction of cash flow

Drag on liquidity 是现金流入变慢：未收回的应收账款、过时存货都会让现金迟迟无法回笼。Pull on liquidity 是付款提前或可用信用减少：提前付供应商、授信不足、信用额度下降，都会迫使企业更早动用现金。口诀：drag = 收得慢；pull = 付得早或借得少。

A drag on liquidity delays cash receipts: uncollected receivables and obsolete inventory keep cash tied up. A pull on liquidity accelerates payments or restricts available credit: early payments to vendors, insufficient credit lines, and reduced credit limits force earlier use of cash. Memory cue: drag = slower receipts; pull = earlier payments or less credit.

对应原题 / Linked originals: Q10 · Q15

4.2 主要流动性来源：日常可取得的资金

Primary liquidity: readily accessible routine resources

主要来源包括现金及近似现金资产、正常短期融资和有效的现金管理。高效收款、集中管理现金，可减少资金被困在经营流程中。判断关键是通常能够以较低成本取得，且不需要明显改变正常经营。原题中的 short-term funds 和 effective cash management 都属于此类。

Primary sources include cash and near-cash assets, routine short-term funding, and effective cash management. Efficient collections and cash coordination release funds tied up in operating processes. The key is relatively low-cost access without materially disrupting normal operations. The source questions classify short-term funds and effective cash management as primary sources.

对应原题 / Linked originals: Q31 · Q40 · Q46

4.3 次要流动性来源：需要改变现状的应急措施

Secondary liquidity: emergency measures that change the status quo

应急或非日常资产变现、重谈债务合同以延期还本、申请破产保护及重组，属于题库中的次要来源。这类措施可能代价较高，并改变企业的财务或经营状况。这里将破产保护称为流动性工具，是因为重组过程可能缓解付款压力；不等于提出申请就自动获得一笔现金。

Emergency or nonroutine asset liquidation, renegotiating debt to defer principal, and bankruptcy protection or reorganization are secondary sources in these questions. They may be costly and alter the company's financial or operating position. Bankruptcy protection is described as a liquidity tool because reorganization may relieve payment pressure; filing does not itself automatically produce cash.

对应原题 / Linked originals: Q31 · Q40 · Q46

对照记忆 / Compare and remember

类别 / Type	直接线索 / Direct clue	原题 / Items
Drag / 收款拖累	应收账款未收回；存货过时 Uncollected receivables; obsolete inventory	Q10, Q15
Pull / 付款或信用压力	提前付款；信用额度减少 Early payments; reduced credit limits	Q10, Q15
Primary / 主要来源	现金管理；正常短期资金 Cash management; routine short-term funds	Q31, Q40, Q46
Secondary / 次要来源	资产变现；重谈债务；破产重组 Asset liquidation; debt renegotiation; reorganization	Q31, Q40, Q46

最容易错在哪里 / Common traps

不要把所有现金紧张都叫 drag：信用额度减少是 pull。

Do not call every cash shortage a drag: a reduction in credit limits is a pull.

资产出售虽然带来现金，但在这组原题的分类中属于次要来源。

Asset liquidation produces cash but is classified as a secondary source in these questions.

正常短期融资与为缓解困难而重谈债务合同，分类不同。

Routine short-term funding and renegotiating distressed debt terms belong to different categories.

收得慢 = drag；付得早或信用收紧 = pull。日常现金、短期资金、现金管理 = primary；卖资产、重谈债务、破产重组 = secondary。

Slower receipts = drag; earlier payments or tighter credit = pull. Routine cash, short-term funds, and cash management = primary; asset sales, debt renegotiation, and bankruptcy reorganization = secondary.

单元 04 原题练习与讲解

Original questions and worked explanations

Q10 付款拉动与信用收紧

Pulls and tighter credit

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.10。

原题 / Original question

以下哪项属于对公司流动性的拉动因素（pull）？

Which of the following is a pull on a company's liquidity?

A 过时存货 / Obsolete inventory

B 信用额度下降 / Reduced credit limits

C 未收回的应收账款 / Uncollected receivables

正确答案 / Answer: B

信用额度下降意味着企业不能继续依靠原来的信用安排延后付款，需要更早动用自有现金，因此属于 pull。

Reduced credit limits restrict the ability to defer payments through existing credit arrangements, forcing earlier use of the company's cash. This is a pull on liquidity.

其他选项为什么错 / Why the other choices fail

A：过时存货使变现与收款变慢，属于 drag。C：应收账款未收回也使现金流入延迟，属于 drag。

A: obsolete inventory delays conversion into cash, so it is a drag. C: uncollected receivables delay cash inflows and are also a drag.

> 信用收紧看作付款端压力：pull。
>
> Treat tighter credit as payment-side pressure: a pull.

Q15 收款拖累

Drags on receipts

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.15。

原题 / Original question

以下哪项最适合归类为流动性拖累因素（drag）？

Which of the following is best categorized as a drag on liquidity?

A 信用额度不足 / Insufficient credit lines

B 未收回的应收账款 / Uncollected receivables

C 提前向供应商付款 / Early payments to vendors

正确答案 / Answer: B

应收账款本应转化为现金却迟迟未收回，减少可用资金；它直接拖慢现金流入。

Receivables that remain uncollected fail to turn into available cash on time. They directly delay cash receipts.

其他选项为什么错 / Why the other choices fail

A：授信不足限制可延后付款的能力，属于 pull。C：提前付款让现金更早流出，也属于 pull。

A: insufficient credit lines limit payment deferral and create a pull. C: paying early accelerates cash outflows and is also a pull.

> Drag 记“收得慢”，不要只看是否造成资金紧张。
>
> Remember drag as slower receipts, not simply any source of cash pressure.

Q31 主要流动性来源

Primary sources of liquidity

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.31。

原题 / Original question

关于流动性管理，下列哪项活动最可能使公司获得主要流动性来源？

With respect to liquidity management, which of the following activities most likely provides access to a primary source of liquidity?

A 出售过时资产 / Liquidating obsolete assets

B 建立有效的现金管理系统 / Creating an effective cash management system

C 协商新的债务合同以推迟本金偿还 / Negotiating new debt contracts that delay principal repayment

正确答案 / Answer: B

有效现金管理减少资金闲置与周转过程中的占用，使日常可用现金增加，属于主要流动性来源。

Effective cash management reduces idle balances and cash tied up in operating processes, improving access to routine liquidity. It is a primary source.

其他选项为什么错 / Why the other choices fail

A：出售资产属于次要来源。C：为延期还本而重谈债务合同属于次要来源，会改变原有融资安排。

A: asset liquidation is a secondary source. C: renegotiating debt to defer principal is secondary because it changes the existing financing arrangement.

> 日常现金管理 = primary；卖资产、改债务条款 = secondary。
>
> Routine cash management = primary; asset sales and debt renegotiation = secondary.

Q40 主要与次要来源的差异

Distinguishing primary and secondary sources

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.40。

原题 / Original question

关于流动性来源，下列哪项表述最准确？

Which of the following statements about sources of liquidity is most accurate?

A 申请破产被视为次要流动性来源。 / Filing for bankruptcy is considered a secondary source of liquidity.

B 次要流动性来源的成本低于主要来源。 / Secondary sources of liquidity have a lower cost than primary sources of liquidity.

C 使用主要流动性来源会影响公司的财务和经营状况。 / Using a primary source of liquidity impacts the financial and operating positions of a company.

正确答案 / Answer: A

答案将破产保护及重组列为次要来源，因为它们可能缓解支付压力，使公司在重组期间继续经营。这是流动性管理分类，不表示申请本身必然带来现金流入。

The supplied answer classifies bankruptcy protection and reorganization as secondary sources because they may relieve payment pressure and allow operations to continue during restructuring. This classification does not imply that filing itself necessarily generates a cash inflow.

其他选项为什么错 / Why the other choices fail

B：主要来源通常较易取得、成本较低，次要来源可能代价更高。C：题目强调主要来源通常不明显影响正常经营；可能改变财务或经营状况是次要来源的特点。

B: primary sources are generally more accessible and lower-cost; secondary sources may be more expensive. C: the intended distinction is that primary sources generally do not disrupt normal operations, whereas secondary sources may change financial or operating positions.

本题按资料分类：破产重组属于 secondary。

Under the source classification, bankruptcy reorganization is secondary.

Q46 资产变现的分类

Classification of asset liquidation

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.46。

原题 / Original question

下列哪项是公司次要流动性来源的例子？

Which of the following is an example of a secondary source of liquidity for a company?

A 短期资金 / Short-term funds

B 出售资产变现 / Liquidating assets

C 有效的现金管理 / Effective cash management

正确答案 / Answer: B

出售资产可取得现金，但可能需要折价并改变正常经营或资产配置，因此在原题中归类为次要来源。

Liquidating assets raises cash but may require a discount and change operations or the asset base, so the question classifies it as a secondary source.

其他选项为什么错 / Why the other choices fail

A：正常短期资金属于主要来源。C：有效现金管理也属于主要来源。

A: routine short-term funding is a primary source. C: effective cash management is also a primary source.

> 看到 liquidating assets，识别为 secondary source。
>
> Recognize liquidating assets as a secondary source.

05 资本投资与资本配置

Capital Investments and Capital Allocation

资本配置的核心是：用风险相称的折现率，判断未来税后增量现金流能否补偿今天的投入。先识别项目目的，再计算价值，最后把管理层未来可以改变决策的实物期权计入。

Capital allocation asks whether future incremental after-tax cash flows compensate for today's investment at a risk-appropriate discount rate. Identify the project's purpose, measure its value, and then account for real options that allow management to adapt later.

本单元 12 题 / 12 original items: Q20 · Q23 · Q27 · Q36 · Q41 · Q42 · Q48 · Q51 · Q62 · Q64 · Q65 · Q67

先学知识点 / Learn the concepts

5.1 项目分类看目的：维持、扩张还是合规

Classify the purpose: maintain, expand, or comply

Going concern projects 维持现有业务和经营规模；expansion projects 扩大业务，通常需要更多资本、更多时间，并面对更大不确定性；compliance projects 为满足监管、安全等外部要求而进行。原题第 65 题虽然投资“新技术”，但目的是符合安全标准，所以属于合规项目。

Going concern projects maintain existing operations and business size. Expansion projects enlarge the business and typically require more capital and time with greater uncertainty. Compliance projects meet external requirements such as regulation or safety standards. In Q65, the investment uses new technology, but its purpose is to meet safety standards, so it is a compliance project.

对应原题 / Linked originals: Q20 · Q65

5.2 决策基础：税后增量现金流与机会成本

Decision inputs: incremental after-tax cash flows and opportunity cost

关注“接受项目后会改变的未来现金流”，纳入税收和放弃最佳替代用途的机会成本；已发生且无法改变的沉没成本不影响当前决策。不要只为提高短期 EPS、净利润或 ROE 而选项目：会计数字短期下降，不代表项目 NPV 为负。第 23 题按资料给定的简化口径，把税前现金流乘以 (1 - 税率) 后再折现。

Focus on future cash flows that change if the project is accepted, including taxes and the opportunity cost of the best forgone alternative. Sunk costs already incurred and unaffected by the decision are irrelevant. Do not select projects solely to improve short-run EPS, net income, or ROE: a temporary accounting decline does not imply a negative NPV. Q23 uses the source's simplified convention of multiplying pretax cash flow by (1 - tax rate) before discounting.

```
Relevant CF = future incremental after-tax CF
```

对应原题 / Linked originals: Q23 · Q36 · Q64

5.3 NPV、IRR 与互斥项目：价值金额优先

NPV, IRR, and mutually exclusive projects: prioritize value added

NPV = 未来现金流现值减初始支出；IRR = 使 NPV 等于零的折现率。对于先投入、之后只有正现金流的常规项目，IRR 高于要求回报率对应正 NPV。独立项目可按是否创造价值逐个判断；互斥项目只能选一个，NPV 与 IRR 排序冲突时，按风险适当的折现率计算并优先选择 NPV 较高者。要求回报率也称资金机会成本或 hurdle rate。

NPV is the present value of future cash flows less the initial outlay; IRR is the discount rate that makes NPV zero. For a conventional project with an initial outflow followed only by positive cash flows, IRR above the required return corresponds to positive NPV. Independent projects can be evaluated individually; mutually exclusive projects permit only one choice. If NPV and IRR rankings conflict, use risk-appropriate discount rates and prefer the higher NPV. The required return is also called the opportunity cost of funds or hurdle rate.

```
NPV = CF0 + sum[CFt / (1 + r)^t]; NPV at r = IRR is 0
```

对应原题 / Linked originals: Q23 · Q48 · Q62 · Q64 · Q67

5.4 实物期权分类：何时投、投多大、如何经营

Real-option categories: when to invest, how much, and how to operate

Timing option 允许推迟或分阶段决定投资；sizing option 改变规模，包括扩张或放弃；flexibility option 调整现有产能下的运营，例如更换投入品或调整生产。第 41 题“经营结果不佳后放弃项目”，在答案采用的分类中属于 sizing option；第 51 题更换成本更低的投入品，属于运营灵活性。

A timing option allows investment to be delayed or sequenced. A sizing option changes scale, including expansion or abandonment. A flexibility option changes operations within existing capacity, such as switching inputs or adjusting production. Under the classification used in the supplied answers, abandoning a poorly performing project in Q41 is a sizing option. Switching to a lower-cost input in Q51 is operating flexibility.

