CFA LEVEL I / EQUITY INVESTMENTS

股权投资
154 题中英对照精讲

Learn the concept.
Apply it to the original question.

8 个主题章节 · 26 个知识点单元 · 40 道优先练习题

8 thematic chapters · 26 concept units · 40 priority questions

先教判断方法，再用你提供的原题示范；154 题完整保留，逐题对应答案与解析。

Concepts first, then your source questions. All 154 questions are retained with matched bilingual answers and explanations.

先学知识点 / CONCEPTS

再看原题与步骤 / ORIGINAL QUESTIONS + WORKED REASONING

最后用公式、词汇、题号索引回查 / FORMULAS + GLOSSARY + QUESTION INDEX

依据两份上传文件编写，保留原题编号并单列原稿勘误。

Prepared from the two uploaded files, preserving question numbers and distinguishing source defects from the intended learning points.

编制日期 / Prepared: 2026-11-02

怎样最快使用这份讲义

A focused first pass, then targeted repetition

第一轮先读每个单元的“知识点”和“速记”，只做标有 CORE 的 40 题。每题先遮住答案，给自己 60-90 秒判断，再看解法。第二轮只补做同一单元的其他题，避免在已掌握的题型上平均用力。

First read the concepts and memory cues, then attempt the 40 CORE questions. Cover the answer and allow 60-90 seconds before checking the reasoning. On the second pass, use the other questions in the same unit to reinforce weak areas.

建议用时 / Time	学习动作 / Focus	优先内容 / Priorities
15 分钟 / min	快速建立地图 / Orient	看章节地图、公式目录和 4 道问题题提醒。 / Read the map, formulas and four defective-item notices.
55 分钟 / min	掌握估值 / Valuation	第 7-8 章：DDM、优先股、合理 P/E、EV；先认 D0/D1 与估值时点。 / Chapters 7-8: cash flows, valuation dates and multiples.
45 分钟 / min	拿下计算 / Calculations	第 1 章 T5 + 第 2 章：保证金、融资回报、权重和总收益。 / Margin, financed returns, index weights and returns.
45 分钟 / min	概念辨析 / Concepts	第 1 章其余 + 第 3-6 章：订单、效率、股东权利、预测和五力。 / Orders, efficiency, rights, forecasts and Porter.
20 分钟 / min	复盘与补练 / Review	只记录错因：定义、方向、分母、时点、题干误读。选同组题补练。 / Tag the error and repeat a question from the same unit.

这是一条约 180 分钟的第一轮路线，不是完成 154 题的时间承诺。完整练习可以拆成多轮；计算题做对以后，还要能说出分母、时间点和为何排除另外两项。

This is an approximately 180-minute first-pass route, not a promise to finish all 154 questions. Split the full set into further rounds; after solving a calculation, explain its denominator, time point and alternative choices.

来源与标记 / Scope and labels

题目来自《1000 题 (2).pdf》股权投资部分，第 41-68 页；答案来自《股权投资 (1).pdf》第 1-154 页。两份文件未提供可核验的逐题官方 / 模拟来源标签，因此统一标为“用户提供题库”，不擅自认定为官方题。

Questions come from the equity section of the first upload, PDF pages 41-68; solutions come from the second upload, pages 1-154. Neither file establishes verifiable official-versus-mock provenance for each question, so this guide labels them as the user-provided question set.

章节为便于学习而重组，未宣称覆盖某一年度全部考纲。Q2、Q12、Q17、Q25 不宜按未经修复的原稿计入正确率；其余题仍须按注明假设理解。

Chapters are reorganized for learning and are not a claim of full coverage of any year’s syllabus. Exclude Q2, Q12, Q17 and Q25 from scoring in their unrepaired source form; read stated assumptions for the remaining questions.

章节地图与检索

Choose a concept, then follow its original questions

章 / Ch.	主题 / Topic	单元 / Units	题数 / Qs	起页 / Page
1	市场组织与交易机制 Market Organization and Trading	5	30	4
2	证券市场指数 Security Market Indexes	3	23	23
3	市场效率与行为金融 Market Efficiency and Behavioral Finance	3	21	37
4	股权证券与公司行动 Equity Securities and Corporate Actions	4	25	49
5	公司分析与财务预测 Company Analysis and Forecasting	2	11	63
6	行业与竞争分析 Industry and Competitive Analysis	2	13	70
7	内在价值与绝对估值 Intrinsic Value and Absolute Valuation	4	17	77
8	相对估值与合理市盈率 Relative Valuation and Justified P/E	3	14	89

40 道优先练习题 / 40 CORE questions

市场组织与交易机制：Q4, Q13, Q29, Q18, Q120, Q115, Q123, Q124, Q130, Q136

证券市场指数：Q71, Q137, Q138, Q88, Q144

市场效率与行为金融：Q69, Q65, Q83, Q23

股权证券与公司行动：Q19, Q47, Q27, Q108, Q107

公司分析与财务预测：Q90, Q7

行业与竞争分析：Q53, Q129, Q135

内在价值与绝对估值：Q102, Q82, Q140, Q114, Q142

相对估值与合理市盈率：Q1, Q128, Q63, Q36, Q21, Q122

CORE 是学习路线标记，依据本题库的代表性与公式覆盖选择，不是考试出现概率或官方权重。题号始终与原题一致；PDF 书签按章节、单元、题号展开。

CORE denotes a learning route chosen for representative concepts and formula coverage. It does not estimate exam frequency or official weights. Question numbers always match the source; PDF bookmarks expand by chapter, unit and question.

Q2、Q12、Q17、Q25 的原稿问题详见附录 C。 / See Appendix C for the four defective source items.

第 1 章 市场组织与交易机制

Market Organization and Trading

分清谁提供资金、谁提供流动性、订单怎样成交，以及借钱买股后究竟剩多少自有资金。

Separate funding from liquidity provision, understand order execution, and track the investor’s own equity when leverage is used.

本章原题 / Original questions: 30 | 单元 / Units: T1, T2, T3, T4, T5

T1 金融体系、市场与资产

Financial systems, markets and assets

对应原题 / Questions: Q147, Q148, Q149, Q97, Q99, Q101, Q127, Q12

1. 一级市场是发行人向投资者出售新证券，资金流向发行人；二级市场是投资者之间转手，资金流向卖方。买到一只股票并不自动意味着公司收到钱。

In the primary market, issuers sell new securities and receive the proceeds. In the secondary market, securities and cash move between investors; the issuer does not receive the trade proceeds.

2. 货币市场处理短期融资工具，如政府短期国库券；资本市场主要处理较长期债务与股权。实物资产往往独特、交易不频繁，管理与搜寻买家可能较费力。

Money markets trade short-term instruments such as government bills; capital markets principally trade longer-term debt and equity. Real assets are often heterogeneous and may require costly management and buyer searches.

3. 金融体系的作用包括配置资本、转移风险、形成价格和安排支付。监管可减轻代理问题、欺诈与信息不对称，并关注长期负债的资金支持。客户越能辨认合格代理人，相关监管需求越低，但不等于所有监管都不需要。

Financial systems allocate capital, transfer risk, discover prices and support payments. Regulation can address agency problems, fraud, information asymmetry and funding of long-term obligations. Better ability to identify competent agents reduces that particular need for regulation.

4. 机会成本是放弃的最佳可行替代方案的回报。相同期限、风险的存款证中，选择低收益产品意味着放弃高收益替代品；不要把“最佳替代回报”与“两者收益差”混为一谈。第 12 题原稿错配，只用于识别这一概念。

Opportunity cost is the return on the best forgone feasible alternative. Do not confuse that return with the yield difference between the chosen and forgone investments. Q12 has a mismatched stem and options and is excluded from scoring.

速记：先问钱流向谁，再判断一级还是二级。

Memory cue: First ask who receives the cash: the issuer or another investor.

Q147 一级与二级市场

Primary and secondary markets

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.147

题意 在二级市场中，资金从谁流向谁？

In the secondary market, funds flow from:

A	交易者流向交易者	traders to traders.
B	发行人流向投资者	issuers to investors.
C	投资者流向发行人	investors to issuers.

Q147 答案 / **Answer: A**

二级市场交易的是已发行证券，买方把钱支付给卖方交易者，发行公司通常不直接收到这笔买卖款。一级市场的新发行才把认购资金交给发行人。

Secondary-market transactions transfer existing securities between traders, so the buyer pays the seller. The issuer generally does not receive the proceeds of this trade. In a primary offering, purchasers provide new capital directly to the issuer.

易错点：判断资金最终归谁：归卖出持有人是二级；归发行人是一级。

Trap: Follow the proceeds: the selling holder receives secondary-market funds; the issuer receives primary-market funds.

Q148 一级与二级市场

Primary and secondary markets

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.148

题意 发行人向投资者出售证券时，属于哪种交易？

When issuers sell securities to investors:

A	一级市场交易	they trade in the primary market.
B	二级市场交易	they trade in the secondary market.
C	资金在一级与二级市场之间流动	funds flow between the primary and the secondary market.

Q148 答案 / **Answer: A**

发行人出售新发行证券融资，是一级市场交易，资金由投资者流向发行人。此后投资者将证券转卖给另一位投资者，才进入二级市场。二级市场流动性有助于投资者愿意参与一级发行。

An issuer selling newly issued securities to investors conducts a primary-market transaction. Funds move from purchasers to the issuer. Subsequent resale between investors is secondary-market activity; its liquidity can make investors more willing to participate in primary issuance.

易错点：IPO 是一级发行的常见例子，但一级市场不限于 IPO。

Trap: An IPO is a common example, but primary markets also include later new issues.

Q149 有效运作的金融体系

A well-functioning financial system

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.149

题意 在运作良好的金融体系中，资产价格变化主要反映什么变化？

In a well-functioning financial system, changes in asset prices primarily reflect changes in

A	执行成本	execution costs.
B	流动性需求	the demand for liquidity.
C	资产基本价值	fundamental asset values.

Q149 答案 / **Answer: C**

信息有效的市场把与资产现金流、增长和风险有关的信息纳入价格，因此价格主要随基本价值变化。流动性与低交易成本也很重要，但它们不是良好体系中价格变动应主要反映的对象。

In an informationally efficient system, prices primarily reflect fundamental asset values and changes in expected cash flows, growth, and risk. Liquid markets and low execution costs support the system, but fundamental value is the principal driver identified by this question.

易错点：Operational efficiency 关注成本；informational efficiency 关注价格反映价值。

Trap: Operational efficiency concerns trading costs; informational efficiency concerns prices reflecting value.

Q097 货币市场与资本市场

Money markets versus capital markets

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.97

题意 政府短期国库券最可能在哪一类市场交易？

In which markets are government bills most likely traded?

A	货币市场	Money markets
B	资本市场	Capital markets
C	另类投资市场	Alternative investment markets

Q097 答案 / Answer: A

货币市场交易短期债务工具，通常期限不超过一年，政府短期国库券是典型例子。资本市场主要对应股票和较长期债务；另类投资则不是按这种短期政府债务工具分类。先看期限与工具性质。

Money markets trade short-term debt instruments, generally with maturities of one year or less. Government bills are standard examples. Capital markets cover equities and longer-term debt, while alternative-investment markets are not the relevant classification for a short-term government bill.

易错点：Government bill 与长期 government bond 不要混淆。

Trap: Distinguish a short-term government bill from a longer-term government bond.

Q099 实物资产的特征

Characteristics of real assets

来源 / Source: S1 PDF p.58 (章节页 / section p.18); S2 answer p.99

题意 实物资产最可能具有哪一项特征？

A characteristic of real assets is that they most likely:

A	在流动性良好的市场交易	trade in liquid markets.
B	管理成本低	are inexpensive to manage.
C	各项资产具有不同属性，彼此独特	are unique assets with different attributes.

Q099 答案 / Answer: C

房地产、设备等实物资产会因地点、用途、质量和状态而不同，难以完全标准化，因此具有独特性。它们往往还需要维护和专业管理，交易也可能耗时且成本较高，所以不能概括为高流动性或管理便宜。

Real assets such as properties and equipment differ in location, use, condition and quality, making them heterogeneous. They often require maintenance and specialized management and may trade infrequently at significant transaction cost. Uniqueness is therefore more characteristic than high liquidity or inexpensive management.

易错点：实物资产的异质性常与估值、交易和管理难度相联系。

Trap: Heterogeneity often creates valuation, trading and management challenges.

Q101 信息不对称与监管需求

Information asymmetry and regulation

来源 / Source: S1 PDF p.58 (章节页 / section p.18); S2 answer p.101

题意 如果客户识别胜任代理人的能力增强，监管需求最可能怎样变化？

If the ability of clients to identify competent agents increases, the need for regulation most likely.