对应原题 / Linked originals: Q27 · Q41 · Q51

5.5 实物期权价值与放弃决策：比较未来价值

Option value and abandonment: compare future alternatives

若期权取得成本尚未计入原 NPV，总价值等于基础 NPV 加期权价值，再减期权成本。是否放弃项目，要在同一时点比较：继续经营的未来现金流现值，与放弃后可取得的净现金流。如果后者更大，应放弃；两者相等时，在该简化比较下没有严格价值优势。已经花掉的钱不能成为继续亏损投资的理由。

If the option-acquisition cost is not already included in the base NPV, total value equals base NPV plus option value less option cost. To decide whether to abandon, compare at the same date the present value of continuing cash flows with net cash proceeds from abandonment. Abandon if the latter is larger; equality creates no strict value advantage in this simplified comparison. Money already spent does not justify continuing an unattractive investment.

```
Expanded NPV = base NPV + option value - option cost
```

对应原题 / Linked originals: Q27 · Q51

5.6 ROIC 是经营表现；资本成本是回报要求

ROIC measures operating performance; cost of capital is the required return

ROIC 衡量投入资本转化为税后经营利润的效率。常见表达是税后经营利润 NOPAT 除以平均投入资本。资本成本是投资者要求的回报，用作折现与比较基准；hurdle rate 是项目需达到的回报门槛。看到“converted into after-tax operating profits”，应想到 ROIC，而不是成本或门槛。

ROIC measures how efficiently invested capital generates after-tax operating profit. A common expression is NOPAT divided by average invested capital. Cost of capital is the return required by capital providers and serves as a discounting and comparison benchmark; the hurdle rate is the project's required return threshold. The phrase “converted into after-tax operating profits” points to ROIC, not a financing cost or threshold.

```
ROIC = NOPAT / average invested capital
```

对应原题 / Linked originals: Q42

对照记忆 / Compare and remember

比较 / Comparison	判断 / Decision
常规项目 / Conventional project	NPV(r) > 0 implies IRR > r; NPV(r) < 0 implies IRR < r. 先流出、之后为正流入时适用。
互斥项目 / Mutually exclusive projects	风险适当折现率下优先较高 NPV；不能全部接受。 Prefer higher NPV at appropriate discount rates; do not accept both.
放弃 / Abandonment	继续的现金流现值 < 放弃净所得时，选择放弃。 Abandon when continuation PV is below abandonment proceeds.

最容易错在哪里 / Common traps

NPV 先用税后现金流，再扣初始支出；现金流现值不是 NPV。

Use after-tax cash flows and deduct the initial outlay; the present value of inflows alone is not NPV.

互斥项目不能因为两个 IRR 都超过门槛就全部接受。

Mutually exclusive projects cannot both be accepted merely because both IRRs exceed the hurdle rate.

不等额现金流用逐期现金流处理；不要把第 1 年的现金流错误地重复加到第 2 年。

Enter unequal cash flows separately; do not mistakenly repeat Year 1 cash flow in Year 2.

实物期权成本要减，不是加；放弃项目在本资料中属于 sizing option。

Subtract option cost rather than adding it; abandonment is a sizing option in the supplied classification.

目的决定项目类别；税后增量现金流决定价值；互斥冲突优先 NPV；期权价值要扣取得成本；放弃与继续比较的是今天起的未来价值。

Purpose determines project type; incremental after-tax cash flows determine value; NPV governs conflicting rankings for mutually exclusive projects; deduct option-acquisition cost; compare abandonment and continuation using future value from today.

单元 05 原题练习与讲解

Original questions and worked explanations

Q20 扩张与维持经营

Expansion versus going concern projects

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.20。

原题 / Original question

与维持持续经营的项目相比，扩张项目最可能涉及：

Compared to going concern projects, expansion projects most likely involve:

A 仅更大的不确定性。 / greater uncertainty only.

B 仅更多的资本投入。 / greater amounts of capital only.

C 更大的不确定性和更多的资本投入。 / both greater uncertainty and greater amounts of capital.

正确答案 / Answer: C

扩张改变业务规模，相比维持现有经营，通常既需要更多资本，也面对更大不确定性。

Expansion changes business size and typically requires both more capital and greater exposure to uncertainty than maintaining existing operations.

其他选项为什么错 / Why the other choices fail

A：遗漏更多资本投入。B：遗漏更大的不确定性。两个 only 都使表述不完整。

A omits the greater capital requirement. B omits greater uncertainty. The word only makes each incomplete.

> Expansion：通常规模更大、资本更多、不确定性更高。
>
> Expansion typically means greater scale, more capital, and higher uncertainty.

Q23 税后现金流与年金 NPV

After-tax cash flow and annuity NPV

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.23。

原题 / Original question

一名分析师收集了某公司资本投资的以下信息：

An analyst gathers the following information about a company's capital investment:

Item / 项目	Value / 数值
Initial cash outlay / 初始现金支出	$90 million
Annual before-tax cash flows (year-end) for Year 1 through Year 6 / 第 1 至第 6 年每年年末税前现金流	$50 million
Marginal tax rate / 边际税率	15%
Required rate of return / 要求回报率	12%

该投资的净现值最接近：

The net present value of the investment is closest to:

A 85 百万美元。 / $85 million.

B 116 百万美元。 / $116 million.

C 175 百万美元。 / $175 million.

正确答案 / Answer: A

按原题给定的简化税收处理，先把每年税前 5,000 万美元转为税后 4,250 万美元，再对 6 次年末现金流折现，最后扣除初始 9,000 万美元。NPV 约为 8,473 万美元，最接近 8,500 万美元。

Using the source's simplified tax treatment, convert the annual $50 million pretax inflow to $42.5 million after tax, discount six year-end payments, and deduct the $90 million initial outlay. NPV is about $84.73 million, closest to $85 million.

逐步计算 / Worked solution

所有金额以下均以百万美元表示；计算每年税后现金流。

All amounts below are in USD millions; calculate the annual after-tax cash flow.

```
CF = 50 * (1 - 0.15) = 42.5
```

6 次年末等额现金流是普通年金，以 12% 折现。

The six equal year-end payments form an ordinary annuity discounted at 12%.

```
PV = 42.5 * [1 - (1.12)^(-6)] / 0.12 = 174.7348
```

减去初始投入，与三个原选项比较。

Subtract the initial investment and compare with the original choices.

```
NPV = 174.7348 - 90 = 84.7348; closest to 85 (A)
```

其他选项为什么错 / Why the other choices fail

B：未扣税，直接折现每年 50，再减 90，会得到约 115.57 百万美元。C：只算出税后现金流现值约 174.73 百万美元，忘记扣初始投入。

B discounts the pretax 50 and subtracts 90, producing about $115.57 million. C uses the after-tax inflow present value of about $174.73 million but forgets the initial outlay.

> 三步顺序：税后化、折现、减初始支出。
>
> Use this order: adjust for tax, discount, subtract the initial outlay.

Q27 放弃期权的行权条件

When to exercise an abandonment option

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.27。

原题 / Original question

如果继续投资所产生现金流的现值满足以下哪项条件，公司应行使该投资的放弃期权？

A company should exercise the abandonment option on an investment if the present value of the cash flows from continuing the investment is:

A 低于放弃投资所取得的现金流。 / lower than the cash flow from abandoning the investment.

B 等于放弃投资所取得的现金流。 / the same as the cash flow from abandoning the investment.

C 高于放弃投资所取得的现金流。 / greater than the cash flow from abandoning the investment.

正确答案 / Answer: A

从当前决策时点比较两个选择：放弃能取得的现金，比继续经营现金流的现值更多时，放弃增加价值。

Compare the two alternatives at the current decision date. If the cash obtained from abandonment exceeds the present value of continuing, abandonment increases value.

其他选项为什么错 / Why the other choices fail

B：两者相等时没有严格价值优势，不能据此要求放弃。C：继续价值更高，应继续而非放弃。

B: equality creates no strict value advantage and does not compel abandonment. C: continuation is worth more, so abandoning is not preferred.

> 放弃条件：放弃所得 > 继续经营现值。
>
> Abandon when abandonment proceeds exceed continuation value.

Q36 资本配置陷阱

Capital allocation pitfalls

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.36。

原题 / Original question

以以下哪项作为投资决策依据，会被视为资本配置陷阱？

Which of the following is considered a capital allocation pitfall? Basing investment decisions on:

A 机会成本。 / opportunity costs.

B 税后现金流。 / after-tax cash flows.

C 短期会计数字。 / short-run accounting numbers.

正确答案 / Answer: C

短期 EPS、净利润或 ROE 可能受会计确认与项目投入时点影响。只追求这些数字，会错过创造长期价值的正 NPV 项目。

Short-run EPS, net income, or ROE can be influenced by accounting recognition and the timing of investment. Focusing only on them can reject positive-NPV projects that create long-term value.

其他选项为什么错 / Why the other choices fail

A：机会成本是应纳入的经济成本。B：税后现金流是正确决策基础。两者都不是陷阱。

A: opportunity cost is a relevant economic cost. B: after-tax cash flow is an appropriate decision input. Neither is a pitfall.

> 选创造价值的项目，不要只看短期利润是否上升。
>
> Evaluate value creation, not merely a short-run rise in reported profit.

Q41 放弃属于规模期权

Abandonment as a sizing option

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.41。

原题 / Original question

在进行资本投资后，一家公司因项目财务表现不佳而放弃该项目。单看这一行为，最能体现行使哪类期权？

Subsequent to making a capital investment, a company reacts to poor financial results from the project by abandoning it. This action alone best exemplifies the exercise of a:

A 规模期权。 / sizing option.

B 时机期权。 / timing option

C 灵活性期权。 / flexibility option.

正确答案 / Answer: A

按照答案采用的实物期权分类，扩张和放弃都改变项目规模，属于 sizing options。放弃可理解为将项目规模缩减至零。

Under the supplied classification, both expansion and abandonment change project scale and are sizing options. Abandonment can be understood as reducing project scale to zero.

其他选项为什么错 / Why the other choices fail

B：时机期权是推迟或分阶段投资。C：灵活性期权是对现有经营方式作调整，而原题明确是放弃项目。

B: timing options defer or sequence investment. C: flexibility options adjust operations, whereas the question explicitly describes abandoning the project.

> 本资料：abandonment / expansion = sizing。
>
> In this material: abandonment / expansion = sizing.

Q42 ROIC 的含义

Meaning of ROIC

来源 / Source: 题库 PDF p.36（章节 p.7）；答案 PDF p.42。

原题 / Original question

衡量资本转化为税后经营利润的效率的指标是：

A measure of how effectively capital is converted into after-tax operating profits is the:

A 最低要求回报率。 / hurdle rate.

B 资本成本。 / cost of capital.

C 投入资本回报率。 / return on invested capital.

正确答案 / Answer: C

ROIC 衡量管理层利用投入资本产生税后经营利润的效率，是经营回报表现指标。

ROIC measures management's effectiveness in generating after-tax operating profit from invested capital. It is a measure of operating return performance.

其他选项为什么错 / Why the other choices fail

A：hurdle rate 是项目应达到的回报门槛。B：资本成本是资金提供者要求的回报，属于基准而非经营效率结果。

A: the hurdle rate is a project's required return threshold. B: cost of capital is the return required by capital providers, a benchmark rather than an operating-efficiency outcome.

> 税后经营利润 / 投入资本，想到 ROIC。
>
> After-tax operating profit relative to invested capital points to ROIC.

Q48 不等额现金流的 IRR

IRR for unequal cash flows

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.48。

原题 / Original question

一家公司的要求回报率为 12%，正在考虑一项具有以下现金流的资本项目（金额单位为百万）：

A company with a required rate of return of 12% is considering a capital project with the following cash flows (in millions):

	Initial Outlay / 初始支出	Year 1 / 第 1 年	Year 2 / 第 2 年
Cash flow / 现金流	-£150	£8	£175

该项目预期的内部收益率最可能：

The expected IRR for this project is most likely.

A 低于 12%。 / less than 12%.

B 等于 12%。 / equal to 12%.

C 高于 12%。 / greater than 12%.

正确答案 / Answer: A

逐期输入初始 -150、第 1 年 8、第 2 年 175，可求得 IRR 约为 10.71%，低于 12%。也可以直接计算按 12% 折现的 NPV 为负；本题是初始流出后全部为正流入的常规现金流，因此 IRR 必低于 12%。

Entering -150 initially, 8 in Year 1, and 175 in Year 2 gives an IRR of about 10.71%, below 12%. Alternatively, NPV discounted at 12% is negative. Because this is a conventional pattern of an initial outflow followed only by positive inflows, the IRR must be below 12%.

逐步计算 / Worked solution

以下金额以百万英镑表示，写出逐期现金流方程。

Amounts below are in GBP millions; write the cash-flow equation by period.

```
0 = -150 + 8 / (1 + IRR) + 175 / (1 + IRR)^2
```

求得内部收益率并与要求回报率比较。

Solve for the internal rate of return and compare it with the required return.

```
IRR = 10.7119% < 12% (A)
```

快速核对：以 12% 折现得到负 NPV；在本题的常规现金流条件下，说明 IRR 低于 12%。

Quick check: discounting at 12% gives a negative NPV, implying IRR below 12% for this conventional cash-flow pattern.

```
NPV(12%) = -150 + 8 / 1.12 + 175 / 1.12^2 = -3.3482
```

其他选项为什么错 / Why the other choices fail

B：12% 是要求回报率，不是自动等于 IRR。C：若误设每年 PMT = 8 且第 2 年 FV = 175，会把第 2 年现金流错误增加 8。

B: 12% is the required return and is not automatically the IRR. C: setting an annual PMT of 8 and Year 2 FV of 175 mistakenly adds another 8 to Year 2 cash flow.

> 判断相对门槛时，可先算该门槛下的 NPV 正负。
>
> To compare IRR with a hurdle rate, first check the sign of NPV at that hurdle rate.

Q51 包含实物期权的项目价值

Project value including a real option

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.51。

原题 / Original question

一项新项目的预计净现值为 -0.20 百万美元。额外投入 0.40 百万美元，可使管理层未来灵活地改用成本更低的投入品。如果该期权的估计价值为 0.80 百万美元，则包含该期权后的项目价值为：

The NPV of a new project is expected to be-$0.20 million. An incremental investment of $0.40 million would give management the flexibility to switch to a lower cost input in the future. If this option has an estimated value of $0.80 million, the value of the project including the option is :

A 0.20 百万美元。 / $0.20 million.

B 0.40 百万美元。 / $0.40 million.

C 1.00 百万美元。 / $1.00 million.

正确答案 / Answer: A

原项目已有负 NPV，必须保留；再加期权带来的价值，并扣除为获得期权而支付的新增投入。

Retain the original negative NPV, add the value created by the option, and deduct the incremental investment needed to acquire it.

逐步计算 / Worked solution

以下金额均为百万美元，保留原始项目的负净现值。

All amounts below are in USD millions; retain the negative base-project NPV.

```
Base NPV = -0.20
```

加入期权净贡献。

Add the net contribution from the option.

```
Net option contribution = 0.80 - 0.40 = 0.40
```

汇总项目总价值。

Combine them to obtain total project value.

```
Expanded NPV = -0.20 + 0.80 - 0.40 = 0.20 (A)
```

其他选项为什么错 / Why the other choices fail

B：只算期权价值减期权成本，遗漏原项目 -0.20 百万美元。C：把期权成本错误地加上，而不是减去。

B subtracts option cost from option value but omits the original -$0.20 million NPV. C adds the option cost instead of subtracting it.

> 基础 NPV + 期权价值 - 期权成本。
>
> Base NPV + option value - option cost.

Q62 互斥项目的 NPV 与 IRR 冲突

Conflicting NPV and IRR rankings

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.62。

原题 / Original question

一家公司正决定投资于两个净现值均为正的互斥项目之一。如果项目 1 的 NPV 高于项目 2，但 IRR 低于项目 2，公司应该：

A company is deciding whether to invest in one of two mutually exclusive projects with positive NPVs. If Project 1 has a higher NPV but a lower IRR than Project 2, the company should:

A 优先选择项目 1。 / prefer Project 1.

B 优先选择项目 2。 / prefer Project 2.

C 对项目 1 和项目 2 无差异。 / be indifferent between Project 1 and Project 2.

正确答案 / Answer: A

互斥意味着只能选一个。NPV 衡量创造的价值金额，IRR 衡量百分比回报；当两者排序冲突时，应优先选择 NPV 较高的项目 1。

Mutual exclusivity permits only one project. NPV measures the amount of value created, while IRR is a percentage return. When their rankings conflict, prefer Project 1 because its NPV is higher.

其他选项为什么错 / Why the other choices fail

B：只按更高 IRR 排序会忽略创造价值的金额。C：NPV 不同，不能视为无差异。

B ranks solely by the higher IRR and ignores the amount of value created. C treats projects with different NPVs as equivalent.

> 互斥项目排序冲突：优先 NPV。
>
> For mutually exclusive projects with conflicting rankings, prioritize NPV.

Q64 资金机会成本与互斥选择

Opportunity cost of funds and mutually exclusive choices

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.64。

原题 / Original question

在互斥项目之间作出选择时，分析师应该：

When choosing between mutually exclusive projects, an analyst should:

A 接受内部收益率最高的项目。 / accept the project with the highest IRR.

B 以资金机会成本作为折现率。 / use the opportunity cost of funds as the discount rate.

C 接受所有内部收益率高于资金机会成本的项目。 / accept the projects for which the IRR is greater than the opportunity cost of funds.

正确答案 / Answer: B

折现率应反映资金提供者对该项目风险要求的回报，即资金机会成本。用它计算 NPV，再进行互斥项目比较。

The discount rate should reflect the return capital providers require for the project's risk: the opportunity cost of funds. Use it to calculate NPV and compare the mutually exclusive alternatives.

其他选项为什么错 / Why the other choices fail

A：最高 IRR 不保证最高 NPV。C：即使多个项目都超过门槛，互斥条件仍只允许选一个。

A: the highest IRR does not guarantee the highest NPV. C: even if several projects exceed the hurdle rate, mutual exclusivity still permits only one.

> 机会成本决定折现率；互斥关系决定不能全部接受。
>
> Opportunity cost determines the discount rate; mutual exclusivity prevents accepting them all.

Q65 合规项目

Compliance projects

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.65。

原题 / Original question

一家电动汽车制造商投资于一项新技术，以满足新的安全标准。该项目最适合归类为：

An electric vehicle manufacturer invests in a new technology to meet new safety standards. This project is best classified as a(n):

A 扩张项目。 / expansion project.

B 合规项目。 / compliance project.

C 维持持续经营的项目。 / going concerm project.

正确答案 / Answer: B

决定分类的是投资目的：满足新的安全标准，属于监管或合规要求，因此选择 compliance project。原文 C 的 concerm 为拼写错误，含义按 going concern 理解。

Classification follows the purpose of the investment. Meeting new safety standards is a regulatory or compliance objective, so this is a compliance project. The original option C contains the typo “concerm”; its intended term is going concern.

其他选项为什么错 / Why the other choices fail

A：题目没有说明目的是扩大业务规模。C：维持原有业务是一般经营维护目的，而本题特别指出新的安全标准。

A: the question does not identify expansion of business size as the purpose. C: maintaining existing operations is a general maintenance objective; this question specifically identifies new safety requirements.

> 看投资“为了什么”，不要只看是否使用新技术。
>
> Identify why the investment is made, not merely whether it uses new technology.

Q67 互斥项目的数值比较

Numerical comparison of mutually exclusive projects

来源 / Source: 题库 PDF p.40（章节 p.11）；答案 PDF p.67。

原题 / Original question

一家公司正在评估以下互斥资本项目：

A company is evaluating the following mutually exclusive capital projects:

	Project 1 / 项目 1	Project 2 / 项目 2
NPV / 净现值	$180,000	$100,000
IRR / 内部收益率	10%	15%

如果最低要求回报率为 8%，公司应该投资于：

If the hurdle rate is 8%, the company should invest in:

A 仅项目 1。 / Project 1 only.

B 仅项目 2。 / Project 2 only.

C 项目 1 和项目 2 都投资。 / both Project 1 and Project 2.

正确答案 / Answer: A

两个项目的 IRR 均高于 8% 门槛，但互斥意味着不能同时投资。项目 1 的 NPV 为 180,000 美元，高于项目 2 的 100,000 美元，因此选择项目 1。

Both IRRs exceed the 8% hurdle rate, but the projects are mutually exclusive and cannot both be undertaken. Project 1 has an NPV of $180,000, higher than Project 2's $100,000, so select Project 1.

逐步计算 / Worked solution

检查两个项目的 IRR 是否达到门槛。

Check each IRR against the hurdle rate.

```
Project 1: 10% > 8%; Project 2: 15% > 8%
```

按互斥约束，只能保留一个；比较创造价值的金额。

The mutually exclusive constraint permits one project; compare the value added.

```
NPV1 = 180,000 > NPV2 = 100,000
```

选择 NPV 较高的项目 1，不因项目 2 的 IRR 较高而改选。

Choose Project 1 for its higher NPV, despite Project 2's higher IRR.

```
Choose Project 1 only (A)
```

其他选项为什么错 / Why the other choices fail

B：15% 的 IRR 较高，但项目 2 创造的 NPV 较低。C：违反互斥条件。

B: Project 2 has the higher 15% IRR but creates less NPV. C: accepting both violates mutual exclusivity.

> 门槛检查之后，再用 NPV 排序；“都合格”不代表“都能选”。
>
> After checking the hurdle rate, rank by NPV; both qualifying does not mean both can be selected.

06 资本结构

Capital Structure

本单元解决两件事：公司能借多少债，以及债务如何影响股权成本、WACC 和公司价值。先判断题目有没有税，再分清 D/E 与 D/(D+E)，最后代入公式。原题 28、57、59 是必须亲手算会的三题。

This unit asks how much debt a company can support and how debt affects its cost of equity, WACC and firm value. Identify the tax assumption first, distinguish D/E from D/(D+E), and then apply the formula. Work through original Questions 28, 57 and 59 yourself.