A	下降	Decreases
B	不变	remains the same.
C	上升	increases.

Q101 答案 / Answer: A

金融监管的一项作用是缓解客户难以辨别代理人能力及行为的信息问题。客户更能识别合格代理人、评价服务表现，就能改善市场约束，因此由这种信息不对称带来的监管需求会减少。

One rationale for regulation is that clients struggle to identify competent agents and evaluate their performance. Better client ability reduces this information problem and strengthens market discipline. The regulatory need arising from that particular problem therefore decreases, other things equal.

易错点：减少的是该项监管需求，不代表其他监管目标全部消失。

Trap: Reducing this rationale does not eliminate every other objective of regulation.

Q127 市场监管目标

Objectives of market regulation

来源 / Source: S1 PDF p.63 (章节页 / section p.23); S2 answer p.127

题意 下列哪些属于市场监管目标？

Which of the following is an objective of market regulation?

A	只有控制代理问题	Controlling agency problems only
B	只有确保长期负债有资金支持	Ensuring that long-term liabilities are funded only
C	同时包括控制代理问题与确保长期负债有资金支持	Both controlling agency problems and ensuring that long-term liabilities are funded

Q127 答案 / Answer: C

监管既要减少代理冲突，也关注长期承诺是否有足够资金支持。其他目标还包括防止欺诈、维护公平、建立有益标准，以及防止资本不足的金融机构把过度风险转嫁给投资者。

Market regulation addresses agency problems and the funding of long-term liabilities. Other objectives include deterring fraud, promoting fairness, setting useful standards, and preventing undercapitalized financial institutions from exposing investors to excessive risk. Both stated goals therefore qualify.

易错点：A、B 的 only 把正确目标错误地限定为唯一目标。

Trap: The word only makes A and B too restrictive.

Q012 [原稿问题 SOURCE ISSUE] 原题错配：机会成本与资金来源

Source mismatch: opportunity cost and capital sources

来源 / Source: S1 PDF p.43 (章节页 / section p.3); S2 answer p.12

题意 三张以面值购买的存款证 CD1、CD2、CD3 利率分别为 2.2%、3.3%、4.4%，期限和违约风险相同。投资 CD1 的机会成本最接近多少？注意：原文件所列选项属于另一道题。

An investor considers the following certificates of deposit (CDs) available for purchase at face value:

存款证 CD	利率 Interest Rate
1	2.2%
2	3.3%
3	4.4%

If each CD has the same maturity and default risk, the opportunity cost of investing in CD 1 is closest to:

A	发行债务	Debt issuances
B	回购股份	Share repurchases
C	正的净营运资本	Positive net working capital

Q012 原答案 A | 核验：题干与选项错配 / Source A; mismatched item

机会成本是放弃的最佳替代方案收益，因此按现有题干应为 CD3 的 4.4%，并非 4.4%-2.2%=2.2%。但三个选项均不是收益率。答案页 A 解释的是“发行债务是资金来源”，与本题干不匹配，不能把 A 作为本题的有效答案。

The opportunity cost is the return on the best forgone alternative: CD3 at 4.4%, not merely the 2.2 percentage-point return difference. None of the listed options is a rate. The supplied solution instead answers a different question about debt issuance being a source of capital.

易错点：此题不纳入正确率统计；可以分别记住机会成本和资金来源两项知识。

Trap: Exclude this defective item from scoring; learn the two separate concepts without forcing an answer.

原稿核验：经原题页面与答案页双重核对，题干和选项 / 解析错配。原答案 A 仅适用于“何者是资金来源”的另一题；未擅自补造原题选项。

Source check: The source stem is mismatched with its options and solution. Source answer A belongs to a capital-source question. No replacement answer choices have been invented.

T2 中介机构与市场结构

Intermediaries and market structures

对应原题 / Questions: Q4, Q50, Q73, Q78

1. 经纪商 broker 帮客户寻找交易对手；交易商 dealer 以自己的资本与客户交易，持有库存并报买卖价，因而直接提供流动性。交易所 exchange 提供交易规则与场所。

A broker acts for clients and locates counterparties. A dealer trades using its own capital, holds inventory and quotes bid and ask prices, directly providing liquidity. An exchange provides the trading venue and rules.

2. 报价驱动市场主要向交易商成交；订单驱动市场按规则匹配买卖订单；经纪市场适合难以寻找对手方、较独特或交易稀疏的资产。

Quote-driven markets trade against dealers; order-driven markets match submitted orders under matching rules. Brokered markets are useful when assets are unusual or counterparties are difficult to find.

3. 投资银行协助发行股票和债券。包销 underwritten offering 中，承销商承担按约定价格销售整批证券的承诺；尽力推销 best efforts 不保证全数售出。已上市公司再融资属于 seasoned offering。

Investment banks arrange securities offerings. In an underwritten offering, the underwriter commits to the issue at an agreed price. Best efforts does not guarantee that the entire issue is sold. A seasoned offering is an additional issue by an established issuer.

速记：Dealer 用自己的钱；broker 帮别人撮合；investment bank 帮公司融资。

Memory cue: Dealer: own capital. Broker: client execution. Investment bank: issuer financing.

Q004 [优先练习 CORE] 中介机构的功能

Financial intermediaries

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.4

题意 以下哪类金融中介最可能向客户提供流动性服务？

Which of the following financial intermediaries is most likely to provide liquidity service to its clients?

A	经纪商 (brokers)	Brokers
B	交易商 / 自营报价商 (dealers)	Dealers
C	交易所 (exchanges)	Exchanges

Q004 答案 / Answer: B

交易商以自身账户与客户成交，承担库存与价格风险，让客户有需要时能买卖，因此直接提供流动性。经纪商主要替客户寻找或执行交易，交易所主要提供交易场所、规则和撮合设施。

Dealers trade for their own accounts and stand ready to transact with clients, supplying liquidity while bearing inventory risk. Brokers act as agents arranging or executing client orders. Exchanges provide trading venues, rules, and matching infrastructure.

易错点：Broker 替你找交易；dealer 自己成为交易对手。

Trap: A broker arranges your trade; a dealer becomes your counterparty.

Q050 经纪人市场

Brokered markets

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.50

题意 若某项资产很难找到合适买家或卖家，它最可能在哪类市场交易？

If it is difficult to find a buyer or a seller for an asset, the asset most likely trades on:

A	经纪人市场	brokered markets.
B	订单驱动市场	order-driven markets.
C	报价驱动市场	quote-driven markets.

Q050 答案 / Answer: A

独特、非标准化或不活跃的资产，很难持续形成大量订单，也不适合交易商长期持有库存。经纪人通过寻找与撮合买卖双方来完成交易，因此经纪人市场适合这类难以找到交易对手的资产。

Unique, non-standardized, or infrequently traded assets may not attract enough orders for an order book, and dealers may be unwilling to hold inventory. Brokers search for and match suitable counterparties, making brokered markets appropriate for such assets.

易错点：order-driven 靠订单簿；quote-driven 靠 dealer 报价；brokered 靠经纪人找对手方。

Trap: Order-driven markets use order books; quote-driven markets use dealer quotes; brokered markets use matching agents.

Q073 包销与尽力承销

Underwritten versus best-efforts offerings

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.73

题意 投资银行按商定的发行价格保证整个发行成功出售，最符合哪一种发行方式？

When an investment bank guarantees the sale of an entire issue at a negotiated offering price, this best describes a(n):

A	供股发行	rights offering.
B	尽力承销发行	best effort offering.
C	包销发行	underwritten offering.

Q073 答案 / Answer: C

包销安排中，投行承诺按照与发行人谈定的价格承接或保证出售整批证券，并承担销售风险。尽力承销只承诺尽力寻找买家，不保证全数售出；供股则向原股东按比例提供认购新股的权利。

In an underwritten offering, the investment bank guarantees the issue at a negotiated price and bears the associated placement risk. Best-efforts arrangements involve trying to sell the securities without guaranteeing full subscription. A rights offering provides existing shareholders with proportional rights to subscribe.

易错点：关键词 guarantee 指向包销，而非 best efforts。

Trap: The word guarantee points to underwriting, not best efforts.

Q078 投资银行的服务

Investment banking services

来源 / Source: S1 PDF p.54 (章节页 / section p.14); S2 answer p.78

题意 帮助客户安排已发行证券的追加发行（seasoned securities offerings）的金融中介，通常称为什么？

Financial intermediaries that help their clients arrange seasoned securities offerings are best known as:

A	投资银行	investment banks.
B	商业银行	commercial banks.
C	多边交易设施	multi-lateral trading facilities.

Q078 答案 / Answer: A

投资银行为企业提供融资建议、发行安排和承销等服务，既包括首次发行，也包括已发行证券的后续增发。商业银行主要提供存贷款及支付服务；多边交易设施是撮合买卖的交易场所，不是企业发行融资顾问。

Investment banks advise corporate clients and arrange offerings, including initial issues and additional issues of seasoned securities. Commercial banks primarily provide deposit, lending and payment services. Multilateral trading facilities are trading venues that match transactions rather than corporate securities-offering advisers.

易错点：Seasoned offering 指后续发行；不要误认为只是二级市场投资者间转手。

Trap: A seasoned offering is a follow-on issue, not simply trading existing shares between investors.

T3 订单指令与买卖盘

Order instructions and the order book

对应原题 / Questions: Q13, Q26, Q29, Q18, Q126, Q25

1. Execution instruction 决定怎样成交，例如市价单与限价单；validity instruction 决定何时有效、有效多久；clearing instruction 规定结算安排。题干看到 how / when / settlement 就分别对应三类。

Execution instructions specify how an order is filled; validity instructions specify when or for how long it is valid; clearing instructions specify settlement arrangements. Match how, when and settlement to the correct category.

2. 市价单追求立即按可得最优价格成交，但不保证具体价格。买入限价单只能在限价或更低价格买；卖出限价单只能在限价或更高价格卖。买入要看 ask，卖出要看 bid。

A market order seeks execution at the best available price without guaranteeing a particular price. A buy limit sets a maximum price; a sell limit sets a minimum. Buyers consume asks, while sellers consume bids.

3. 最高 bid 是买方最积极报价，最低 ask 是卖方最积极报价。卖出报价高于最佳 ask，排在市场后面；卖出价降至最佳 bid 或以下，可以立即与买盘成交。撮合规则决定订单相配，定价规则决定成交价格，两者不同。

The highest bid and lowest ask are the best quotes. A sell limit above the best ask is behind the market; a sell limit at or below the best bid is marketable. Order matching rules select orders to match; pricing rules determine execution prices.

4. FOK 要求立即全部成交，否则全部取消；IOC 允许立即部分成交，其余取消。第 25 题答案按 IOC 算出 75.97，但题干写 FOK；按通常定义不会成交。此区分已用 SEC Investor.gov 核实，见文末来源 W1、W2。

FOK requires immediate execution in full or cancellation of the entire order. IOC allows immediate partial execution and cancels the remainder. Q25's solution uses IOC logic despite a FOK stem; under the standard FOK definition there is no fill. See sources W1 and W2.

速记：买看卖盘、卖看买盘；限价管价格，FOK/IOC 管数量与有效性。

Memory cue: Buy against asks, sell against bids; a limit controls price, while FOK/IOC controls immediate execution conditions.

Q013 [优先练习 CORE] 交易指令分类

Execution, validity, and clearing instructions

来源 / Source: S1 PDF p.43 (章节页 / section p.3); S2 answer p.13

题意 一笔订单的清算指令最可能说明什么？

Clearing instructions for an order most likely indicate:

A	如何执行订单	how to fill the order.
B	何时可以执行订单	when the order may be filled.
C	如何安排交易结算	how to arrange the settlement of the trade.

Q013 答案 / Answer: C

交易指令可按三个问题区分：execution 说明怎样成交，例如价格限制；validity 说明何时有效，例如当日有效；clearing 说明如何完成交收，例如结算安排及相关账户。题目问 clearing，因此选 C。

Execution instructions specify how to fill an order; validity instructions specify when it may be filled; clearing instructions specify how the final settlement should be arranged. The question asks about settlement, so clearing instructions are relevant.

易错点：How to trade、when to trade、how to settle 分别对应三类指令。

Trap: Match how to trade, when to trade, and how to settle to the three instruction types.

Q026 有效性指令

Validity instructions

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.26

题意 说明订单何时可以被执行的指令属于哪一类？

An instruction that indicates when an order may be filled is most likely a(n):

A	有效性指令	validity instruction.
B	清算指令	clearing instruction.
C	执行指令	execution instruction.

Q026 答案 / Answer: A

Validity 回答订单什么时候有效，例如当日有效、撤单前有效或仅立即有效。Execution 回答以什么条件成交；clearing 回答如何安排交收。因此“when an order may be filled”直接指向 validity。

Validity instructions define when an order may be filled, for example during the day, until canceled, or immediately only. Execution instructions govern how it is filled; clearing instructions govern settlement. The word “when” identifies validity.

易错点：看到 when 选 validity；不要被“执行”这个中文动词误导。

Trap: The word “when” points to validity, even though the sentence mentions filling an order.

Q029 [优先练习 CORE] 市价单与限价单

Market versus limit orders

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.29

题意 卖出指令要求经纪商立即取得当前可获得的最佳价格，且未规定最低卖价。它属于什么订单？

A sell order that instructs the broker to obtain the best price immediately available without specifying a minimum price is a:

A	止损 / 触发单	stop order
B	限价单	limit order.
C	市价单	market order.

Q029 答案 / Answer: C

市价单优先追求立即成交，以当时盘口能提供的最佳价格执行，没有最低卖价保障。卖出限价单设定最低可接受价格，但可能无法成交；止损单则须先满足价格触发条件，才变为有效订单。

A market sell order seeks execution at the best price currently available without a minimum-price constraint. A sell limit sets the minimum acceptable price but may remain unfilled. A stop order becomes valid only after its trigger condition is met.

易错点：市价单有成交价格风险；限价单有不成交风险。

Trap: Market orders face execution-price risk; limit orders face non-execution risk.

Q018 [优先练习 CORE] 限价单与盘口

Limit orders relative to the market

来源 / Source: S1 PDF p.44 (章节页 / section p.4); S2 answer p.18

题意 盘口买价为 €47.85、€47.70，卖价为 €48.00、€48.20。以下哪个卖出限价位于市场后方（behind the market）？

A limit order book (in € per share) has the following order prices:

买价 Bids	卖价 Asks
-	48.20
-	48.00
47.85	-
47.70	-

A sell order is behind the market at a price of.

A	€47.70	€47.70.
B	€48.00	€48.00.
C	€48.20	€48.20.

Q018 答案 / Answer: C

最佳卖价是最低卖价 €48.00。卖出限价高于该价，意味着卖得更贵、成交优先程度更低，属于 behind the market，所以 €48.20 正确。€48.00 是在最佳卖价处；€47.70 低于现有最佳买价，属于可立即与买盘成交的卖单。

The best ask is the lowest offer, €48.00. A sell limit above it is behind the market, so €48.20 is correct. A €48.00 sell limit is at the best ask. A €47.70 sell limit is marketable against the existing €47.85 bid.

易错点：买单越高越积极；卖单越低越积极。

Trap: Higher bids and lower asks are more aggressive.

原稿核验：原答案对 A 的文字解释不够准确：€47.70 卖单可以与现有 €47.85 买价成交；这不影响正确选项 C。

Source check: The source explanation of A is imprecise: a €47.70 sell limit is marketable against the €47.85 bid. The correct option remains C.

Q126 订单驱动市场的规则

Rules in order-driven markets

来源 / Source: S1 PDF p.63 (章节页 / section p.23); S2 answer p.126

题意 订单驱动交易系统中的订单撮合规则，用于什么目的？

Order matching rules in order-driven trading systems are used to:

A	将买单与卖单配对	match buy orders to sell orders.
B	决定交易商提交的订单以什么价格成交	determine the prices at which the orders submitted by dealers are matched.
C	决定客户提交的订单以什么价格成交	determine the prices at which the orders submitted by customers are matched.

Q126 答案 / Answer: A

撮合规则决定哪张买单与哪张卖单成交，例如按照价格优先、时间优先排序。成交定价规则则决定已撮合交易的价格。不要把“谁跟谁成交”和“以什么价格成交”混为一谈。

Order-matching rules pair buy orders with sell orders, often using priorities such as price and time. Trade-pricing rules determine the price of the matched transaction. These are different functions, regardless of whether the submitter is a dealer or a customer.

易错点：Matching = 配对；pricing = 定价。B、C 描述后者。

Trap: Matching identifies counterpart orders; pricing determines the execution price.

Q025 [原稿问题 SOURCE ISSUE] FOK 与 IOC 的区别

Fill-or-kill versus immediate-or-cancel

来源 / Source: S1 PDF p.45 (章节页 / section p.5); S2 answer p.25

题意 盘口买盘：10 股@$75.70、20 股@$75.80；卖盘：5 股@$75.90、10 股@$76.00、15 股@$76.10。投资者以 $76.00 限价提交 20 股 FOK 买单，成交均价最接近多少？

A trader gathers the following limit order information about a stock:

买单数量（股） Bid Size (number of shares)	股价（美元） Share Price ($)	卖单数量（股） Offer Size (number of shares)
10	75.70	--
20	75.80	--
--	75.90	5
--	76.00	10
--	76.10	15

If the trader submits a fill or kill buy order for 20 shares at a limit price of $76.00, the trader's average price per share for this trade will be closest to:

A	$75.80	$75.80.
B	$75.97	$75.97.
C	$76.00	$76.00.

Q025 原答案 **B** | 标准 **FOK** 无成交；**IOC** 才有该均价 / **No standard FOK fill**

限价以内只有 5+10=15 股。按标准 FOK（立即全部成交，否则全撤）定义，20 股无法全部买到，订单不成交，没有成交均价。若按答案页实际使用的 IOC 逻辑，成交 15 股、撤销余下 5 股，均价 =(5×75.90+10×76.00)/15=$75.9667。

Only 15 shares are offered at or below $76.00. Under the standard FOK definition, all 20 must fill immediately or the entire order is canceled, so there is no trade price. Under the IOC treatment used in the supplied solution, 15 fill at an average of $75.9667 and five are canceled.

易错点：买单扫卖盘；限价不允许买到 $76.10。FOK 全成或全撤，IOC 允许部分成交。

Trap: A buy order takes offers. The limit excludes $76.10. FOK requires a full fill; IOC permits a partial fill.

原稿核验：原答案把 FOK 按 IOC 处理并注明某些市场使用该称呼，因此给 B。本讲义同时保留其预期答案与标准术语区别，避免把部分成交当成标准 FOK 规则。

Source check: The source treats FOK as IOC and notes that terminology can differ across markets. B is its intended result, but partial execution is inconsistent with the standard FOK definition.

外部核验 / External check: W1, W2，见文末来源 / see Sources.

T4 多空头寸与方向暴露

Positions and directional exposure

对应原题 / Questions: Q3, Q96, Q100

1. 头寸名称与标的方向是两件事。卖出看跌期权叫 short put，但通常具有正向标的暴露：标的上涨有利于卖方、下跌不利。买入看跌期权 long put 则通常受益于标的下跌。

Contract position and underlying exposure are different concepts. Writing a put creates a short position in the option but generally positive exposure to the underlying. Buying a put generally benefits from a fall in the underlying.

2. 卖空股票的毛利润上限是卖空收入，因为股价最低降至零；亏损理论上无上限，因为股价可不断上涨。实际还须考虑借券费、补付股息和保证金要求。买 put 的到期利润还要减权利金，市场跌并不保证盈利。

A short stock position has a capped gross gain because the stock can fall only to zero, but theoretically unlimited loss as the stock rises. Borrow fees, dividend compensation and margin matter. A long put must also recover its premium before producing a profit at expiry.

速记：Short put ≠ 做空标的；short stock 的亏损没有理论上限。

Memory cue: Short put does not mean short underlying; short stock has theoretically unlimited loss.

Q003 期权持仓与标的方向

Option position versus underlying exposure

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.3

题意 投资者卖出一份以富时 100 指数期货为标的的看跌期权。她在期权合约中的头寸，以及对标的指数期货的方向性敞口，分别是什么？

An investor writes a put option on FTSE 100 Index futures. Which of the following best describes the investor's position with respect to the put contract and her exposure to the underlying index future, respectively?

A	多头；空头	Long, short
B	空头；多头	Short, long
C	空头；空头	Short, short

Q003 答案 / **Answer: B**

Write an option 就是卖出期权，因此她是看跌期权空头。标的上涨时，看跌期权通常贬值，卖方受益；标的下跌时，卖方可能亏损，因此方向性敞口为多头。这里的多头敞口并不表示她已经持有期货多头合约。

Writing an option creates a short option position. A short put generally benefits when the underlying rises because the put loses value, and suffers when it falls. It therefore has long directional exposure to the underlying, without necessarily holding a long futures contract.

易错点：合约本身的 long/short，与标的价格方向的 long/short 要分开判断。

Trap: Distinguish the option position from its directional exposure to the underlying.

Q096 卖空的损益边界

Short-sale payoff limits

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.96

题意 卖空者最可能面临什么样的收益与损失范围？

Short sellers are most likely exposed to:

A	收益无限、损失有限	unlimited gains and limited losses.
B	收益有限、损失无限	limited gains and unlimited losses.
C	收益和损失都无限	unlimited gains and unlimited losses.

Q096 答案 / Answer: B

卖空先借股票卖出，之后买回归还。忽略费用，收益 = 卖出价 - 买回价。股价最低降到0，故每股最大美元收益为初始卖出价；股价理论上可无限上涨，买回成本没有上限，因此潜在损失无上限。

A short seller borrows and sells shares, then buys them back. Ignoring costs, profit per share equals initial sale price minus repurchase price. The price cannot fall below zero, limiting dollar gains to the initial sale proceeds; the price has no theoretical ceiling, leaving potential losses unbounded.

易错点：有限的是相对于卖出所得的美元收益；不要将其机械等同于保证金回报最多 100%。

Trap: The dollar gain is limited by sale proceeds; the return on posted margin is a different denominator.

Q100 看跌观点与看跌期权

Bearish views and put options

来源 / Source: S1 PDF p.58 (章节页 / section p.18); S2 answer p.100

题意 欧洲投资者预计美国股票市场未来三个月下跌，买入下列哪项最可能使其从该观点获利？

If a European investor believes the US equity market will decline in the next three months, the transaction most likely to allow the investor to profit from this view is the purchase of a:

A	看跌期权	put option.
B	看涨期权	call option.
C	货币互换	currency swap

Q100 答案 / Answer: A

看跌期权给予持有人按执行价出售标的的权利，标的价格下降通常有利于其价值。看涨期权主要受益于上涨；货币互换主要交换不同货币现金流。要取得净利润，仍须考虑下跌幅度、期权费和其他因素。

A put grants the right to sell the underlying at the strike price and generally benefits from a fall in the underlying. A call expresses a bullish position, while a currency swap exchanges currency cash flows. Actual net profit still depends on the size of the decline, the premium paid and other option-pricing factors.

易错点：买入看跌是方向匹配；股市只要下跌就一定净获利，是错误推论。

Trap: A put matches the bearish direction, but any decline does not automatically guarantee a net profit.

T5 保证金、杠杆与追缴

Margin, leverage and margin calls

对应原题 / Questions: Q117, Q119, Q120, Q115, Q133, Q123, Q124, Q130, Q136

1. 把账户拆成三部分：资产市值 V、借款 L、自有权益 E。恒等式 E=V-L。初始保证金比例 m0=E0/V0，杠杆倍数 ℓ=V0/E0=1/m0。保证金比例不是借款比例。

Split the account into asset value V, loan L and investor equity E. E=V-L. Initial margin m0=E0/V0, so leverage ℓ=V0/E0=1/m0. The margin percentage is the investor's equity fraction, not the borrowed fraction.

2. 价格变化后，借款本金通常不随股价下降，因此自有权益跌得更快。重新计算杠杆时用新的 V/E，不能继续使用初始杠杆。若忽略利息与费用，权益回报等于资产总收益（含股息）除以初始保证金比例；无股息时才可直接用价格收益。

The loan principal normally remains fixed as the stock price changes, so investor equity falls faster than the asset value. Recalculate leverage using the new V/E. Ignoring interest and fees, equity return equals the asset total return, including dividends, divided by initial margin; use price return directly only when there are no dividends.

3. 追缴点满足 (P*-L 每股)/P*= 维持保证金比例 mm，因此 P*=L 每股 /(1-mm)。若给追缴价反求 mm，就用 mm=(P*-L 每股)/P*。分母始终是当时的市值。

At the margin-call threshold, (P*-loan per share)/P*=maintenance margin mm, hence P*=loan per share/(1-mm). To infer mm, use the same equation with the threshold price. The denominator is the current position value.

4. 含利息时先还本金和利息，再算自有权益：E1= 卖出收入 + 收到股息 -L0(1+iT)- 费用。回报为 (E1-E0)/E0。第 130 题问期末权益金额，第 136 题问回报率；先认清问的是金额还是百分比。

With financing costs, first repay principal and interest: E1=sale proceeds+dividends-L0(1+iT)-fees. Return=(E1-E0)/E0. Q130 asks for ending equity in dollars; Q136 asks for a percentage return. Identify the requested output before calculating.