本单元 16 题 / 16 original items: Q16 · Q17 · Q18 · Q25 · Q26 · Q28 · Q29 · Q30 · Q33 · Q34 · Q37 · Q49 · Q50 · Q52 · Q57 · Q59

先学知识点 / Learn the concepts

6.1 债务承受能力：现金流稳定，资产可担保

Debt capacity: predictable cash flows and usable collateral

债务需要按期付息还本。因此，收入规模较大、现金流波动较低、经营杠杆较低，以及拥有较多易出售或转用于其他用途的资产，通常更有利于借债。成熟企业的现金流通常比初创企业稳定。利息保障倍数下降，表示付息缓冲变薄；但行业、阶段只是判断线索，并不保证某家公司一定高负债。

Debt requires scheduled interest and principal payments. Higher revenue, less volatile cash flows, lower operating leverage and assets that can be sold or redeployed generally support borrowing. Mature businesses usually have more predictable cash flows than start-ups. A falling interest coverage ratio means a thinner cushion for interest payments. Industry and life-cycle patterns are clues, not guarantees about an individual company.

```
Interest coverage = EBIT / Interest expense
```

对应原题 / Linked originals: Q16 · Q18 · Q26 · Q29

6.2 三种杠杆：看清传导的起点和终点

Three types of leverage: identify the starting and ending profit measures

经营杠杆关注收入变化如何放大经营利润 EBIT 的变化，来源是固定经营成本。财务杠杆关注 EBIT 变化如何放大净利润变化，来源包括固定利息支出。总杠杆把两段连起来，关注收入变化如何传导到净利润。不要看到 leverage 就全部理解为债务比例。

Operating leverage measures how a change in revenue affects operating profit, commonly EBIT, because of fixed operating costs. Financial leverage measures how a change in operating profit affects net profit because of fixed financing charges such as interest. Total leverage combines these effects and links revenue to net profit. The word leverage does not always mean a debt ratio.

```
DOL = % change in EBIT / % change in Revenue
```

对应原题 / Linked originals: Q16 · Q37

6.3 WACC：市值权重，只有债务成本作税盾调整

WACC: market-value weights and the debt tax adjustment

WACC 是各资本来源的成本按市值权重计算的加权平均。D、P、E 分别为债务、优先股、普通股市值，权重合计为 1。在本题采用的可扣税利息假设下，债务成本乘以 (1-T)；普通股与优先股股利不作这项调整。给出 D/E 时，必须先换成债务和股权占总资本的权重。

WACC weights the cost of each capital source by its market value. D, P and E denote debt, preferred equity and common equity; their weights sum to one. Under the deductible-interest assumption used here, multiply debt cost by (1-T). Do not apply that adjustment to common or preferred equity. Convert a supplied D/E ratio into capital weights before calculating WACC.

```
WACC = w_D*r_D*(1-T) + w_P*r_P + w_E*r_E
```

对应原题 / Linked originals: Q25 · Q49 · Q57 · Q59

6.4 无税 MM 命题 I：资本结构不改变公司价值

MM Proposition I without taxes: capital structure does not change firm value

在无税、无交易成本、无财务困境成本等理想化假设下，公司的价值来自经营资产的现金流，不取决于如何把融资分成债务和股权。增加较便宜的债务，并不会凭空创造价值；整体 WACC 也不变。现实中的税盾、困境成本和信息问题会改变结论，不能把模型直接当成实际融资建议。

Under idealized assumptions including no taxes, transaction costs or financial distress costs, operating cash flows determine firm value. Splitting financing differently between debt and equity does not create value. Replacing equity with cheaper debt therefore leaves overall WACC unchanged. Real-world taxes, distress costs and information problems can change the result; the model is not a direct financing recommendation.

```
V_L = V_U; WACC = r_0
```

对应原题 / Linked originals: Q30 · Q50

6.5 无税 MM 命题 II：股权成本上升，抵消便宜债务

MM Proposition II without taxes: rising equity cost offsets cheaper debt

股东领取付息后的剩余现金流。债务增加后，股东承担的财务风险更高，因此要求更高回报。无税 MM 下，股权成本对 D/E 呈线性关系，其上升恰好抵消增加低成本债务的影响。r_0 是全股权融资时的资本成本；公式的比率是债务除以股权，不是债务除以总资产。

Shareholders receive cash flows remaining after interest payments. More debt raises their financial risk, so they require a higher return. In the no-tax MM model, equity cost is linear in D/E and its increase exactly offsets the greater use of cheaper debt. Here r_0 is the all-equity cost of capital. The ratio in the formula is debt to equity, not debt to assets.

```
r_E = r_0 + (r_0-r_D)*(D/E)
```

对应原题 / Linked originals: Q17 · Q33 · Q50

6.6 有公司税的 MM：税盾增加价值，但股权仍有杠杆风险

MM with corporate taxes: the tax shield adds value, while equity retains leverage risk

在利息可扣税、税盾可利用且永久债务等标准假设下，税盾现值为 T×D，公司价值增加同样金额。股权成本公式的杠杆项则乘以 (1-T)。有税不代表股权成本不升，而是税盾缓和其上升幅度。题目给"公司总市值"时先算 E=V-D；税盾现值也不要混成每年利息的税后成本。

Under the standard assumptions of deductible interest, usable tax shields and permanent debt, the tax shield has a present value of T times D, increasing firm value by that amount. In the equity-cost formula, multiply the leverage term by (1-T). Equity cost still rises with leverage, but less steeply. When total firm value is supplied, calculate E=V-D first. The tax shield value is not after-tax annual interest.

$$V_L = V_U + T*D;\ r_E = r_0 + (r_0-r_D)*(1-T)*(D/E)$$

对应原题 / Linked originals: Q17 · Q28 · Q34 · Q49

6.7 融资优序理论：内部资金，然后债务，最后股权

Pecking order theory: internal funds, then debt, then equity

融资优序理论从信息不对称出发：管理层比外部投资者更了解公司，外部融资可能传递信号并产生信息成本。内部资金的相关问题最小，因此优先使用；不足时再发债，最后才考虑发行新股。这是融资偏好的理论排序，不是要求企业永远遵守的规则，也不等于寻找固定最优负债率。

Pecking order theory starts with information asymmetry: managers know more about the business than outside investors. External financing can convey signals and create information costs. Internal funds are therefore preferred; if they are insufficient, firms prefer debt before new equity. This describes a financing preference, not a rule that every firm must follow or a fixed target debt ratio.

$$\text{Internal funds} > \text{Debt} > \text{New equity}$$

对应原题 / Linked originals: Q52

对照记忆 / Compare and remember

MM 模型 / Model	公司价值与 WACC / Value and WACC	股权成本 / Equity cost
无税 / No taxes	V_L = V_U WACC = r_0	r_E = r_0 + (r_0-r_D)(D/E)
有公司税 / Corporate taxes	V_L = V_U + T*D 税盾使 WACC 下降 Tax shield lowers WACC	r_E = r_0 + (r_0-r_D)(1-T)(D/E)

最容易错在哪里 / Common traps

D/E=0.5 不等于债务权重为 50%；股权权重是 1/(1+0.5)。

D/E=0.5 does not mean a 50% debt weight; the equity weight is 1/(1+0.5).

看到 MM 先圈出 with taxes 或 without taxes，再判断公司价值与 WACC。命题 I 谈价值；命题 II 谈股权成本。

For MM questions, identify with taxes or without taxes first. Proposition I concerns value; Proposition II concerns equity cost.

有优先股时，WACC 的总市值必须包括优先股；优先股成本不乘 (1-T)。

Include preferred equity in total capital when present, and do not multiply its cost by (1-T).

经营杠杆看收入到 EBIT；财务杠杆看 EBIT 到净利润。

Operating leverage links revenue to EBIT; financial leverage links EBIT to net profit.

单元 06 原题练习与讲解

Original questions and worked explanations

Q16 影响债务承受能力的因素

Factors affecting debt capacity

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.16。

原题 / Original question

以下哪组因素最可能提高公司资本结构中的债务承受能力？

Which of the following combination of factors most likely increases a company's ability to support debt in its capital structure?

A 高收入、低现金流波动率，以及较少的易转用资产。 / High revenue, low cash flow volatility, and a low level of fungible assets

B 高收入、低经营杠杆，以及较多的易转用资产。 / High revenue, low operating leverage, and a high level of fungible assets

C 低现金流波动率、经营杠杆，以及较少的易转用资产。 / Low cash flow volatility, operating leverage, and a low level of fungible assets

正确答案 / Answer: B

较大的收入基础有助于支持偿债，较低经营杠杆减轻收入下降对 EBIT 的放大冲击，而易转用资产能提供较好的抵押或回收价值。这三项在 B 中方向一致。fungible 在这里强调资产可出售或转用，不是单指现金。

A larger revenue base helps support debt service, lower operating leverage reduces the amplification of revenue declines into EBIT declines, and fungible assets provide useful collateral or recovery value. All three features in B support debt capacity. Here fungible refers to assets that can be sold or redeployed, not simply to cash.

其他选项为什么错 / Why the other choices fail

A、C 都写“较少的易转用资产”，会削弱抵押与回收支持，因此不是最佳组合。

A and C both specify fewer fungible assets, weakening collateral and recovery support, so neither is the best combination.

> 低波动、低经营杠杆、强抵押支持，通常更能借债。
>
> Low volatility, low operating leverage and strong collateral generally support more debt.

Q17 杠杆与股权成本

Leverage and the cost of equity

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.17。

原题 / Original question

根据 Modigliani-Miller 命题，如果公司的债务股权比上升，以下哪项成本最可能出现最大增幅？

According to the Modigliani-Miller propositions, if a company's debt-to-equity ratio increases, which of the following costs is most likely to exhibit the largest increase?

A 加权平均资本成本（WACC）。 / WACC

B 债务成本。 / Cost of debt

C 股权成本。 / Cost of equity

正确答案 / Answer: C

债务增加后，股东获得的剩余现金流承担更大的财务风险，因此要求的股权回报率上升。无税 MM 下，该上升抵消便宜债务带来的影响；有公司税时，股权成本仍随 D/E 上升，但税盾缓和增幅。

More debt increases the financial risk borne by shareholders receiving residual cash flows, so their required return rises. In the no-tax MM model, the higher equity cost offsets the greater use of cheaper debt. With corporate taxes, equity cost still rises with D/E, but the tax shield moderates the increase.

其他选项为什么错 / Why the other choices fail

A：无税 MM 的 WACC 不变，有税情形下税盾可使其下降。B：基础 MM 假设下，债务成本不随该杠杆变化而上升。

A: WACC is unchanged without taxes and can decline with the corporate tax shield. B: in the basic MM setup, debt cost does not rise with this change in leverage.

> 杠杆上升先想到股东风险上升，因而股权成本上升。
>
> Higher leverage raises shareholder risk and therefore the cost of equity.

原资料说明：原解析混用了有税与无税模型的说明；本讲义按税制假设分别讲解，答案 C 不变。

Source note: The supplied explanation mixes taxed and untaxed cases; this guide separates the assumptions while retaining key C.

Q18 生命周期与融资结构

Life cycle and financing structure

来源 / Source: 题库 PDF p.32（章节 p.3）；答案 PDF p.18。

原题 / Original question

一家典型公司在生命周期的哪个阶段，其资本结构中的债务最可能多于股权？

At which stage in its life cycle would a typical company most likely have more debt than equity in its capital structure?

A 初创阶段。 / Start-up stage

B 成长阶段。 / Growth stage

C 成熟阶段。 / Mature stage

正确答案 / Answer: C

成熟企业的现金流通常已经转正，并更可预测，因而更容易获得成本较低的债务融资。题目问的是三个阶段的相对可能性，并不意味着所有成熟企业都必须债务多于股权。

Mature firms usually generate positive, more predictable cash flows and can therefore obtain lower-cost debt more readily. C is the most likely stage among the three alternatives. This is a comparative life-cycle pattern, not a claim that every mature company must have more debt than equity.

其他选项为什么错 / Why the other choices fail

A：初创企业现金流可能为负且不稳定。B：成长企业通常仍重视财务灵活性，股权往往仍是主要融资来源。

A: start-ups often have negative, unpredictable cash flows. B: growth firms commonly preserve financing flexibility and continue to rely mainly on equity.

> 现金流越成熟、越稳定，通常越能支持债务。
>
> More mature and predictable cash flows generally support more debt.

Q25 债务税盾

The debt tax shield

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.25。

原题 / Original question

以下哪种资本来源最可能享有税盾利益？

The source of capital that most likely benefits from a tax shield is:

A 债务。 / debt.

B 普通股权益。 / equity

C 优先股权益。 / preferred equity

正确答案 / Answer: A

在题目采用的利息可扣税假设下，利息减少公司的应税利润，因此债务的税后成本为 r_D(1-T)。这是发行公司的税盾，不是把投资者收到的所有收入一律免税。

Under the question’s deductible-interest assumption, interest reduces the company’s taxable profit, making after-tax debt cost r_D(1-T). This is a tax shield for the issuing company; it does not mean that all income received by investors is tax-exempt.

其他选项为什么错 / Why the other choices fail

B、C：普通股及优先股股利在本题标准 WACC 框架下不产生相同的公司利息税盾。

B and C: common and preferred dividends do not provide the same corporate interest tax shield in the standard WACC framework used here.

> WACC 中只有债务成本乘以 (1-T)。
>
> In this WACC framework, only debt cost is multiplied by (1-T).

Q26 行业特征与融资需求

Industry characteristics and financing needs

来源 / Source: 题库 PDF p.33（章节 p.4）；答案 PDF p.26。

原题 / Original question

以下哪家成熟企业最可能在资本结构中使用最多的杠杆？

Which of the following mature companies is most likely to use the greatest amount of leverage in its capital structure?