E = V - L

Initial leverage = V0 / E0 = 1 / initial margin

Current leverage = V / E

P* = loan per share / (1 - maintenance margin)

Equity return = (ending equity - initial equity) / initial equity

速记：先算借款，再算剩下的钱；所有收益率都除以自己的初始钱。

Memory cue: Find the loan, then the residual equity; calculate return on the investor's original equity.

Q117 杠杆与保证金

Leverage and margin

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.117

题意 融资买入证券时，杠杆倍数等于持仓价值除以什么？

For a security position purchased on margin, the leverage ratio is the ratio of the value of the position to:

A	持仓中的自有资金价值	the value of equity in the position.
B	融资借款金额	the amount of the margin loan in the position.
C	借款金额加自有资金	the amount of the margin loan plus equity in the position.

Q117 答案 / Answer: A

本章定义的杠杆是资产价值 / 权益价值，即 A / E。因为 A = D + E，也可写成 1 + D/E。它与债务权益比 D/E 不是同一指标；若分母使用 D + E，结果将始终等于 1。

Here leverage is the position's market value divided by investor equity: A / E. Since A = D + E, this also equals 1 + D/E. It is not the debt-to-equity ratio. Dividing by debt plus equity would always produce 1.

易错点：记忆：杠杆回答“每 1 元自有资金支持几元资产”。

Trap: Leverage asks how much asset exposure each unit of investor equity supports.

Q119 杠杆与保证金

Leverage and margin

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.119

题意 券商 1 的最低保证金比例为 62.5%；券商 2 的最高杠杆倍数为 1.6。券商 1 的最高杠杆与券商 2 相比如何？

Broker 1 has a minimum margin requirement of 62.5% and Broker 2 has a maximum leverage ratio of 1.6. The maximum financial leverage possible with Broker 1 is:

A	更低	less than the maximum financial leverage with Broker 2.
B	相等	equal to the maximum financial leverage with Broker 2.
C	更高	greater than the maximum financial leverage with Broker 2.

Q119 答案 / Answer: B

保证金比例 m = E / A，而杠杆 L = A / E，因此 L = 1/m。券商 1 允许的最高杠杆为 1 / 0.625 = 1.6，刚好与券商 2 相同。先把不同表达统一为同一单位再比较。

Margin m equals E/A, while leverage L equals A/E; therefore L = 1/m. Broker 1 permits maximum leverage of 1 / 0.625 = 1.6, identical to Broker 2. Convert the margin percentage into leverage before comparing.

易错点：62.5% 是自有资金占资产比例，不是借款比例。

Trap: The 62.5% margin is the equity fraction, not the borrowing fraction.

Q120 [优先练习 CORE] 杠杆与保证金

Leverage and margin

来源 / Source: S1 PDF p.62 (章节页 / section p.22); S2 answer p.120

题意 融资买入证券的最高杠杆倍数为 1.75，最低保证金比例最接近多少？

If securities are purchased on margin with a maximum leverage ratio of 1.75, the minimum margin requirement is closest to:

A	43%	43%.
B	57%	57%.
C	75%	75%.

Q120 答案 / Answer: B

最低保证金比例等于最高杠杆的倒数：m = 1 / 1.75 = 0.5714，约 57%。余下 42.86% 才是借款占持仓价值的比例。两者相加为 100%。

The minimum margin is the reciprocal of maximum leverage: m = 1 / 1.75 = 57.14%. The remaining 42.86% is the debt-financed fraction of the position. Equity and borrowing fractions sum to 100%.

易错点：A 是借款占比；C 把杠杆减 1，得到的是另一种比率。

Trap: A is the borrowing fraction; subtracting 1 from leverage does not give the margin percentage.

Q115 [优先练习 CORE] 杠杆与保证金

Leverage and margin

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.115

题意 投资者融资买入证券，自有资金为初始价格的 50%。若价格下跌 25%，其他条件不变，新的杠杆倍数最接近多少？

An investor buys a security on margin posting 50% of the initial price as equity. All else being equal, if the price declines 25%, the investor's new leverage ratio is closest to:

A	2	2.
B	3	3.
C	4	4.

Q115 答案 / Answer: B

令初始资产为 100，自有资金 50，借款 50。下跌后资产为 75，借款仍为 50，自有资金降为 25。新杠杆 = 资产 / 自有资金 = 75 / 25 = 3。价格下跌时，权益缩减更快，杠杆反而上升。

Set initial assets to 100, equity to 50, and borrowing to 50. After a 25% price decline, assets are 75 and the unchanged loan is 50, leaving equity of 25. New leverage equals 75 / 25 = 3. Falling asset prices increase leverage when debt stays fixed.

易错点：A 是初始杠杆；不要用初始保证金比例计算下跌后的杠杆。

Trap: A is the initial leverage. Recalculate current equity after the price change.

Q133 融资交易的收益率

Return on a margin trade

来源 / Source: S1 PDF p.64 (章节页 / section p.24); S2 answer p.133

题意 投资者以 30% 自有资金比例融资买入股票，股价上涨 40%。忽略未提供的融资成本，自有资金回报率最接近多少？

If the price of a stock bought on 30% margin increases by 40%, the return on equity to the buyer is closest to:

A	52%	52%.
B	75%	75%
C	133%	133%

Q133 答案 / Answer: C

初始权益占资产 30%，因此杠杆 = 1 / 0.30 = 3.3333。无利息和费用时，权益回报 = 股价回报 × 杠杆 = 40% × 3.3333 = 133.33%。例如资产由 100 涨至 140，权益由 30 涨至 70，利润 40 除以初始权益 30。

Leverage is 1 / 0.30 = 3.3333. Ignoring financing costs, equity return equals asset return times leverage: 40% × 3.3333 = 133.33%. For example, assets rise from 100 to 140 while equity rises from 30 to 70; profit of 40 divided by initial equity of 30 gives the same result.

易错点：“30% margin”是自己出 30%，不是只借 30%；有利息时要先扣利息。

Trap: A 30% margin means the investor contributes 30% equity. Deduct borrowing costs when supplied.

Q123 [优先练习 CORE] 追缴保证金

Margin calls

来源 / Source: S1 PDF p.62 (章节页 / section p.22); S2 answer p.123

题意 投资者以 $50 买入股票，初始自有资金占 30%；当价格跌破 $43.75 时首次被追缴保证金。维持保证金比例最接近多少？

A trader uses margin to purchase a stock for $50 by posting 30% equity. If the first margin call occurs when the price falls below $43.75, the maintenance margin requirement is closest to.

A	13%	13%
B	18%	18%
C	20%	20%

Q123 答案 / Answer: C

初始自有资金 = 50 × 30% = $15，借款 = 50 - 15 = $35。触发点权益为 43.75 - 35 = $8.75。维持保证金 = 当前权益 / 当前市值 = 8.75 / 43.75 = 20%。

Initial equity is $50 × 30% = $15, so the loan is $35. At the trigger price, equity equals $43.75 - $35 = $8.75. Maintenance margin is current equity divided by current position value: 8.75 / 43.75 = 20%.

易错点：分母必须用触发时股价 $43.75，不能用买入价 $50。

Trap: Divide by the price at the margin-call threshold, not by the original purchase price.

Q124 [优先练习 CORE] 追缴保证金

Margin calls

来源 / Source: S1 PDF p.62 (章节页 / section p.22); S2 answer p.124

题意 每股买入价 $50，自有资金 $25，维持保证金比例 25%。股价下跌时，触发追缴保证金的价格门槛最接近多少？

A trader buys a stock on margin with the following conditions:

Purchase price per share	$50
Equity per share	$25
Maintenance margin requirement	25%

If the share price declines, the highest price at which the trader will receive a margin call is closest to:

A	$12.50	$12.50.
B	$33.33	$33.33.
C	$37.50	$37.50.

Q124 答案 / Answer: B

每股借款 L = 50 - 25 = $25。触发时 (P - L) / P = 25%，即 P = L / (1 - 25%) = 25 / 0.75 = $33.33。此时权益约 $8.33；再跌就低于维持要求。

The loan per share is $25. At the maintenance threshold, (P - L) / P = 25%, so P = L / (1 - 0.25) = $25 / 0.75 = $33.33. Equity is about $8.33, or 25% of current market value.

易错点：维持保证金以当前市值为基数，不是初始价格，也不是仅以权益为基数。

Trap: Maintenance margin is equity divided by current market value, not initial value or equity alone.

Q130 [优先练习 CORE] 融资交易的期末权益

Ending equity in a margin trade

来源 / Source: S1 PDF p.64 (章节页 / section p.24); S2 answer p.130

题意 投资者买入 2,000 股，初始杠杆为 3，每股买入价 $12.00，一年后以 $9.50 卖出，融资年利率 3%。交易结束后的权益价值最接近多少？

A trader reports the following information about an equity investment which was sold after 1 year:

Number of shares purchased	2,000
Leverage ratio	3
Purchase price per share	$12.00
Sale price per share	$9.50
Call money rate per year	3%

The trader's equity value as a result of the trade is closest to:

A	$460	$460.
B	$2,520	$2,520.
C	$3,000	$3,000.

Q130 答案 / Answer: B

初始资产 = 2,000 × 12 = $24,000；初始权益 = 24,000 / 3 = $8,000；借款 = $16,000。利息 = 16,000 × 3% = $480。卖出收入 $19,000，归还本金与利息后，剩余权益 = 19,000 - 16,000 - 480 = $2,520。

Initial assets are 2,000 × $12 = $24,000. With leverage of 3, initial equity is $8,000 and borrowing is $16,000. Interest is $480. Sale proceeds of $19,000 leave ending equity of $19,000 - $16,000 - $480 = $2,520.

易错点：题目问期末剩余权益，不是利润；C 忽略利息，A 把杠杆误当 D/E。

Trap: The question asks for ending equity, not profit. C omits interest; A confuses A/E with D/E.

Q136 [优先练习 CORE] 融资交易的收益率

Return on a margin trade

来源 / Source: S1 PDF p.65 (章节页 / section p.25); S2 answer p.136

题意 投资者融资买入 1,000 股不派息股票，每股 $25，一年后每股 $20 卖出，融资年利率 5%，初始杠杆为 2。忽略佣金，持有期收益率最接近多少？

An investor purchases 1,000 shares of a non-dividend paying stock on margin and sells them after one year as follows:

Purchase price per share	$25
Sale price per share	$20
Annual call money rate	5%
Leverage ratio	2

Ignoring commissions, the investor's holding period return is closest to:

A	-45%	-45%.
B	-40%	-40%.
C	-23%	-23%.

Q136 答案 / Answer: A

初始资产 $25,000，自有资金与借款各 $12,500。利息 = 12,500 × 5% = $625。投资损益 = 20,000 - 25,000 - 625 = -$5,625；除以初始自有资金 $12,500，收益率为 -45%。

Initial assets are $25,000. Leverage of 2 implies equity and borrowing of $12,500 each. Interest is $625. Profit equals $20,000 - $25,000 - $625 = -$5,625. Divide by initial equity of $12,500 to obtain -45%.

易错点：B 忽略融资利息；C 除以总资产而非初始权益。

Trap: B ignores interest; C divides the loss by total assets instead of investor equity.

原稿核验：原答案选择 A 正确，但最后一行把 -5,625 / 12,500 写为 45%，漏了负号。应为 -45%。

Source check: The source correctly selects A but omits the minus sign in its final calculation. -5,625 / 12,500 equals -45%, not +45%.

第 2 章 证券市场指数

Security Market Indexes

先认权重，再认收益口径，最后判断是否需要重新平衡。

Identify the weighting rule, select price or total return, then consider rebalancing.

本章原题 / Original questions: 23 | 单元 / Units: I1, I2, I3

I1 五种权重与拆股影响

Weighting methods and stock splits

对应原题 / Questions: Q71, Q137, Q20, Q141, Q60, Q62, Q146

1. 价格加权按每股价格分配权重：wi=Pi/ΣP。市值加权按公司市值：wi=PiNi/ΣPN。等权重在重新平衡时每只股票权重为 1/n，与价格高低或公司大小无关。

Price weights are wi=Pi/ΣP. Market-cap weights are wi=PiNi/ΣPN. Equal weights are 1/n at rebalancing, regardless of stock price or company size.

2. 流通市值加权只计投资公众可买卖的股份；控股股东持股增加，其他条件不变时公众流通比例下降，可能降低该股票权重。基本面加权按利润、收入、股息等指标，不随股价同步追高；恢复目标权重时可呈现逆向交易特点。

Float-adjusted weights use shares available to public investors. More controlling ownership can lower free float and the stock’s weight. Fundamental weighting uses measures such as earnings, sales or dividends; rebalancing can create a contrarian tilt relative to price-based weights.

3. 等权重相对整个市场会低配大市值公司、高配小公司。股票拆分不改变公司总价值，却降低每股价格，因此会降低价格加权指数中的相对权重；除数调整可以避免指数水平因拆股机械跳变，但不会消除这种权重变化。

Equal weighting underrepresents large firms and overrepresents small firms relative to market value. A split lowers the share price without changing company value, reducing the stock’s relative price weight. Adjusting the divisor prevents a mechanical index-level jump but does not undo the weight change.

Price weight = stock price / sum of constituent prices

Market-cap weight = stock market cap / total index market cap

Equal weight at rebalancing = 1 / number of constituents

速记：价格权重看 P，市值权重看 P×N；指数点位不是权重分母。

Memory cue: Price weighting uses P; capitalization weighting uses P×N. Index points are not the weight denominator.

Q071 [优先练习 CORE] 市值加权公式

Market-capitalization weighting

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.71

题意 构建股票指数时，在哪一种加权方式下，公司权重取决于其已发行在外股数？

When constructing an equity index, each company's weight in the index is dependent on its number of shares outstanding if the index is:

A	价格加权	price weighted.
B	等权重	equal weighted.
C	市值加权	market-capitalization weighted

Q071 答案 / **Answer: C**

市值加权：wi = Pi × Ni / Σ(P_j × N_j)，其中 P 为股价、N 为股数。因此股数和股价共同决定权重。价格加权只按股价占所有成分价格之和的比例；等权重在设定时为 1/n。

For capitalization weighting, w_i = (P_i × N_i) / sum(P_j × N_j), where P is price and N is shares outstanding. Both share count and price matter. Price weighting uses price alone, while equal weighting assigns 1/n to each constituent at allocation.

易错点：不要把“股价高”直接等同于“市值大”。

Trap: A higher share price does not necessarily mean a larger market capitalization.

Q137 [优先练习 CORE] 市值加权

Market-capitalization weighting

来源 / Source: S1 PDF p.65 (章节页 / section p.25); S2 answer p.137

题意 一个市值加权指数有 4 只股票；某股票市值为 $20 billion，指数成分股总市值为 $57 billion。该股股价 $30，指数点位 100。该股权重最接近多少？

An analyst gathers the following information about a market-capitalization-weighted index and one of its four constituent stocks:

	总市值（十亿美元） Total Market Capitalization (in $billions)
Stock	20
Index	57

If the stock price is $30 per share and the index value is 100, the stock's weight in the index is closest to:

A	25%	25%.
B	30%	30%.
C	35%	35%.

Q137 答案 / **Answer: C**

市值加权只需计算该股市值占总市值比例：w = 20 / 57 = 35.09%。本题股票数量、股价和指数点位都是干扰信息。25% 对应等权；30 / 100 不构成有效的市值权重计算。

Market-cap weight equals the stock's capitalization divided by aggregate capitalization: 20 / 57 = 35.09%. The number of stocks, stock price, and index level are not required. A 25% weight would be equal weighting; 30 / 100 is not the market-cap weight.

易错点：市值权重分母是总市值；价格加权分母也不是指数点位。

Trap: Market-cap weighting uses total market capitalization. Even price-weighted weights do not use the index level as denominator.

原稿核验：原答案 B 的旁注把 $30 / 指数点位 100 称为价格加权权重，不严谨。价格加权权重应为 Pi / ΣPj；指数点位还含除数调整。

Source check: The source's explanation of B incorrectly treats $30 divided by the index level as a price-weighted weight. The correct weight is Pi / ΣPj; the index level also reflects its divisor.

Q020 指数权重与市场代表性

Index weighting and representation

来源 / Source: S1 PDF p.44 (章节页 / section p.4); S2 answer p.20

题意 哪种指数加权法最可能低配那些占目标市场总市值最大比例的证券？

The index weighting method that under represents securities that constitute the largest fraction of the target market value is most likely the:

A	价格加权	price-weighting method.
B	等权加权	equal-weighting method.
C	市值加权	market-capitalization-weighting method.

Q020 答案 / Answer: B

等权指数给每个成份股相同权重 1/N。与真实市场市值占比相比，大公司因此被低配、小公司被高配。市值加权直接按市值占比分配权重；价格加权取决于每股价格，而每股价格不等于公司规模。

An equal-weighted index assigns 1/N to every constituent, underweighting large companies and overweighting small companies relative to market-capitalization shares. Market-cap weighting follows those market shares. Price weighting depends on share price, which is not the same as company size.

易错点：高股价不等于高市值；市值还取决于股数。

Trap: A high share price does not necessarily imply a large market capitalization.

Q141 等权指数与再平衡

Equal weighting and rebalancing

来源 / Source: S1 PDF p.66 (章节页 / section p.26); S2 answer p.141

题意 等权指数的缺点是哪一项？

A disadvantage of an equal-weighted index is that.

A	保持等权需要频繁更换成分股	maintaining equal weights requires frequent reconstitution of the index.
B	相对于目标市场市值占比，大市值证券代表不足	securities that represent a relatively large fraction of the target market value are underrepresented.
C	相对于目标市场市值占比，小市值证券代表不足	securities that represent a relatively small fraction of the target market value are underrepresented.

Q141 答案 / Answer: B

等权让每只股票拥有相同权重，因此相对于市值加权基准，大公司权重偏低、小公司权重偏高。价格变动后要恢复等权，需要再平衡；这不等同于更换成分股。

Equal weighting assigns the same weight to each constituent. Relative to the target market's capitalization, large securities are underrepresented and small securities overrepresented. Maintaining equal weights requires rebalancing after relative price changes, not necessarily reconstituting the constituent list.

易错点：Rebalancing 调权重；reconstitution 改成员。A 用错术语。

Trap: Rebalancing changes weights; reconstitution changes membership. A uses the wrong term.

Q060 自由流通市值加权

Float-adjusted market-cap weighting

来源 / Source: S1 PDF p.51 (章节页 / section p.11); S2 answer p.60

题意 控股股东持有的股份增加，最可能影响哪一类指数的成分股权重？

An increase in shares held by controlling shareholders most likely impacts the constituent weightings of a(n):

A	价格加权指数	price-weighted index.
B	等权重指数	equal-weighted index.
C	自由流通市值加权指数	float-adjusted market-capitalization-weighted index.

Q060 答案 / Answer: C

自由流通股数排除控股股东等长期控制性持股。其他条件不变，控制性持股增加会减少公众可交易股数，使该公司的自由流通市值及相对权重改变。价格加权看价格；等权重在设定或再平衡时给各股相同权重。

Float-adjusted capitalization uses shares available to public investors, excluding controlling holdings. More shares held by controlling shareholders reduce free float, other things equal, and change the stock's index weight. Price weighting uses share prices; equal weighting assigns the same weight to each constituent at allocation or rebalancing.

易错点：总股本不变时，自由流通股本仍可能变化。

Trap: Free float can change even when total shares outstanding remain unchanged.

Q062 基本面加权与再平衡

Fundamental weighting and rebalancing

来源 / Source: S1 PDF p.51 (章节页 / section p.11); S2 answer p.62

题意 哪一类指数会在一段时间后，将组合权重从相对价格上涨的证券转向相对价格下跌的证券？

Over time, which of the following indexes most likely has portfolio weights that shift away from securities that have increased in relative value and toward securities that have fallen in relative value? A:

A	价格加权指数	price-weighted index
B	基本面加权指数	fundamentally weighted index
C	市值加权指数	market-capitalization-weighted index

Q062 答案 / Answer: B

基本面加权以销售、盈利、账面价值或股利等基本面指标设定权重。价格上涨而基本面权重未同比增加的股票，在再平衡时会被减持；相对价格下跌的股票可能被增持，因此具有逆向再平衡效应。

Fundamental indexes set target weights using measures such as sales, earnings, book value or dividends. When prices change relative to those fundamentals, rebalancing trims stocks whose prices have risen relatively and adds to those whose prices have fallen relatively. This creates a contrarian rebalancing effect.

易错点：关键是“再平衡时、相对于基本面”；不是任何下跌股票都必然加仓。

Trap: The effect occurs at rebalancing relative to fundamentals, not automatically after every price decline.

Q146 价格加权与拆股

Price weighting and stock splits

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.146

题意 高价股票拆股时，哪种指数加权方法最容易产生权重偏差？

Which of the following index weighting schemes most likely causes a bias in the index when high-priced stocks split?

A	价格加权	Price weighted
B	等权	Equal weighted
C	市值加权	Value weighted

Q146 答案 / Answer: A

价格加权的权重取决于每股价格。拆股使每股价格下降，虽然公司总市值未变，该股在指数中的相对权重却下降。调整指数除数可避免点位机械跳变，但不能消除这种权重变化。

A price-weighted index bases weights on share prices. A split lowers the share price and therefore the constituent's relative weight even though its market capitalization is unchanged. Divisor adjustment preserves index-level continuity but does not remove the weighting distortion.

易错点：除数调整解决指数点位连续性，不等于恢复拆股前的相对权重。

Trap: A divisor adjustment preserves the index level, not the stock's pre-split relative weight.

I2 指数收益与重新平衡

Index returns and rebalancing

对应原题 / Questions: Q24, Q44, Q138, Q88, Q144, Q75, Q86, Q17

1. 价格收益只看价格变动；总收益同时包括现金分配。单只股票 PR=(P1-P0)/P0，TR=(P1-P0+D)/P0。没有分配时两者相等；有正股息且其他条件一致时，总收益高于价格收益。

Price return excludes distributions; total return includes them. For one stock, PR=(P1-P0)/P0 and TR=(P1-P0+D)/P0. They are equal with no distributions; positive distributions make total return higher, all else equal.

2. 一期指数收益是各股票收益按期初权重加权。等权指数先分别算每只股票百分比，再平均；价格加权在除数不变时，可以用期末价格之和除以期初价格之和再减 1。不能把等权与平均价格混为一谈。

A one-period index return is a weighted average of constituent returns using beginning weights. For an equal-weighted index, calculate each stock’s percentage return and then average. For a price-weighted index with an unchanged divisor, use the ratio of ending to beginning price sums minus one.

3. 多期收益必须连乘：I 终 =I 初×Π(1+Rt)，不能相加。等权重随价格变化会漂移，必须定期 rebalancing 才能恢复相等；reconstitution 指调整成员名单，和调整权重不是同一件事。

Compound returns across periods: ending index=starting index×Π(1+Rt). Do not add period returns. Equal weights drift with prices and need rebalancing. Reconstitution changes membership; rebalancing restores target weights.

4. 第 17 题原表与答案有冲突，讲解会分别展示原表结果与答案使用的数据。先把第 88、138、144 题做熟，再看第 17 题作为错误识别训练。

Q17 has conflicting table and solution data. Its explanation distinguishes the literal-table result from the solution’s reconstructed data. Learn the clean mechanics from Q88, Q138 and Q144 first.

```
Total return = (ending value - beginning value + income) / beginning value

Index return = sum(beginning weight × constituent return)
```

Ending index = starting index × (1 + R1) × (1 + R2) × ...

速记：一期先加权，多期再连乘；price 不加股息，total 要加。

Memory cue: Weight across securities, compound across time; include dividends only for total return.

Q024 无分配时的指数收益

Index returns without distributions

来源 / Source: S1 PDF p.45 (章节页 / section p.5); S2 answer p.24

题意 若股票指数的成份公司没有向股东作任何分配，其总收益与价格收益相比如何？

If a stock index's constituents make no distributions to their shareholders, the total return of the index is:

A	总收益低于价格收益	less than its price return.
B	两者相等	equal to its price return.
C	总收益高于价格收益	greater than its price return.

Q024 答案 / Answer: B

总收益同时包含股价变化和股息等分配的再投资收益；价格收益只包含股价变化。没有任何分配时，额外的收入部分为零，所以两种收益相等。不能机械地认为总收益一定严格高于价格收益。

Total return includes price changes plus the reinvestment of dividends and other distributions. Price return captures only price changes. If there are no distributions, the additional income component is zero and the two returns are equal.

易错点：总收益大于价格收益，需要存在正的收入分配。

Trap: Total return exceeds price return only when there are positive income distributions.

Q044 价格指数与总收益指数

Price and total return index levels

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.44

题意 从设立日起经过一段时间后，价格版本指数的数值通常如何比较总收益版本？

As time passes after inception, the value of the price version of an index is:

A	低于总收益指数	less than the value of the total return version.
B	等于总收益指数	equal to the value of the total return version.
C	高于总收益指数	greater than the value of the total return version.