A 矿业公司。 / Mining company

B 软件公司。 / Software company

C 航运公司。 / Shipping company

正确答案 / Answer: C

按原答案的比较逻辑，航运需要大量资本投入，船舶等可交易资产又能支持担保借款。因此在这三个选项中选航运。判断同时考虑“需要多少融资”和“有多少可支持借款的资产”，并非只看行业是否有周期性。

The supplied solution emphasizes shipping’s substantial capital needs and tradable assets that can secure borrowing. Shipping is therefore the best choice among these three alternatives. Consider both financing needs and assets supporting borrowing, rather than judging the answer from cyclicality alone.

其他选项为什么错 / Why the other choices fail

A：矿业现金流对周期敏感，限制债务承受能力。B：软件常属轻资产模式，增长所需增量资本较少，借债需求较低。

A: mining cash flows are cyclical, limiting debt capacity. B: software often has a capital-light business model, reducing the incremental funding and borrowing needed for growth.

> 资本密集且资产适合抵押，往往支持较多债务融资。
>
> Capital intensity combined with suitable collateral often supports substantial debt financing.

Q28 有税 MM 股权成本计算

Calculating the MM cost of equity with taxes

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.28。

原题 / Original question

考虑下列一家公司的资料：

Consider the following information about a company:

Item / 项目	Value / 数值
Market value of debt outstanding / 未偿债务市值	£15,000
Market value of company / 公司总市值	£40,000
Cost of debt / 债务成本	4.0%
Unlevered WACC / 无杠杆 WACC	9.0%
Tax rate / 税率	25%

根据 Modigliani-Miller 命题，该公司的股权成本最接近：

Based on the Modigliani-Miller propositions, the company's cost of equity is closest to:

A 10.4%。 / 10.4%.

B 11.3%。 / 11.3%.

C 12.0%。 / 12.0%.

正确答案 / Answer: B

题目给的是公司总市值 £40,000，其中债务为 £15,000，股权只有 £25,000。将 D/E=0.60 和税率 25% 代入有税 MM 公式，得到 11.25%，最接近 11.3%。

The £40,000 figure is total firm value, including £15,000 of debt, so equity is £25,000. Insert D/E=0.60 and the 25% tax rate into the taxed MM equity-cost formula. The result is 11.25%, closest to 11.3%.

逐步计算 / Worked solution

第 1 步：求股权市值。

Step 1: calculate the market value of equity.

```
E = V-D = 40,000-15,000 = GBP 25,000
```

第 2 步：求债务股权比。

Step 2: calculate the debt-to-equity ratio.

```
D/E = 15,000/25,000 = 0.60
```

第 3 步：代入有税 MM 公式。

Step 3: apply the MM formula with corporate taxes.

```
r_E = 9% + (9%-4%)*(1-25%)*0.60 = 11.25%
```

其他选项为什么错 / Why the other choices fail

A：错误地用 D/V=15,000/40,000。C：忘记税率调整 (1-T)，误用无税公式。

A incorrectly uses D/V=15,000/40,000. C omits the (1-T) adjustment and uses the no-tax formula.

> 先从公司价值扣除债务得到股权，再计算 D/E。
>
> Subtract debt from firm value before calculating D/E.

Q29 偿债比率与债务承受能力

Coverage ratios and debt capacity

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.29。

原题 / Original question

其他条件相同，当公司的以下哪项指标发生变化时，其债务承受能力最可能下降？

All else being equal, a company most likely has a reduced debt capacity when its:

A 流动比率上升。 / current ratio increases.

B 杠杆比率下降。 / leverage ratio decreases.

C 利息保障倍数下降。 / interest coverage ratio decreases.

正确答案 / Answer: C

利息保障倍数衡量利润能覆盖利息支出多少次。倍数下降，说明付息安全垫变薄，公司再承担更多债务的空间通常减少。题目限定其他条件相同，比较的是指标变化方向。

Interest coverage measures how many times earnings cover interest expense. A lower ratio means a smaller cushion for making interest payments and generally less capacity to take on additional debt. Because the question holds other factors constant, focus on the direction of the indicator.

其他选项为什么错 / Why the other choices fail

A：流动比率上升通常改善短期偿债能力。B：已有杠杆下降通常释放进一步借债的空间。

A: a higher current ratio generally improves short-term payment capacity. B: lower existing leverage generally leaves more room for additional borrowing.

> 利息保障倍数越低，付息缓冲越薄。
>
> Lower interest coverage means a thinner debt-service cushion.

Q30 无税 MM 命题 I

MM Proposition I without taxes

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.30。

原题 / Original question

根据无税情形下的 Modigliani-Miller 命题 I，当公司增加资本结构中的债务比例时，公司价值将：

According to the Modigliani-Miller Proposition I without taxes, when a firm increases the proportion of debt in its capital structure, the firm value:

A 下降。 / decreases.

B 保持不变。 / remains unchanged.

C 上升。 / increases.

正确答案 / Answer: B

无税 MM 命题 I 认为，公司价值取决于经营资产产生的未来现金流，而不是债务与股权的融资组合。在模型假设及经营投资不变的条件下，调整债务比例只改变索取权的划分，不改变总价值。

MM Proposition I without taxes states that firm value depends on future cash flows from operating assets rather than the mix of debt and equity financing. With operating investments unchanged and the model's assumptions satisfied, changing leverage reallocates claims but does not change their combined value.

其他选项为什么错 / Why the other choices fail

A、C：都把资本结构变化当成了价值变化的原因，与无税 MM 假设下的结论不符。

A and C both attribute a value change to financing structure, contradicting the no-tax MM result.

> 无税 MM I：债务比例变，公司总价值不变。
>
> No-tax MM I: leverage changes, but total firm value does not.

Q33 无税 MM 命题 II 与比率辨析

MM Proposition II without taxes and ratio identification

来源 / Source: 题库 PDF p.34（章节 p.5）；答案 PDF p.33。

原题 / Original question

根据无税情形下的 Modigliani-Miller 命题 II：

According to Modigliani and Miller's Proposition II without taxes:

A 破产成本很高。 / the cost of bankruptcy is high.

B 公司的股权成本是债务资产比的线性函数。 / a company's cost of equity is a linear function of its debt-to-assets ratio.

C 用成本较低的债务替代股权，整体 WACC 保持不变。 / substituting equity with lower-cost debt capital results in an unchanged overall WACC.

正确答案 / Answer: C

使用更多低成本债务，会使股东承担更大的财务风险并要求更高回报。在无税 MM 下，股权成本上升恰好抵消低成本债务增加的影响，因而整体 WACC 保持不变。

Greater use of lower-cost debt increases shareholders' financial risk and required return. Under MM without taxes, the rise in equity cost exactly offsets the increased use of cheaper debt, leaving the firm's overall WACC unchanged.

其他选项为什么错 / Why the other choices fail

A：模型假设破产没有成本，并非成本很高。B：线性关系针对 D/E，而不是债务资产比 D/A。

A: the model assumes no bankruptcy costs, not high costs. B: the linear relationship is with D/E, not the debt-to-assets ratio D/A.

> 股权成本对 D/E 线性上升；WACC 不变。
>
> Equity cost rises linearly with D/E, while WACC stays constant.

Q34 永久债务税盾的现值

Present value of the permanent debt tax shield

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.34。

原题 / Original question

根据有税情形下的 Modigliani-Miller 命题 I，有杠杆公司的价值高于无杠杆公司的价值，其差额等于：

According to the Modigliani and Miller Proposition I with taxes, the value of a levered company is greater than the value of the unlevered company by an amount equal to the:

A 债务价值。 / value of the debt.

B 支付的税后利息。 / after-tax interest paid.

C 税率乘以债务价值。 / tax rate multiplied by the value of the debt.

正确答案 / Answer: C

标准有税 MM 模型中，永久债务产生持续利息税盾。若税盾能被利用并按模型假设折现，其现值为 T×D，所以有杠杆价值 $V_L=V_U+T\times D$。这里问的是税盾的现值，不是某一年的现金节省。

In the standard taxed MM model, permanent debt produces ongoing interest tax shields. When those shields can be used and are discounted under the model's assumptions, their present value is T times D, so $V_L=V_U+T$ times D. The question asks for a present value, not one year's saving.

其他选项为什么错 / Why the other choices fail

A：少乘了税率 T。B：税后利息是融资成本概念，不是未来税盾的现值。

A omits the tax rate T. B is an after-tax financing cost, not the present value of future tax shields.

> 有税 MM I：价值增加额 = 税盾现值 = T×D。
>
> Taxed MM I: added value equals the tax shield present value, T times D.

Q37 经营杠杆的定义

Definition of operating leverage

来源 / Source: 题库 PDF p.35（章节 p.6）；答案 PDF p.37。

原题 / Original question

以下哪项定义为公司经营利润对收入变化的敏感度？

Which of the following is defined as the sensitivity of a firm's operating profit to a change in its revenues?

A 总杠杆。 / Total leverage

B 财务杠杆。 / Financial leverage

C 经营杠杆。 / Operating leverage

正确答案 / Answer: C

题目的起点是收入、终点是经营利润。固定经营成本使收入变化能够放大为 EBIT 变化，因此这是经营杠杆。判断时盯住两端变量，比只记 leverage 一词更可靠。

The question starts with revenue and ends with operating profit. Fixed operating costs can magnify changes in revenue into changes in EBIT, which is operating leverage. Identify the two variables rather than relying on the word leverage alone.

其他选项为什么错 / Why the other choices fail

A：总杠杆连接收入与净利润。B：财务杠杆连接经营利润与净利润，反映利息等融资费用的影响。

A: total leverage links revenue to net profit. B: financial leverage links operating profit to net profit through financing charges such as interest.

> Revenue → EBIT：经营杠杆。
>
> Revenue to EBIT means operating leverage.

Q49 税率上升对 WACC 的影响

The effect of a higher tax rate on WACC

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.49。

原题 / Original question

其他条件相同，如果债务利息可以扣税，公司的边际税率上升将：

All else being equal, if interest on debt is tax deductible, an increase in the company's marginal tax rate will:

A 降低公司的 WACC。 / decrease the company's WACC.

B 不影响公司的 WACC。 / not affect the company's WACC.

C 提高公司的 WACC。 / increase the company's WACC.

正确答案 / Answer: A

边际税率 T 上升，使 (1-T) 下降，债务税后成本 r_D(1-T) 随之下降。资本权重和其他资本成本不变时，债务部分对 WACC 的贡献减少，整体 WACC 因而下降。

A higher marginal tax rate T reduces (1-T), lowering after-tax debt cost r_D(1-T). Holding capital weights and the other costs of capital constant, the debt component contributes less to WACC, so overall WACC falls.

其他选项为什么错 / Why the other choices fail

B：忽略了利息税盾变化。C：把税负增加与融资税盾的方向混淆了；本题限定其他条件不变。

B ignores the changing interest tax shield. C confuses a higher tax burden with the direction of the financing tax shield; the question holds other factors constant.

> 可扣税利息下，T 上升 → 税盾增加 → 税后债务成本下降。
>
> With deductible interest, higher T increases the shield and lowers after-tax debt cost.

Q50 杠杆变化与无税 WACC

Changing leverage and no-tax WACC

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.50。

原题 / Original question

一家公司将债务占资本结构的比例从 20% 提高至 60%。根据关于资本结构的无税 Modigliani-Miller 命题，该公司的 WACC 将：

A company increases its debt from 20% to 60% of its capital structure. Based on the Modigliani and Miller proposition (without taxes) regarding capital structure, the WACC of the company:

A 下降。 / decreases.

B 保持相同。 / remains the same.

C 上升。 / increases.

正确答案 / Answer: B

这题不需要把 20% 和 60% 代入计算，因为没有给出各资本成本。无税 MM 已直接给出结论：债务比例增加会提高股权成本，但公司价值和整体 WACC 保持不变。

There is no need to calculate with 20% and 60%, because individual capital costs are not supplied. The no-tax MM result answers the question directly: higher leverage raises equity cost but leaves firm value and overall WACC unchanged.

其他选项为什么错 / Why the other choices fail

A：只看到债务较便宜，忽略股权成本上升。C：只看到风险上升，忽略融资组合的抵消作用。

A considers cheaper debt but ignores the rising equity cost. C considers higher risk but ignores the offset within the financing mix.