Q044 答案 / Answer: A

两种版本可以从相同基点开始。存在股息等正分配时，总收益指数把分配再投资，累计价值会高于仅反映价格变化的价格指数。因此按本题的通常派息假设选 A；若始终无分配，两者相等。

Both versions can start at the same base level. When constituents make positive distributions, the total return index reinvests them and exceeds the price index over time. A is intended under that assumption; without any distributions, the two are equal.

易错点：与 Q24 一起记：有分配通常 TR>PR；无分配 TR=PR。

Trap: Read with Q24: positive distributions make TR exceed PR; no distributions imply equality.

原稿核验：原题省略了存在收入分配的条件。答案 A 应按有股息等分配的通常情形理解，不能与 Q24 的无分配例外混淆。

Source check: The question omits the positive-distribution assumption. A applies to the usual income-paying case; Q24 states the no-distribution exception.

Q138 [优先练习 CORE] 价格收益与总收益

Price return and total return

来源 / Source: S1 PDF p.65 (章节页 / section p.25); S2 answer p.138

题意 指数期初点位为 1540，期末为 1575，本期收入为 55。总收益率最接近多少？

The beginning value for an index is 1540 and the ending value is 1575. If the income for the period is 55, the total return of the index is closest to:

A	1.3%	1.3%
B	2.2%	2.2%.
C	5.8%	5.8%.

Q138 答案 / Answer: C

总收益包含价格变化与收入：R = (1575 - 1540 + 55) / 1540 = 90 / 1540 = 5.844%。若只算 (1575 - 1540) / 1540，得到约 2.27%，那是价格收益率。

Total return includes both price appreciation and income: R = (1575 - 1540 + 55) / 1540 = 5.844%. Excluding the 55 of income gives only the price return, approximately 2.27%. Always divide by the beginning value.

易错点：总收益 = 价差 + 收入；分母用期初，不用期末。

Trap: Include income in the numerator and use the beginning index value as denominator.

Q088 [优先练习 CORE] 价格加权指数的价格收益

Price return on a price-weighted index

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.88

题意 价格加权指数含三只股票：股票 1 股数 10,000，期初价 $25，股利 $2，期末价 $20；股票 2 为 40,000、$10、$0.50、$13.50；股票 3 为 50,000、$10、$0、$14。该指数的价格收益率最接近多少？

An analyst gathers the following information about a price-weighted index composed of three stocks:

股票 Stock	流通股数 Outstanding Shares	期初价格 Beginning of Period Price	每股股利 Dividends per Share	期末价格 End of Period Price
1	10,000	$25.00	$2.00	$20.00
2	40,000	$10.00	$0.50	$13.50
3	50,000	$10.00	$0.00	$14.00

The index's price return is closest to:

A	5.6%	5.6%.
B	11.1%	11.1%.
C	25.2%	25.2%.

Q088 答案 / Answer: A

无拆股等除数调整时，价格加权指数的价格收益 =(期末价格总和 / 期初价格总和)-1。即 (20+13.5+14)/(25+10+10)-1=47.5/45-1=5.56%。价格收益不加股利；价格加权也不乘股数。

With no divisor-changing event, price return equals the change in the sum of constituent prices: (20 + 13.5 + 14)/(25 + 10 + 10) - 1 = 47.5/45 - 1 = 5.56%. Exclude dividends because the question asks for price return, and ignore share counts because the index is price weighted.

易错点：11.1% 加了股利，属于总收益；25.2% 误用了市值加权。

Trap: 11.1% includes dividends and is total return; 25.2% incorrectly uses market-cap weights.

Q144 [优先练习 CORE] 等权指数总收益

Total return of an equal-weighted index

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.144

题意 等权指数有 3 只股票：价格分别由 $10→$8、$20→$24、$30→$30；每只股票的股息收益率均为 2%。指数总收益率是多少？

An analyst gathers the following information about an equal-weighted index composed of three stocks:

股票 Stock	期初价格 Beginning-of-Period Price	期末价格 End-of-Period Price
1	$10	$8
2	$20	$24
3	$30	$30

If there is a 2% return from dividends for each of the three stocks, the total return of the index is:

A	0%	0%
B	2%	2%.
C	6%	6%.

Q144 答案 / Answer: B

三只股票价格收益率依次为 -20%、+20%、0%；加各自 2% 股息后，总收益为 -18%、22%、2%。等权指数取平均：(-18% + 22% + 2%) / 3 = 2%。

Price returns are -20%, +20%, and 0%. Adding the 2% dividend yield to each gives total returns of -18%, 22%, and 2%. The equal-weighted index return is their average: (-18% + 22% + 2%) / 3 = 2%.

易错点：A 漏掉股息；C 把各股收益相加后忘记乘以各自 1/3 的权重。

Trap: A omits dividends; C sums the three dividend contributions without applying one-third weights.

原稿核验：原答案对 C 的解释误复制了忽略股息的 A。C = 6% 的实际错误是忘了等权平均；正确答案 B 不变。

Source check: The source repeats the explanation for A when discussing C. C = 6% actually results from failing to average the equally weighted returns. B remains correct.

Q075 跨期指数收益复利

Compounding index returns

来源 / Source: S1 PDF p.54 (章节页 / section p.14); S2 answer p.75

题意 某指数三个期间的收益率分别为 12%、-8%、2%。期初指数为 100，第 3 期末指数最接近多少？

An analyst gathers the following information about a security index:

期间 Period	收益率 (%) Return (%)
1	12
2	-8
3	2

If the index's value is 100 at the beginning of Period 1, the index's value at the end of Period 3 is closest to:

A	103	103
B	105	105.
C	106	106.

Q075 答案 / **Answer: B**

不同期间收益要连乘：I3 = 100 × 1.12 × 0.92 × 1.02 = 105.1008，约 105。第 2 期末是 103.04；直接把 12%-8%+2%=6% 相加得到 106，忽略了每期计算基数的变化。

Compound sequential returns: I_3 = 100 × 1.12 × 0.92 × 1.02 = 105.1008, closest to 105. The value 103.04 is only the end of period 2. Adding 12% - 8% + 2% produces 106 incorrectly because each period's return applies to a different starting value.

易错点：同一期间组合收益加权平均；不同期间收益连乘。

Trap: Weight returns across assets within a period; compound returns across periods.

Q086 再平衡与成分重组

Rebalancing versus reconstitution

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.86

题意 下列哪些指数需要指数供应商定期进行再平衡？

Which of the following indexes are regularly rebalanced by the index provider?

A	仅价格加权指数	Price-weighted indexes only
B	仅等权重指数	Equal-weighted indexes only
C	价格加权和等权重指数都需要	Both price-weighted indexes and equal-weighted indexes

Q086 答案 / **Answer: B**

等权重指数起点各股权重相等，但不同涨跌会使权重偏离；需要卖出相对上涨者、买入相对下跌者以恢复等权重。价格加权的权重本来就随价格变动，不需要为了恢复固定权重而定期交易。

Equal-weighted constituent weights drift as prices move differently, so periodic trading restores equal weights. In a price-weighted index, weights are defined by current prices and naturally change with them; there is no fixed equal-weight target to restore. B is correct under this textbook distinction.

易错点：调整除数、处理拆股、增删成分，不等于定期恢复目标权重。

Trap: Divisor adjustments, splits and constituent changes are distinct from restoring target portfolio weights.

Q017 [原稿问题 SOURCE ISSUE] 等权指数：价格收益与总收益

Equal-weighted price and total returns

来源 / Source: S1 PDF p.44 (章节页 / section p.4); S2 answer p.17

题意 等权指数含三只证券：证券 1 期初 €20、期末 €18、股息 €1；证券 2 期初 €10、期末 €15、股息 €3；证券 3 原题显示期初 €15、期末 €0、股息空白。答案页却使用证券 3 期末 €21、股息 €0。问价格收益最接近多少？

An analyst gathers the following information about an equal-weighted index composed of three securities:

证券 Security	期初价格（欧元） Beginning of Period Price (€)	期末价格（欧元） End of Period Price (€)	股利总额（欧元） Total Dividends (€)
1	20	18	1
2	10	15	3
3	15	0	

The price return of the index is closest to:

A	20%	20%
B	27%	27%.
C	38%	38%.

Q017 原答案 **B** | 按答案页重建数据时成立 / **B with reconstructed data**

依答案页重建数据：三只证券价格收益依次为 18/20-1=-10%、15/10-1=50%、21/15-1=40%，等权平均 =(-10%+50%+40%)/3=26.67%，故选 B。若问总收益，则把股息加到期末价格，平均为 38.33%。

Using the data reconstructed from the solution, the individual price returns are -10%, 50%, and 40%. Their equal-weighted average is 26.67%, so B is intended. Including dividends would produce total returns of -5%, 80%, and 40%, averaging 38.33%.

易错点：等权是平均各股票收益率，不是先把价格相加；价格收益不含股息。

Trap: Average the individual returns for equal weighting, and exclude dividends from price return.

原稿核验：原题表格第三行与答案页不一致：原题按期末 €0 字面计算得到 -20%，没有匹配选项。本讲义明确采用答案页的 €21 作示例重建，并保留原始问题说明。

Source check: The original third row conflicts with the solution. Taking the displayed €0 ending price literally gives -20%, which matches no option. The worked example explicitly uses the solution's reconstructed €21.

I3 指数分类、用途与数据偏差

Index categories, uses and data limitations

对应原题 / Questions: Q70, Q80, Q91, Q105, Q38, Q43, Q54, Q64

1. 指数可作为资产配置中资产类别的代理、经理业绩基准和估计 beta 的市场代表。全球组合应配全球多市场基准；按大 / 中 / 小市值或成长 / 价值划分的通常是风格指数，按行业划分的为行业指数。

Indexes can proxy asset classes, benchmark managers and represent the market when estimating beta. A global portfolio needs a suitable multi-market benchmark. Size and growth/value classifications are style indexes; industry classifications form sector indexes.

2. 股权与固定收益指数都可按发行人所属经济行业分类。债券品种多、交易不活跃、不断到期与新发，因此复制与价格观察通常更困难，部分成分券需要估值定价。

Both equity and fixed-income indexes can be classified by issuer sector. The bond universe is large, many issues trade infrequently, and issues mature or are added continually, making replication and price observation difficult; some constituents require estimated prices.

3. 本题库的商品指数通常指期货合约组合。对冲基金指数依赖数据库和自愿报告，可能受选择、回填和存续偏差影响；不同提供商的成分重合度可能很低。不能把指数名称相似当作底层资产相同。

The commodity indexes in this question set are based on futures contracts. Hedge fund indexes depend on databases and voluntary reporting, with potential selection, backfill and survivorship biases. Different providers can have limited constituent overlap.

速记：基准要匹配投资范围；不同资产的指数不一定容易复制。

Memory cue: Match the benchmark to the mandate; not every asset-class index is easy to replicate.

Q070 指数在资产配置中的用途

Indexes as asset-class proxies

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.70

题意 证券市场指数最可能用来作为下列哪一项的替代指标？

Security market indices most likely serve as proxies for.

A	非系统性风险	nonsystematic risk
B	资产配置模型中的资产类别	asset classes in asset allocation models.
C	资产基础估值模型中的资产公允价值	the fair value of assets in asset-based valuation models.

Q070 答案 / **Answer: B**

广泛市场指数可以代表某类资产的收益和风险，例如股票、债券或某地区市场，便于比较和配置。非系统性风险是个别公司风险，可通过分散投资降低；单家公司资产的公允价值需要针对其资产负债估计。

Broad indexes proxy the return and risk of asset classes in allocation models, such as equities, bonds or regional markets. Nonsystematic risk is company-specific and can be diversified. Asset-based valuation instead requires estimates for a particular company’s assets and liabilities, not a broad market index.

易错点：指数可作为市场基准，不是每家公司特有风险的直接替代。

Trap: A market benchmark is not a direct proxy for each company’s idiosyncratic risk.

Q080 基准与投资范围匹配

Matching a benchmark to the investment universe

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.80

题意 多市场指数最适合用作下列哪一种用途的基准？

A multi-market index is most appropriately used as a benchmark:

A	单一国家 ETF 的基准	for a single country ETF.
B	小盘成长股经理的基准	for a small-capitalization growth stock manager.
C	计算全球股票经理组合的 beta	to calculate beta for the portfolio of a global stock manager.

Q080 答案 / **Answer: C**

基准应覆盖组合的实际投资范围。全球股票组合横跨多个国家或地区，用多市场指数作为市场代理来估计 beta 较合理。单一国家 ETF 应配该国指数；小盘成长策略应配对应规模和风格指数。

A benchmark should match the portfolio’s investment universe. A multi-market index covers several countries or regions and is appropriate as the market proxy for a global equity manager’s beta. A single-country ETF needs a country benchmark; a small-cap growth mandate needs a matching style benchmark.