> 无税 MM 下，WACC 与杠杆比例无关。
>
> Under no-tax MM, WACC is independent of leverage.

Q52 融资优序理论

Pecking order theory

来源 / Source: 题库 PDF p.37（章节 p.8）；答案 PDF p.52。

原题 / Original question

根据融资优序理论，公司管理层最可能偏好：

According to the pecking order theory, company managers most likely prefer to:

A 把发行债务作为最后选择。 / issue debt as the last resort.

B 先发行股权以保留现金流。 / raise equity first to preserve cash-flow.

C 相较于发行新股，更依赖内部融资。 / rely on internal financing over new equity.

正确答案 / Answer: C

融资优序理论按信息问题由少到多排列融资偏好：先使用内部产生的资金，不足时选择债务，最后才发行新股。因此，内部融资比新股融资更优先。

Pecking order theory ranks financing choices by their information problems: use internally generated funds first, debt next if needed, and new equity last. Internal financing is therefore preferred to issuing new shares.

其他选项为什么错 / Why the other choices fail

A：最后通常是股权，不是债务。B：股权排在内部资金及债务之后，而不是第一。

A: equity, not debt, is generally the last choice. B: equity follows internal funds and debt rather than coming first.

> 内部资金 → 债务 → 新股。
>
> Internal funds, then debt, then new equity.

Q57 含优先股的 WACC 计算

Calculating WACC with preferred equity

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.57。

原题 / Original question

一位分析师收集到某公司的以下资料：

An analyst gathers the following information about a company:

Capital Source / 资本来源	Market Value (Millions) / 市值（百万）	Before-tax Cost of Capital / 税前资本成本
Bonds / 债券	€60	6%
Preferred stock / 优先股	€20	8%
Common stock / 普通股	€120	15%

如果公司的边际税率为 40%，其加权平均资本成本最接近：

If the company's marginal tax rate is 40%, its weighted average cost of capital is closest to:

A 9.7%。 / 9.7%.

B 10.9%。 / 10.9%.

C 11.6%。 / 11.6%.

正确答案 / Answer: B

总资本市值为 €200 million，债务、优先股、普通股权重分别为 30%、10%、60%。只对 6% 的债务成本扣除 40% 税盾，再将三项成本加权相加，得到 10.88%，选择 B。

Total capital has a market value of €200 million. The debt, preferred-equity and common-equity weights are 30%, 10% and 60%. Apply the 40% tax adjustment only to the 6% debt cost, then sum the weighted costs. WACC is 10.88%, so choose B.

逐步计算 / Worked solution

第 1 步：按市值求总资本及三项权重，金额单位为百万欧元。

Step 1: total market capital and calculate the three weights; amounts are in EUR millions.

`V=60+20+120=200; w_D=0.30; w_P=0.10; w_E=0.60`

第 2 步：只有债务成本扣除利息税盾。

Step 2: apply the interest tax shield only to debt cost.

`After-tax debt cost = 6%*(1-40%) = 3.6%`

第 3 步：相加债务、优先股、普通股的贡献，依次为 1.08、0.80、9.00 个百分点。

Step 3: add debt, preferred and common equity contributions of 1.08, 0.80 and 9.00 percentage points.

`WACC = 0.30*3.6% + 0.10*8% + 0.60*15% = 10.88%`

其他选项为什么错 / Why the other choices fail

A：把 6%、8%、15% 简单平均，忽略市值权重和税盾。C：虽使用正确权重，却未将债务成本乘以 (1-T)。

A takes a simple average of 6%, 8% and 15%, ignoring market weights and the tax shield. C uses the correct weights but fails to multiply debt cost by (1-T).

> 三个资本来源都加权，只有债务作税盾调整。
>
> Weight all three capital sources; tax-adjust only debt.

Q59 由 D/E 换算资本权重

Converting D/E into capital weights

来源 / Source: 题库 PDF p.38（章节 p.9）；答案 PDF p.59。

原题 / Original question

如果一家公司的债务股权比为 0.5，估算该公司 WACC 时所用的股权权重最接近：

If a company's debt-to-equity ratio is 0.5, the weight of equity applied in estimating the company's WACC is closest to:

A 0.33。 / 0.33.

B 0.50。 / 0.50.

C 0.67。 / 0.67.

正确答案 / Answer: C

D/E 的分母是股权，WACC 权重的分母则是总资本。将股权记为 1 个相对单位，债务就是 0.5，总资本为 1.5；股权占 1/1.5=0.6667。这里的相对单位只是整理题目比率，没有增加题目数据。

D/E uses equity as its denominator, whereas WACC weights use total capital. Expressing equity as one relative unit makes debt 0.5 and total capital 1.5, giving an equity weight of 1/1.5=0.6667. These relative units simply restate the supplied ratio; they add no new economic data.

逐步计算 / Worked solution

第 1 步：将股权占总资本的比例写成只含 D/E 的公式。

Step 1: express the equity share of total capital using D/E.

$$w_E = E/(D+E) = 1/(1+D/E)$$

第 2 步：代入原题的债务股权比。

Step 2: insert the debt-to-equity ratio given in the question.

$$w_E = 1/(1+0.5) = 0.6667 \text{ approximately } 0.67$$

第 3 步：检查债务与股权权重合计为 1。

Step 3: check that debt and equity weights sum to one.

$$w_D = 0.5/1.5 = 0.3333;\ w_D+w_E = 1$$

其他选项为什么错 / Why the other choices fail

A：0.33 是债务权重。B：0.50 是题目给的 D/E，不能直接当成股权权重。

A is the debt weight. B is the given D/E ratio, not the equity weight.

> 仅有债务与股权时，w_E=1/(1+D/E)。
>
> With debt and equity only, w_E=1/(1+D/E).

07 商业模式

Business Models

这一单元主要考定义识别。先圈出题干中的动作：生产、付授权费、用户贡献、跨企业流程、牺牲利润率、不同买方或不同时间，然后匹配商业模式。

This unit mainly tests recognition. Identify the action in the stem: manufacturing, paying royalties, user contributions, cross-firm processes, sacrificing margins, different buyers or different times. Then match the business model.

本单元 11 题 / 11 original items: Q02 · Q03 · Q05 · Q07 · Q08 · Q11 · Q12 · Q13 · Q14 · Q61 · Q66

先学知识点 / Learn the concepts

7.1 先问四件事：卖给谁、提供什么、如何交付、怎样赚钱

Start with the customer, value, delivery and profit

商业模式说明企业如何组织资源，为客户创造价值并获得收入和利润。分析师应自行理解其客户、伙伴、成本与风险，不能照抄管理层叙述。经济利润还要扣除资本的机会成本；会计上赚钱，不代表超过投资者在其他同风险投资上可获得的回报。财务资产负债表只确认符合入账条件的项目，经济资产负债表的视角更广。

A business model explains how a firm organizes resources to create customer value and earn revenue and profit. Analysts must form their own understanding of customers, partners, costs and risks. Economic profit also deducts the opportunity cost of capital, so positive accounting profit does not by itself establish value creation. A financial balance sheet contains recognized items; an economic balance sheet considers a broader set of resources and obligations.

对应原题 / Linked originals: Q03 · Q08 · Q14

7.2 制造、授权与加盟：看题目强调哪一种关系

Manufacturing, licensing and franchising: identify the relationship

替别的企业生产、由对方负责营销，最对应合约制造商。使用别人的品牌并支付 royalty，最对应授权安排。增值经销商除分销外还提供安装、定制或支持；加盟则强调与母公司的明确经营关系。现实业务可能重叠，考试要找题干最直接描述的模式。

Producing goods that other firms market points to contract manufacturing. Using another party's brand in exchange for a royalty points to licensing. A value added reseller also supplies installation, customization or support. Franchising emphasizes a defined operating relationship with the parent business. Real businesses can combine these arrangements; select the model most directly described by the question.

对应原题 / Linked originals: Q02 · Q13

7.3 用户参与的两条线：贡献内容，还是吸引另一类用户

User participation: contributing content or attracting another group

用户直接贡献内容、知识、产品或服务，是众包。更多消费者吸引更多商户，更多商户又吸引更多消费者，是多边网络效应。单边网络主要由同一类用户相互增加价值。平台是较宽泛的描述，若题目明确说用户贡献内容，应优先识别更具体的 crowdsourcing。

Users directly contributing content, knowledge, products or services indicates crowdsourcing. More customers attracting more merchants, and more merchants attracting more customers, indicates a multi-sided network effect. In a one-sided network, users of the same type create value for each other. Platform is a broader label; a question explicitly about user-contributed content calls for the more specific crowdsourcing classification.

对应原题 / Linked originals: Q05 · Q07

7.4 价值链与供应链：用分析边界区分

Value chain versus supply chain: identify the boundary

按本题库口径，价值链关注一家企业内部为客户创造价值的活动；供应链追踪产品从生产到交付的流程，跨越企业内部和外部。题干出现 both within and external to a firm，是选供应链的关键。商业模式比某一条流程更宽，涵盖客户价值、运作和盈利方式。

In this question set, a value chain describes value-creating activities within a firm. A supply chain follows production and delivery across activities both inside and outside the firm. The phrase “both within and external to a firm” is the decisive clue for supply chain. A business model is broader than either process description and explains customer value, operations and profit generation.

对应原题 / Linked originals: Q12

7.5 定价模式：先认清价格为什么不同

Pricing models: ask why prices differ

主动牺牲利润率换取规模与份额，是渗透定价；免费基础版加收费功能，是免费增值。分层定价按买方、数量或功能分层；动态定价随时间及供需变化；价值定价按客户获得的价值设价。低价设备配合高利润耗材，是剃刀与刀片模式。第 9 题题干错配，应使用完整的第 61 题练习分层定价。

Sacrificing margins to build scale and market share indicates penetration pricing. A free basic service with paid features indicates freemium pricing. Tiered pricing varies by buyer, quantity or feature level; dynamic pricing responds to timing and supply-demand conditions; value-based pricing reflects customer value. Low-priced equipment paired with high-margin consumables indicates razors-and-blades pricing. Use intact Q61 to practice tiered pricing because Q9 has a mismatched stem.

对应原题 / Linked originals: Q11 · Q61

7.6 渠道策略：看谁把货卖给最终客户

Channel strategy: trace the sale to the end customer

制造商到批发商，再到零售商和最终客户，是传统渠道。制造商直接向最终客户销售，是直销。全渠道强调数字与实体渠道的整合，不等于必须经过批发商。识别题干描述的是货物流转顺序，还是线上线下协同。

Manufacturer to wholesaler to retailer to end customer is the traditional channel. Selling from the manufacturer directly to the end customer is direct sales. Omnichannel emphasizes integration of digital and physical channels and does not require a wholesaler. Distinguish a description of the distribution sequence from a description of coordination across sales channels.

对应原题 / Linked originals: Q66

对照记忆 / Compare and remember

定价 / Pricing	识别词 / Recognition clue
Penetration / 渗透	牺牲利润率以扩大份额 / Sacrifice margins for market share
Tiered / 分层	买方、数量、功能层级 / Buyer, quantity or feature tiers
Dynamic / 动态	不同时间及供需条件 / Time and supply-demand conditions
Freemium / 免费增值	免费基础功能，额外功能收费 / Free basic service, paid extras
Razors-and-blades / 剃刀与刀片	低价设备与高利润耗材 / Low-priced equipment, high-margin consumables

最容易错在哪里 / Common traps

分层看买方或层级；动态看时间及供需；渗透看牺牲利润换份额。

Tiered: buyers or tiers. Dynamic: timing and supply-demand conditions. Penetration: margins sacrificed for market share.

平台是宽泛概念；用户直接贡献内容时，众包是更精准的分类。

Platform is broad; direct user contributions make crowdsourcing the more precise classification.

经济利润扣机会成本；短期债务是明确的财务负债；不能据此说所有无形资产都不能入账。

Economic profit deducts opportunity cost. Short-term debt is a recognized financial liability. Do not infer that all intangible assets must be unrecognized.

看到关键词就完成匹配，再用不符合该关键词的选项排除。先做 Q2、Q7、Q12、Q61，最后覆盖本单元其余原题。

Match the decisive keyword, then eliminate options describing a different mechanism. Start with Q2, Q7, Q12 and Q61, then complete the remaining original questions in this unit.