易错点：先识别组合“投资哪里、投什么风格”，再选基准。

Trap: Identify the portfolio’s geography and style before selecting its benchmark.

Q091 世界指数与多市场指数

World versus multi-market indexes

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.91

题意 世界股票指数最可能属于哪一种指数？

A world equity index is most likely considered a:

A	风格指数	style index
B	行业板块指数	sector index.
C	多市场指数	multi-market index.

Q091 答案 / **Answer: C**

世界指数覆盖多个国家或地区的股票市场，因此属于多市场指数。风格指数按小盘 / 大盘、价值 / 成长等特征分组；板块指数追踪某一经济板块。是否覆盖全球与是否针对特定风格或行业，是不同的分类维度。

A world equity index spans multiple national or regional stock markets and is therefore a multi-market index. Style indexes group securities by characteristics such as size, value or growth. Sector indexes follow a specific economic sector. The global geographic scope is the deciding clue here.

易错点：World 描述地域覆盖，不直接说明 value/growth 或行业。

Trap: World describes geographic coverage, not a value/growth style or a particular sector.

Q105 指数分类

Types of equity indexes

来源 / Source: S1 PDF p.59 (章节页 / section p.19); S2 answer p.105

题意 根据市值大小对证券分类而编制的股票指数，最可能属于哪一类？

An equity index representing groups of securities classified on the basis of market capitalization is most likely a:

A	风格指数	style index
B	行业指数	sector index.
C	多市场指数	multi-market index.

Q105 答案 / Answer: A

风格指数按市值、价值或成长等投资风格分类，所以大盘、中盘、小盘指数都属于风格分类。行业指数按经营领域分类；多市场指数则把多个国家或地区的市场合并。

Style indexes classify securities by market capitalization, value, growth, or combinations of these characteristics. A small-cap or large-cap index is therefore a style index. Sector indexes classify economic activities; multi-market indexes combine national or regional markets.

易错点：看到 market capitalization 分类，先联想到 size/style，而不是 sector。

Trap: Market-capitalization categories indicate size/style, not economic sectors.

Q038 股票与债券指数分类

Classifying equity and fixed-income indexes

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.38

题意 股票指数与固定收益指数都可以按照以下哪个标准分类？

Both equity and fixed income indexes can be categorized according to the:

A	支付货币	currency of payments.
B	发行人的经济行业	issuer's economic sector.
C	通胀保护程度	degree of inflation protection.

Q038 答案 / Answer: B

股票与债券都由特定行业的发行人发行，因此都可以按金融、工业、能源等行业划分指数。支付货币和通胀保护是本题强调的固定收益证券分类维度；行业分类则是两种资产指数的共同维度。

Both equities and bonds can be grouped by the economic sector of their issuers. The question treats payment currency and inflation protection as fixed-income classification features. Issuer sector is the clearly shared basis among the choices.

易错点：抓住“both”：要选两种资产都直接适用的共同分类。

Trap: Focus on the shared characteristic required by the word “both.”

Q043 债券指数的定价与复制

Pricing and replicating fixed-income indexes

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.43

题意 以下关于固定收益指数的说法，哪项最可能正确？

Fixed-income indexes most likely.

A	比股票指数更容易复制	are more easily replicated than equity indexes.
B	指数提供者需要估计部分成份证券的价格	require the provider to estimate the prices of some constituent securities.
C	可供选择的证券数量少于股票指数	are created from a smaller universe of possible constituent securities than the universe of equity securities.

Q043 答案 / Answer: B

债券品种多、许多个券成交不频繁，指数编制者未必能取得每只债券的即时成交价，往往需要交易商报价或参照类似债券估值。成份数量与流动性问题也使完全复制通常比股票指数更困难。

There are many individual bonds, and many trade infrequently. Providers may rely on dealer quotes or estimated prices based on similar traded securities. The large constituent universe and limited liquidity also make full replication generally harder than for equity indexes.

易错点：没有当天成交价，不代表指数可以不更新该债券价值。

Trap: An absence of trades does not remove the need to value the constituent.

Q054 另类投资指数

Alternative investment indexes

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.54

题意 下列哪一种指数由期货合约构成？

Which of the following indexes is composed of futures contracts?

A	商品指数	Commodity index
B	对冲基金指数	Hedge fund index
C	广泛股票市场指数	Broad equity market index

Q054 答案 / Answer: A

本题所指的可投资商品指数以一种或多种商品的期货合约构成，因此其收益会受到期货价格和展期等因素影响。对冲基金指数汇总基金收益；广泛股票指数的成分是股票，并不是直接持有商品期货的指数。

The investable commodity indexes considered here hold futures contracts on one or more commodities. Their returns therefore depend on futures exposure, including roll effects. Hedge fund indexes aggregate fund returns, while broad equity indexes represent stocks. A fund holding futures does not make a hedge fund index itself a futures-contract index.

易错点：“基金可能交易期货”不等于“指数成分就是期货”。

Trap: A fund may trade futures without futures being the constituents of its fund index.

Q064 对冲基金指数偏差

Hedge fund index biases

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.64

题意 下列哪项最准确描述对冲基金指数？

Which of the following statements best describes hedge fund indexes?

A	指数成分均是受监管实体	Index constituents are regulated entities
B	自愿报告业绩会减少潜在生存者偏差	Potential survivorship bias is reduced by voluntary performance reporting
C	不同指数供应商的指数成分可能很少重合	There may be little overlap in index constituents between different indexes offered by different index providers

Q064 答案 / Answer: C

对冲基金的业绩数据库依赖基金提供数据，不同供应商收录的基金可能差异很大，因此指数成分和表现可不相同。自愿报告还可能带来选择偏差及生存者偏差；不能因为有指数就假设其覆盖完整或所有成分具有相同监管状态。

Hedge fund databases can contain very different reporting populations, so indexes from different providers may have little constituent overlap. Voluntary reporting can introduce selection and survivorship biases rather than eliminating them. Index membership does not establish complete industry coverage or a uniform regulatory status for all funds.

易错点：同称“全球对冲基金指数”，未必代表相同基金群体。

Trap: Two global hedge fund indexes need not represent the same fund population.

原稿核验：原答案将对冲基金概括为“不受监管实体”。学习时不宜把这当作所有司法管辖区的绝对法律事实；本题真正考点是数据库覆盖差异与报告偏差。

Source check: The source broadly labels hedge funds unregulated. Do not treat that as an absolute legal statement across jurisdictions; the tested point is database coverage and reporting bias.

第 3 章 市场效率与行为金融

Market Efficiency and Behavioral Finance

把信息集合、可用策略和异常现象放在同一套判断框架里。

Connect each information set to feasible strategies and distinguish anomalies from rational risk preferences.

本章原题 / Original questions: 21 | 单元 / Units: E1, E2, E3

E1 三种有效市场形式

The three forms of market efficiency

对应原题 / Questions: Q69, Q65, Q83, Q85, Q139, Q40

1. 弱式有效：价格反映历史价格与成交量等市场数据，靠这些数据反复获得扣成本后的风险调整超额回报不成立；公开基本面信息仍可能有用，但不保证成功。

Weak-form efficiency incorporates historical market data such as prices and volumes. Trading these patterns should not consistently earn abnormal risk-adjusted returns after costs. Public fundamental information may still be useful, without guaranteeing success.

2. 半强式有效：所有公开信息都已反映，包括历史市场数据、财报和公开新闻。强式有效：连私人信息也已反映。信息集合逐层包含，不是三个互斥市场标签。

Semi-strong efficiency incorporates all public information, including past market data, financial reports and public news. Strong-form efficiency also incorporates private information. The information sets are nested.

3. 有效市场对意外信息作出反应；已经完全预期到的内容本身不应再次引起系统性重估。有效不表示价格从不波动，也不表示每位投资者在每一期回报相同。

An efficient market reacts to surprises. Fully anticipated information should not by itself cause another systematic repricing. Efficiency does not imply constant prices or identical realized returns for all investors.

速记：弱式 = 过去市场数据；半强式 = 所有公开信息；强式 = 公开加私人。

Memory cue: Weak: past market data. Semi-strong: all public information. Strong: public and private information.

Q069 [优先练习 CORE] 弱式市场有效性

Weak-form efficiency

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.69

题意 弱式有效市场假说要求证券价格反映下列哪些信息？

In a weak-form efficient market, which of the following information is reflected in security prices?

A	仅历史价格	Historical prices only
B	仅历史价格及历史成交量	Historical prices and historical trading volumes only
C	历史价格、历史成交量及当前盈利	Historical prices, historical trading volumes, and current earnings

Q069 答案 / Answer: B

弱式有效的定义针对过去的市场交易数据，包括历史价格和成交量。它不要求价格已经充分吸收当前盈利等全部公开基本面信息。A 漏掉成交量；C 超出了弱式假说要求的信息集合，因此选 B。

Weak-form efficiency requires prices to reflect past market data, including historical prices and trading volumes. It does not require full incorporation of current earnings and all other public fundamentals. A omits volume; C goes beyond the weak-form requirement. B describes the relevant information set.

易错点：弱式“不要求反映全部公开信息”，不等于现实中价格完全不含任何盈利信息。

Trap: Not requiring all public information is different from saying prices contain no earnings information.

Q065 [优先练习 CORE] 半强式市场有效性

Semi-strong-form efficiency

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.65

题意 如果证券价格充分反映所有公开且可获得的信息，但未反映私人信息，这是什么形式的有效市场？

A market where security prices fully reflect all publicly known and available information, but not private information, is:

A	弱式有效	weak-form efficient.
B	半强式有效	semi-strong-form efficient.
C	强式有效	strong-form efficient.

Q065 答案 / Answer: B

按信息集合判断：弱式涵盖历史价格及成交量；半强式涵盖全部公开信息，包括历史交易资料、财报和公告；强式进一步涵盖私人信息。题目明确“所有公开、但不含私人”，因此属于半强式。

Classify efficiency by its information set. Weak-form efficiency reflects historical market data. Semi-strong efficiency reflects all public information, including that historical data, financial reports and announcements. Strong-form efficiency also includes private information. All public but not private information therefore identifies the semi-strong form.

易错点：三个信息集合逐层包含，不能把半强式与历史资料割裂。

Trap: The information sets are nested: semi-strong efficiency includes historical market information.

Q083 [优先练习 CORE] 强式市场有效性

Strong-form efficiency

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.83

题意 根据有效市场假说，如果价格反映私人信息，市场最可能属于哪种有效形式？

According to the efficient market hypothesis, if market prices reflect private information, the market is most likely

A	强式有效	strong-form efficient.
B	仅弱式有效	weak-form efficient only.
C	半强式有效，但并非强式有效	semi-strong-form efficient, but not strong-form efficient.

Q083 答案 / Answer: A

强式有效的信息集合最广，既包含历史交易信息、所有公开信息，也包含私人信息。若连私人信息都已充分反映，拥有内幕信息也无法凭该信息持续赚取超额收益；弱式和半强式本身都不要求这一点。

Strong-form efficiency incorporates the broadest information set: past market data, all public information and private information. If even private information is fully reflected, insiders cannot consistently earn abnormal returns from that information. Weak and semi-strong efficiency do not impose that requirement.

易错点：Private information 是识别强式有效的关键词。

Trap: Private information is the key clue for strong-form efficiency.

Q085 有效性与基本面分析

Efficiency and fundamental analysis

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.85

题意 在哪一种市场有效性形式下，投资者仍可能通过基本面分析持续跑赢市场？

In which of the following forms of market efficiency are investors able to consistently outperform the market using fundamental analysis?

A	弱式有效	Weak-form market efficiency
B	半强式有效	Semi-strong-form market efficiency
C	强式有效	Strong-form market efficiency

Q085 答案 / Answer: A

弱式有效只要求历史价格和成交量已被价格反映，未要求所有公开基本面信息都被充分消化，所以基本面分析仍可能产生超额收益。半强式与强式包含所有公开信息，不能靠这些信息持续获得风险调整后的超额收益。

Weak-form efficiency rules out persistent abnormal profits from past market data but does not require all public fundamentals to be fully incorporated. Fundamental analysis may therefore add value. Semi-strong and strong efficiency incorporate public information, ruling out consistent risk-adjusted abnormal returns from using that information alone.

易错点：“仍可能”不等于基本面分析必然跑赢；弱式也已否定历史图形的持续优势。

Trap: Possible outperformance is not guaranteed; weak-form efficiency already removes persistent historical-pattern advantages.

Q139 弱式有效与历史信息

Weak-form efficiency and past prices

来源 / Source: S1 PDF p.65 (章节页 / section p.25); S2 answer p.139

题意 若投资者可以利用过去价格成功预测未来资产价格，市场最可能属于什么状态？

If investors can successfully predict future asset prices based on past prices, markets are most likely.