单元 07 原题练习与讲解

Original questions and worked explanations

Q02 合约制造

Contract manufacturing

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.2。

原题 / Original question

一家公司生产商品，再由其他公司负责营销。其商业模式最恰当的描述是：

A company that produces goods to be marketed by other firms is best described as having a:

A 增值经销商商业模式。 / value added reseller business model.

B 授权安排商业模式。 / licensing arrangement business model.

C 合约制造商商业模式。 / contract manufacturer business model.

正确答案 / Answer: C

关键是“生产由他人营销的商品”。合约制造商承担生产，另一企业负责面向市场销售；不必从题干推断其拥有品牌或分销渠道。

The decisive feature is producing goods that others market. A contract manufacturer supplies production while another firm markets the output. The stem does not require the manufacturer to own the brand or distribution channel.

其他选项为什么错 / Why the other choices fail

A：增值经销商还提供安装、定制或支持。B：授权安排强调使用品牌等权利并支付授权费。

A describes a reseller that also provides installation, customization or support. B emphasizes licensed rights, such as a brand, in exchange for royalties.

> 为别人生产、由别人营销：contract manufacturer。
>
> Produce for others to market: contract manufacturer.

Q03 经济利润与机会成本

Economic profit and opportunity cost

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.3。

原题 / Original question

“经济”利润最恰当的描述是企业所有者获得的回报中：

"Economic" profit is best described as the return to a firm's owners:

A 以留存收益和向所有者分配的形式体现的部分。 / in the form of retained earnings and distributions to the owners.

B 已经缴纳企业税及分配收益相关税项后的部分。 / after corporate taxes and taxes on distributions have been paid.

C 超过其在其他投资中本可赚得的回报的部分。 / in excess of what they could have earned elsewhere on different investments.

正确答案 / Answer: C

经济利润考察“是否超过机会成本”。投资者把资本放在本企业，就放弃了其他投资机会；只有超过所需回报的部分才是经济利润。

Economic profit asks whether returns exceed opportunity cost. Investing capital in this business forgoes other opportunities. Only the return above the required opportunity-cost return constitutes economic profit.

其他选项为什么错 / Why the other choices fail

A 只描述收益留存或分配的形式；B 只强调税后回报；两者都没有扣除机会成本。

A only describes whether returns are retained or distributed. B only specifies an after-tax return. Neither explicitly deducts opportunity cost.

> 账面盈利不等于创造经济利润。
>
> Accounting profit does not necessarily imply positive economic profit.

原资料说明：原答案 C 保留。答案文件关于“利润表区分经济利润”的表述不够严谨；经济利润是分析概念，并非一般财务利润表必须单列的项目。

Source note: The supplied key C is retained. Its wording that an income statement distinguishes economic profit is imprecise: economic profit is an analytical concept, not a mandatory separate line in an ordinary financial income statement.

Q05 多边网络效应

Multi-sided network effects

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.5。

原题 / Original question

业务增长吸引更多客户和商户加入，并进一步促进业务增长。以下哪项最恰当地描述这种现象？

Which best describes business growth that attracts more customers and merchants, contributing to further growth in the business?

A 众包。 / Crowdsourcing

B 单边网络。 / A one-sided network

C 多边网络。 / A multi-sided network

正确答案 / Answer: C

客户与商户是两类不同参与者。一边人数增加提高另一边的参与价值，形成跨群体的正反馈，因此是多边网络。

Customers and merchants are two distinct participant groups. Growth on one side increases participation value on the other, creating positive feedback across groups. This is a multi-sided network.

其他选项为什么错 / Why the other choices fail

A 强调用户直接贡献产品或内容；B 强调同一类用户彼此创造价值，未涵盖客户与商户这两个群体。

A emphasizes users contributing products or content. B concerns value among users of one type and does not capture the two groups of customers and merchants.

> 更多买方吸引卖方、更多卖方吸引买方：multi-sided。
>
> More buyers attract sellers and more sellers attract buyers: multi-sided.

Q07 众包

Crowdsourcing

来源 / Source: 题库 PDF p.30（章节 p.1）；答案 PDF p.7。

原题 / Original question

一家知识聚合公司允许用户直接贡献在线内容，其商业模式最恰当的称呼是：

The business model of a knowledge aggregation company that allows its users to contribute directly to online content is best referred to as a:

A 平台商业模式。 / platform business model.

B 市场平台商业模式。 / marketplace business model.

C 众包商业模式。 / crowdsourcing business model.

正确答案 / Answer: C

题干最具体的特征是用户直接贡献内容。众包把分散用户的知识或劳动纳入产品与服务，正好对应这一描述。

The most specific feature is users directly contributing content. Crowdsourcing incorporates the knowledge or efforts of dispersed users into a product or service, which directly matches the stem.

其他选项为什么错 / Why the other choices fail

A“平台”范围更宽，未特指用户贡献内容；B 主要撮合买卖双方，而题干强调知识贡献。

A, platform, is broader and does not specifically identify content contributions. B primarily connects buyers and sellers, whereas the stem focuses on contributed knowledge.

> 用户贡献内容或知识：crowdsourcing。
>
> Users contribute content or knowledge: crowdsourcing.

Q08 财务与经济资产负债表

Financial versus economic balance sheets

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.8。

原题 / Original question

以下哪项最可能列入一家公司的“财务”资产负债表？

Which of the following would most likely be included on a company's "financial" balance sheet?

A 短期债务义务。 / Short-term debt obligations

B 客户关系。 / Relationships with customers

C 与关键供应商的关系。 / Relationships with key suppliers

正确答案 / Answer: A

短期债务是明确的已确认负债。一般客户关系和供应商关系虽然可能具有经济价值，但题干没有说明其满足财务确认条件，因此 A 是最明确的入账项目。

Short-term debt is a clearly recognized liability. Ordinary customer and supplier relationships can have economic value, but the stem provides no basis for their financial recognition. A is therefore the clearest item on the financial balance sheet.

其他选项为什么错 / Why the other choices fail

B、C 属于较广义经济资源的例子；仅存在关系，并不能自动在财务资产负债表中确认为资产。

B and C illustrate broader economic resources. The mere existence of a relationship does not automatically establish an asset recognized on the financial balance sheet.

> 有经济价值，不等于已在财务报表确认。
>
> Economic value does not automatically mean financial-statement recognition.

原资料说明：答案 A 与原文件一致。原解析对无形资产的措辞较宽，本讲义不将其扩大为“所有客户关系或无形资产均不得入账”。

Source note: Answer A agrees with the supplied file. The original discussion of intangible assets is broad; this guide does not generalize it into a rule that all customer relationships or intangible assets must be excluded.

Q11 渗透定价

Penetration pricing

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.11。

原题 / Original question

当企业愿意牺牲利润率以建立市场份额时，最可能采用以下哪一种定价模式？

Which of the following pricing models is most likely used when a firm willingly sacrifices margins to build market share?

A 动态定价。 / Dynamic pricing

B 免费增值定价。 / Freemium pricing

C 渗透定价。 / Penetration pricing

正确答案 / Answer: C

题干直接描述用较低利润率换取规模和市场份额，这是渗透定价的目的。它强调竞争目标，而不要求一定免费。

The stem explicitly describes sacrificing margins to gain scale and market share, the purpose of penetration pricing. It identifies a competitive objective and does not require the product to be free.

其他选项为什么错 / Why the other choices fail

A 主要随时间与供需调整价格；B 提供免费基础功能，再对额外功能或使用量收费。

A adjusts prices with timing and supply-demand conditions. B provides a free basic offering and charges for additional features or usage.

> 牺牲 margin，扩大 market share：penetration。
>
> Sacrifice margin to build market share: penetration.

Q12 供应链与价值链

Supply chain versus value chain

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.12。

原题 / Original question

产品创造过程中所涉及的一系列流程，包括企业内部和外部的流程，最恰当的称呼是：

The sequence of processes involved in the creation of a product, both within and external to a firm, is best referred to as a:

A 价值链。 / value chain.

B 供应链。 / supply chain.

C 商业模式。 / business model.

正确答案 / Answer: B

决定词是“企业内部和外部”。供应链覆盖跨企业的生产与交付步骤，不要求由同一家企业完成。

The decisive phrase is “within and external to a firm.” A supply chain includes production and delivery steps across firms; the steps need not be performed by one business.

其他选项为什么错 / Why the other choices fail

A 在本题库中关注企业内部的价值创造活动；C 描述企业整体如何运营、提供价值和盈利，范围更广。

A focuses on value-creating activities within the firm in this question set. C is the broader description of how the business operates, delivers value and earns profit.

> 跨越企业边界的产品流程：supply chain。
>
> Product processes across firm boundaries: supply chain.

Q13 授权安排

Licensing arrangements

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.13。

原题 / Original question

一家公司使用他人的品牌名称制造并销售产品，并为此支付授权费。该公司最可能：

A company manufacturing and selling a product using someone else's brand name in return for a royalty most likely operates:

A 按加盟模式经营。 / under a franchise model.

B 作为合约制造商经营。 / as a contract manufacturer.

C 按授权安排经营。 / under a licensing arrangement.

正确答案 / Answer: C

“他人的品牌”加“royalty”是授权安排的直接证据：企业支付费用，以获得使用对方品牌等权利的许可。

Another party's brand plus a royalty directly indicates licensing: the business pays for permission to use a right such as the other party's brand.

其他选项为什么错 / Why the other choices fail

A 强调与母公司的明确加盟经营关系；B 强调替他人生产、由他人营销。两者都不是题干最直接描述的关系。

A emphasizes a defined franchise operating relationship with a parent. B emphasizes producing goods that another firm markets. Neither is the relationship most directly described.

使用他人品牌并付 royalty：licensing。

Use another brand and pay a royalty: licensing.

Q14 分析师独立理解商业模式

Independent understanding of a business model

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.14。

原题 / Original question

分析一家企业时，分析师应当：

When analyzing a company, analysts should

A 忽略该企业的商业模式。 / ignore the company's business model.

B 形成自己对该企业商业模式的理解。 / develop their own understanding of the company's business model.

C 依赖管理层对该企业商业模式的描述。 / rely on management's description of the company's business model.

正确答案 / Answer: B

商业模式连接客户价值、经营方式、财务表现与风险。分析师应审视证据并形成自己的判断；管理层的描述可作为信息来源，但不能代替独立分析。

The business model connects customer value, operations, financial performance and risk. Analysts should examine evidence and form their own judgment. Management's account is an information source, not a substitute for independent analysis.

其他选项为什么错 / Why the other choices fail

A 忽略了理解企业的重要框架；C 将管理层叙述直接当成结论，缺少独立判断。

A discards an important framework for understanding the company. C accepts management's description as the conclusion without sufficient independent judgment.

> 理解商业模式，需要自己的分析。
>
> Understanding the business model requires your own analysis.

Q61 分层定价

Tiered pricing

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.61。

原题 / Original question

分层定价最恰当的描述是：

Tiered pricing is best described as:

A 在不同时间收取不同价格。 / charging different prices at different times.

B 向不同买方收取不同价格。 / charging different prices to different buyers.

C 设备采用低价，同时对需要重复购买的耗材采用高利润率定价。 / combining a low price on a piece of equipment with high-margin pricing on repeat-purchase consumables.

正确答案 / Answer: B

本题库将分层定价定义为对不同买方或购买层级收取不同价格，常见分层依据是购买数量或产品功能。

This question set defines tiered pricing as charging different prices to different buyers or purchasing tiers, often according to quantity purchased or product features.

其他选项为什么错 / Why the other choices fail

A 是动态定价的典型特征；C 是剃刀与刀片定价模式。

A describes a typical feature of dynamic pricing. C describes razors-and-blades pricing.

> 不同买方或层级选 tiered；不同时间选 dynamic。
>
> Different buyers or tiers: tiered. Different times: dynamic.

Q66 传统分销渠道

Traditional distribution channels

来源 / Source: 题库 PDF p.39（章节 p.10）；答案 PDF p.66。

原题 / Original question

制成品从制造商流向批发商、零售商，最后到最终客户。这最恰当地描述了：

The flow of finished goods from manufacturer to wholesaler, retailer, and finally to the end customer best describes a(n):

A 直销策略。 / direct sales strategy.

B 全渠道策略。 / omnichannel strategy.

C 传统渠道策略。 / traditional channel strategy.

正确答案 / Answer: C

题干明确列出制造商、批发商、零售商与客户的逐级流转。这正是传统分销渠道，而非制造商直接销售给最终客户。

The stem specifies successive distribution through the manufacturer, wholesaler, retailer and customer. This is the traditional channel rather than a direct sale from the manufacturer to the end customer.

其他选项为什么错 / Why the other choices fail

A 会绕过批发或零售中间环节；B 强调线上与线下渠道整合，并不定义这种逐级货物流转。

A bypasses wholesale or retail intermediaries. B emphasizes integration of digital and physical channels and does not define this sequence of goods distribution.

> 制造商、批发商、零售商、客户：traditional channel。
>
> Manufacturer, wholesaler, retailer, customer: traditional channel.

附录 A 第 9 题：原资料错配

Appendix A · Q9 source mismatch

保留原题，不计入正确率。当前缺少能与三个定价选项对应的题干。

Retain the item but exclude it from scoring. The stem corresponding to its three pricing choices is missing.

Q09 题干与答案错配

Mismatched question and answer

来源 / Source: 题库 PDF p.31（章节 p.2）；答案 PDF p.9。

原题 / Original question

以下哪一项是遵守有关保密准则的建议程序？
程序 1：仅向获授权的同事披露能够改善客户服务的信息。
程序 2：鼓励采用行业领先企业使用的标准保密程序。

Which of the following is a recommended procedure for complying with the Standard relating to preservation of confidentiality? Procedure 1 Disclose to authorized fellow employees only information that will improve service to the client Procedure 2 Encourage the adoption of standard confidentiality procedures utilized by leading firms in the industry

A 分层定价。 / tiered pricing.

B 动态定价。 / dynamic pricing.

C 基于价值的定价。 / value-based pricing.

当前题干：待补充 / Printed item: missing information

待补充：现有题干与程序讨论保密准则，但 A、B、C 全是定价模式。第二份文件第 9 页给出的答案为 A，并解释分层定价；该答案不能用于解答当前印出的题干。

Missing information: the printed stem and procedures concern confidentiality, but all three options are pricing models. Page 9 of the answer file supplies A and explains tiered pricing. That key cannot answer the currently printed stem.

其他选项为什么错 / Why the other choices fail

不能在现有材料中判断哪一个定价选项满足保密准则。保留全部原文与选项，不补写缺失的定价题干，也不自行改成道德题选项。

The supplied material cannot establish which pricing option satisfies a confidentiality procedure. All original content and options are retained. The missing pricing stem is not reconstructed, and ethics options are not invented.

Q9 不纳入正确率；完整学习分层定价请用 Q61。

Exclude Q9 from accuracy scoring; use intact Q61 to study tiered pricing.

原资料说明：需补充与定价选项对应的原始题干，才能恢复本题。当前归类为待归类 / 异常题；答案解析主题是商业模式。

Source note: The original stem corresponding to the pricing options is required to restore this item. It is currently unclassified/anomalous; the supplied answer explanation concerns business models.

题库原页节选 / Extract from the original page

9. Which of the following is a recommended procedure for complying with the Standard relating to preservation of confidentiality?

Procedure 1	Disclose to authorized fellow employees only information that will improve service to the client
Procedure 2	Encourage the adoption of standard confidentiality procedures utilized by leading firms in the industry

A. tiered pricing.
B. dynamic pricing.
C. value-based pricing.

核对结果：题库 PDF 第 31 页原文即存在此错配，并非本讲义重新排版造成。答案 PDF 第 9 页写 A，并解释 tiered pricing；可在 Q61 学习同一有效考点。

Verification: the mismatch is present on question-bank PDF page 31, not introduced by this layout. Answer PDF page 9 marks A and explains tiered pricing. Q61 supplies a usable question on the same pricing concept.

附录 B 公式与判断速查

Appendix B · Formula and decision reference

只覆盖本题库涉及的计算和判断。金额单位必须一致；T 为税率，r 为要求回报率，D、P、E 为债务、优先股、普通股的市值。

This reference covers calculations and decisions represented in the source questions. Keep currency units consistent. T is the tax rate; r is the required return; D, P and E are market values of debt, preferred equity and common equity.

NPV / 净现值

```
NPV = -I_0 + sum[CF_t / (1+r)^t]
```

CF 使用与折现率一致的税后增量现金流。Q23 的等额年末现金流可用普通年金现值。

Use incremental after-tax cash flows consistent with the discount rate. Q23 has equal year-end payments, so the ordinary-annuity formula applies.

原题 / Originals: Q23

普通年金 / Ordinary annuity

```
PV = CF * [1-(1+r)^(-n)] / r
```

先求现金流现值，再减初始支出才是 NPV。

Calculate inflow present value first; subtract the initial outlay to obtain NPV.

原题 / Originals: Q23

IRR / 内部收益率

```
0 = CF_0 + sum[CF_t / (1+IRR)^t]
```

常规现金流下：NPV(r)<0，则 IRR<r。互斥项目排序冲突优先 NPV。

For conventional cash flows: NPV(r)<0 implies IRR<r. Prioritize NPV when mutually exclusive rankings conflict.

原题 / Originals: Q48 · Q62 · Q64 · Q67

实物期权 / Real options

```
Expanded NPV = base NPV + option value - option cost
```

仅在期权成本尚未计入基础 NPV 时另外扣除；不要重复扣减。

Deduct option cost separately only if it is not already included in base NPV.

原题 / Originals: Q51

放弃决策 / Abandonment

```
Abandon if continuation PV < net abandonment proceeds
```

在同一时点比较两个未来方案；沉没成本不改变比较。

Compare future alternatives at the same date; sunk costs do not change the comparison.

原题 / Originals: Q27 · Q41

投入资本回报率 / ROIC

`ROIC = NOPAT / average invested capital`

衡量税后经营利润的产生效率，区别于资本成本或门槛回报率。

Measures after-tax operating profitability, distinct from cost of capital or a hurdle rate.

原题 / Originals: Q42

资本权重 / Capital weights

`w_D = D/(D+P+E); w_P = P/(D+P+E); w_E = E/(D+P+E)`

采用市值。仅有债务与股权时，w_E=1/(1+D/E)。

Use market values. With debt and equity only, w_E=1/(1+D/E).

原题 / Originals: Q57 · Q59

WACC / 加权平均资本成本

`WACC = w_D*r_D*(1-T) + w_P*r_P + w_E*r_E`

本题假设利息可扣税；普通股与优先股成本不乘 (1-T)。

Interest is assumed deductible here; common and preferred equity costs are not multiplied by (1-T).

原题 / Originals: Q25 · Q49 · Q57

无税 MM / MM without taxes

`V_L = V_U; WACC = r_0; r_E = r_0 + (r_0-r_D)*(D/E)`

r_0 是无杠杆资本成本。以上结论依赖 MM 的理想化假设。

r_0 is the unlevered cost of capital. These conclusions rely on idealized MM assumptions.

原题 / Originals: Q17 · Q30 · Q33 · Q50

有税 MM / MM with corporate taxes

`V_L = V_U + T*D; r_E = r_0 + (r_0-r_D)*(1-T)*(D/E)`

T×D 是标准永久债务假设下的税盾现值，不是单期税后利息。

T times D is the tax-shield present value under standard permanent-debt assumptions, not one period’s after-tax interest.

原题 / Originals: Q28 · Q34

经营杠杆与利息保障 / Operating leverage and coverage

`DOL = % change in EBIT / % change in Revenue; Interest coverage = EBIT / Interest expense`

收入到 EBIT 的敏感度为经营杠杆；利息保障下降通常意味着债务承受力减弱。

Revenue-to-EBIT sensitivity is operating leverage; lower interest coverage generally weakens debt capacity.

原题 / Originals: Q29 · Q37

附录 C 全题答案与定位

Appendix C · Complete answer and location index

这是原题编号顺序，便于快速核对。Q9 的 A 仅是答案文件记录，不能用于当前错配题干；本表按待补充处理。每个题号均可点击。

This index follows the original numbering. For Q9, A is only the answer file's recorded key and is invalid for the mismatched printed stem; the item remains missing information. Every question number is clickable.

Q67	A	05 · 互斥项目的数值比较 Numerical comparison of mutually exclusive projects	题库 Q-bank: 40 答案 Answers: 67

附录 D 中英术语与最终自检

Appendix D · Glossary and final self-check

英文 / English	中文 / Chinese	识别提示 / Recognition cue
Corporation	公司法人	独立于所有者的法人组织 / Separate corporate entity
Sole proprietorship	独资企业	经营简单，所有者承担无限责任 / Simple structure; unlimited owner liability
General partner / Limited partner	普通合伙人 / 有限合伙人	谁管理、谁承担何种责任 / Distinguish management and liability
Stakeholder / Shareholder	利益相关者 / 股东	股东是利益相关者的一部分 / Shareholders are a stakeholder group
Principal / Agent	委托人 / 代理人	拥有者委托决策者 / Owner delegates to decision-maker
Information asymmetry	信息不对称	不同参与者掌握的信息不同 / Unequal access to information
Covenant	债务契约条款	保护债权人的约束 / Contractual protection for creditors
Proxy voting	代理投票	股东不出席也能投票 / Voting without attending the meeting
Staggered board	交错任期董事会	部分董事分期改选 / Directors elected in staggered cohorts
Drag / Pull on liquidity	流入拖累 / 付款或信用压力	收得慢 / 付得早或信用紧 / Slower receipts versus earlier payments or tighter credit
Mutually exclusive projects	互斥项目	不能同时全部接受 / Alternatives cannot all be accepted
Hurdle rate	最低要求回报率	项目所需达到的回报门槛 / Required project return threshold
Abandonment option	放弃期权	本题库归为 sizing / Classified as sizing in this set
Tax shield	税盾	可扣税利息带来的税收利益 / Tax benefit from deductible interest
Fungible assets	可出售或转用的资产	有助抵押和回收价值 / Useful collateral and recovery value
Pecking order	融资优序	内部资金、债务、新股 / Internal funds, debt, new equity
Contract manufacturer	合约制造商	生产由其他公司营销的商品 / Produces goods marketed by others
Royalty / Licensing	授权费 / 授权安排	使用他人品牌等权利 / Payment for licensed rights
Crowdsourcing	众包	用户直接贡献内容或服务 / Users directly contribute content or services
Supply chain / Value chain	供应链 / 价值链	本题库强调跨企业 / 企业内部 / Cross-firm versus within-firm focus here
Tiered / Dynamic pricing	分层 / 动态定价	买方或层级 / 时间及供需 / Buyers or tiers versus time and supply-demand

完成前，确认你能独立说出这六句话

Before finishing, explain these six rules without looking

• 我知道为什么股权对投资者更危险，而债务对发行人有更强的付款压力。

I can explain why equity is riskier for investors while debt imposes stronger payment pressure on issuers.

• 我能区分 drag、pull、primary 和 secondary，不只背例子。

I can distinguish drag, pull, primary and secondary liquidity rather than merely memorize examples.

• 我会先用税后现金流计算现值，再扣初始支出。

I use after-tax cash flows, calculate their present value, and then subtract the initial outlay.

• 我知道互斥项目为何优先较高 NPV，并能说明 IRR 快速判断的现金流条件。

I can explain the NPV preference for mutually exclusive projects and the cash-flow condition for the IRR shortcut.

• 我会把 D/E 换成资本权重，并知道有税与无税 MM 的不同。

I can convert D/E to capital weights and distinguish taxed from untaxed MM.

• 我能用一个关键词区分合同制造、授权、众包、供应链和不同定价模式。

I can distinguish manufacturing, licensing, crowdsourcing, supply chains and pricing models from their decisive clues.

正确率 = 答对题数 ÷ 66；猜对题仍要复习。第 9 题不参与计分。

Accuracy = correct answers ÷ 66. Revisit guessed answers even when correct. Q9 is excluded.

原资料勘误：Q9 为题干错配；Q3 的经济利润表述、Q8 的资产确认表述与 Q17 的 MM 解释已加限定或澄清，答案字母保持原文件记录（Q9 不作为有效答案）。个别拼写问题保留并注明。

Source editorial notes: Q9 has a mismatched stem. Q3’s economic-profit wording, Q8’s asset-recognition wording and Q17’s MM discussion are qualified or clarified. Supplied answer letters are retained, except that Q9 is not treated as valid. Minor source typos are retained and noted.