A	无效率	inefficient.
B	仅弱式有效	weak-form efficient only.
C	半强式有效	semi-strong-form efficient.

Q139 答案 / Answer: A

按本题语境，过去价格可被系统性利用，意味着历史交易信息尚未充分反映在当前价格中，因此连弱式有效也不满足。半强式包含弱式信息要求，自然也不符合。

In the question's intended context, exploitable predictability from past prices means historical market information is not fully incorporated, violating weak-form efficiency. Semi-strong efficiency includes the weak-form information set, so it would also be inconsistent with this premise.

易错点：严格检验效率时，要看能否持续获得扣除成本后的风险调整超额收益；有一定可预测性本身不必然是可套利的低效率。

Trap: A rigorous efficiency test asks whether predictability generates persistent risk-adjusted excess returns after costs, not merely whether some price component is forecastable.

Q040 有效市场与信息反应

Efficient markets and information

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.40

题意 有效市场具有以下哪个特征？

A feature of an efficient market is that:

A	市场价格反映过去及现在的信息	the market reflects all past and present information.
B	价格对完全预期之内的信息发生反应	asset prices react to information that is fully anticipated.
C	投资者可持续赚取超额风险调整收益	an investor can earn consistent, superior, risk-adjusted returns.

Q040 答案 / Answer: A

有效市场把相关可用信息及时反映到价格中，因此公告中的“已被预期部分”不应成为新的价格冲击；真正驱动价格变化的是意外信息。持续、扣费后、风险调整的超额收益难以仅靠已反映的信息获得。

An efficient market incorporates the relevant information set into prices. Fully anticipated news is already reflected, so price changes respond to its unexpected component. Consistent superior risk-adjusted returns after costs cannot be obtained merely by exploiting information already priced in.

易错点：市场有效不等于价格不波动；新信息仍会让价格变化。

Trap: Efficiency does not imply constant prices: new information still changes value.

原稿核验：A 是原题预期答案；严格表述应注明相关信息集合，弱式、半强式和强式效率所覆盖的信息不同。

Source check: A is the intended answer. More precisely, efficiency is defined relative to an information set, which differs across weak, semi-strong, and strong forms.

E2 提高效率的条件与投资含义

Drivers of efficiency and investment implications

对应原题 / Questions: Q39, Q41, Q76, Q145, Q66, Q79, Q67

1. 更多参与者、更充分的信息披露、更低交易成本和更少交易障碍，通常有助价格反映信息。限制卖空或外国投资者参与，会减少纠正误价的力量；套利交易则倾向缩小价格差异。

More participants, better disclosure, lower transaction costs and fewer trading barriers generally improve price discovery. Restrictions on short selling or foreign participation can weaken correction of mispricing. Arbitrage tends to reduce pricing discrepancies.

2. 若公开信息已充分反映，在风险暴露相当的前提下，被动策略可通过减少研究费和交易费提高扣费后结果。不能据此推断任何被动组合的绝对收益必然高于任何主动组合。

If public information is already reflected, a passive strategy can improve net outcomes by saving research and trading costs, assuming comparable risk exposure. This does not guarantee that every passive portfolio beats every active portfolio in absolute returns.

3. 基本面分析帮助理解信息怎样影响价值，并参与价格发现；即使半强式有效使持续超额收益难得，也不意味着分析没有功能。

Fundamental analysis interprets the value implications of information and contributes to price discovery. Difficulty earning persistent excess returns under semi-strong efficiency does not make analysis functionless.

速记：看见“限制”，先分清限制的是交易成本，还是限制交易本身。

Memory cue: When the stem says “limits,” distinguish lower costs from restrictions on trading.

Q039 套利与市场效率

Arbitrage and market efficiency

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.39

题意 套利者的交易最可能产生什么影响？

Trading by arbitrageurs most likely.

A	减少流动性	reduces liquidity.
B	扩大定价差异	increases pricing discrepancies.
C	提高市场效率	contributes to market efficiency.

Q039 答案 / Answer: C

套利者买入相对便宜的资产，同时卖出相对昂贵的可比资产，推动价格偏差收敛。其交易也让不同市场中的买卖更容易匹配，从而有助于流动性和价格发现。因此套利通常提高市场效率。

Arbitrageurs buy relatively underpriced assets and sell relatively overpriced counterparts, helping pricing discrepancies converge. Their activity can also connect liquidity across markets and improve price discovery. This process generally contributes to market efficiency.

易错点：套利利用价差，但其交易会使价差缩小。

Trap: Arbitrage exploits discrepancies while helping eliminate them.

Q041 交易成本与效率

Transaction costs and efficiency

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.41

题意 以下哪项增加，最可能降低市场效率？

Decreased market efficiency is most likely associated with an increase in:

A	交易成本	transaction costs.
B	财务信息披露	financial disclosure.
C	市场参与者数量	the number of market participants.

Q041 答案 / Answer: A

发现错价后还必须能够获利交易。若交易成本上升，小幅错价即使存在，也可能不足以覆盖费用，套利者便不会修正它。更多信息披露和更多积极参与者通常有助于发现并消除定价偏差。

A pricing discrepancy must be large enough to cover trading and information costs before investors can profit from correcting it. Higher transaction costs allow more discrepancies to persist. More disclosure and active market participants generally improve discovery and correction of mispricing.

易错点：判断可利用错价，应看扣除费用后的风险调整收益。

Trap: Evaluate exploitable mispricing using risk-adjusted returns after costs.

Q076 交易成本与信息效率

Trading costs and informational efficiency

来源 / Source: S1 PDF p.54 (章节页 / section p.14); S2 answer p.76

题意 如果交易成交成本增加，市场的信息效率最可能怎样变化？

If the cost to fill trades increases, the market's informational efficiency most likely.

A	下降	decreases.
B	不变	remains the same.
C	上升	increases.

Q076 答案 / Answer: A

知情投资者只有在预期收益足以覆盖研究和交易成本时，才有动力搜集信息并交易。成交成本提高会减少这类活动，使新信息更难通过交易反映到价格中，所以信息效率倾向下降。

Informed traders need expected gains to cover research and trading costs. Higher execution costs reduce the incentive to collect information and trade on it. With less informative research and trading, prices incorporate fundamental information less effectively, so informational efficiency tends to decline.

易错点：低成本、充足流动性通常有助于信息进入价格。

Trap: Lower execution costs and adequate liquidity generally help information enter prices.

Q145 提升市场效率的因素

Factors improving market efficiency

来源 / Source: S1 PDF p.67 (章节页 / section p.27); S2 answer p.145

题意 对以下哪项设置上限或限制，最可能提高市场效率？

Which of the following factors would most likely increase market efficiency? Limits on:

A	卖空	short selling
B	交易成本	transaction costs
C	境外投资者交易	trading by foreign investors

Q145 答案 / Answer: B

本题 limits on transaction costs 指压低交易成本。成本较低使投资者更愿意根据新信息交易和套利，有助于价格反映信息。限制卖空或外国投资者参与则可能削弱纠正错误定价的交易力量。

Here limits on transaction costs means keeping trading costs low. Lower costs make information-based trading and arbitrage more feasible, helping prices incorporate information. Restrictions on short selling or foreign participation can instead impede the trades that correct mispricing.

易错点：同一个 limits on：限制成本可促进交易，限制参与者或策略可能抑制交易。

Trap: Limiting costs can facilitate trading; limiting participation or short selling can obstruct it.

Q066 有效市场与被动投资成本

Efficiency and passive-investing costs

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.66

题意 在高度有效的市场中，被动投资策略最可能具有什么特征？

In a highly efficient market, a passive investment strategy most likely has:

A	交易成本高于主动策略	higher transaction costs than an active strategy.
B	搜集信息成本低于主动策略	lower information-seeking costs than an active strategy.
C	扣除全部费用前的风险调整收益高于主动策略	higher risk-adjusted returns before all expenses than an active strategy.

Q066 答案 / Answer: B

高度有效的市场中，主动研究不容易持续找到可获利的错误定价。被动策略减少研究、信息搜集与交易活动，因此成本通常较低；优势主要体现在费用后的收益，而不是能够保证费用前的风险调整收益更高。

In a highly efficient market, persistent exploitable mispricing is difficult to find. Passive investing generally requires less information gathering, research and trading, reducing costs. Its main advantage is therefore expected performance after expenses, not a guarantee of superior risk-adjusted returns before expenses.

易错点：看清 before expenses 与 after expenses。

Trap: Distinguish returns before expenses from returns after expenses.

Q079 半强式有效与主动 / 被动策略

Semi-strong efficiency and strategy choice

来源 / Source: S1 PDF p.54 (章节页 / section p.14); S2 answer p.79

题意 长期来看，如果市场是半强式有效的，下列哪一种策略最可能为投资者带来最高回报？

Over the long run, if a market is semi-strong-form efficient, which of the following investment strategies should result in the highest return to investors? A(n):

A	被动投资策略	passive investment strategy
B	试图利用价格形态的主动交易策略	active trading strategy seeking to exploit price patterns
C	试图利用公开信息的主动交易策略	active trading strategy seeking to exploit public information

Q079 答案 / Answer: A

半强式有效意味着公开信息与历史价格已反映在价格中，利用这两者的主动策略难以持续取得超额收益。在风险敞口可比的前提下，被动策略通常研究与交易成本较低，因此预期扣费后表现更有优势。

Semi-strong efficiency means that public information, including historical prices, is reflected in prices. Trading patterns or public news should not consistently produce abnormal returns. At comparable risk exposures, passive strategies generally have lower research and trading costs and therefore an expected advantage after costs.

易错点：这不是保证每期或任何风险水平下，被动策略的绝对回报都最高。

Trap: This is not a guarantee of the highest absolute return in every period or at every risk level.

Q067 基本面分析的作用

Role of fundamental analysis

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.67

题意 基本面分析最可能具有下列哪种作用？

Fundamental analysis most likely.

A	利用股价形态交易	uses stock price patterns to trade.
B	作为被动组合管理的输入	is an input for passive portfolio management.
C	帮助参与者理解信息对价值的影响	helps participants understand the value implications of information.

Q067 答案 / Answer: C

基本面分析研究盈利、现金流、增长与风险，估计信息会怎样改变公司的内在价值。价格形态属于技术分析；被动管理通常以复制基准为目标。基本面研究与交易可推动信息进入价格，是有效市场形成过程的一部分。

Fundamental analysis assesses earnings, cash flows, growth and risk to understand how information affects intrinsic value. Trading price patterns is technical analysis, while passive management generally aims to track a benchmark. Fundamental research helps information become reflected in prices and supports a well-functioning market.

易错点：市场有效不表示基本面研究没有社会作用。

Trap: Efficiency does not imply that fundamental research has no role in price formation.

E3 市场异常与行为偏差

Pricing anomalies and behavioral biases

对应原题 / Questions: Q5, Q134, Q109, Q121, Q125, Q23, Q45, Q111

1. 价值效应：低估值、高股息股票相对成长股表现更好；规模效应：小市值股票的风险调整表现优于大市值。两者是按证券特征横向分类。动量与一月效应则属于时间序列或日历类现象。

The value effect concerns low-multiple, high-yield stocks outperforming growth stocks; the size effect concerns superior risk-adjusted small-cap performance. These are cross-sectional effects. Momentum and January effects concern return patterns across time or the calendar.

2. 保守偏差指新信息出现后仍过度坚持原有判断；过度反应指价格对新闻调整过头；羊群行为指跟随群体；代表性偏差指过度根据典型印象或小样本作判断。

Conservatism is insufficient updating of prior beliefs. Overreaction is excessive response to news. Herding follows the crowd. Representativeness overrelies on perceived patterns, stereotypes or small samples.

3. 损失厌恶是对损失比同额收益更敏感；过度自信是高估自己的判断。风险厌恶本身可以是合理偏好，不能直接当作行为偏差。发现统计异常也不等于已经得到可获利策略，还要考虑风险、成本和样本问题。

Loss aversion gives disproportionate weight to losses; overconfidence overstates judgment or ability. Risk aversion can be a rational preference. A statistical anomaly is not automatically a tradable profit after accounting for risk, costs and sample issues.

速记：看到新闻后涨过头，选 overreaction；不是因为提到年末就选日历效应。

Memory cue: A price overshooting after news indicates overreaction; a year-end date alone does not establish a calendar effect.

Q005 价值效应

Value effect

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.5

题意 市场中的价值效应，是指市盈率与市净率低于平均、股息率高于平均的股票，持续跑赢哪类股票？

The value effect market-pricing anomaly most likely occurs when stocks that have below-average price-to-earnings and market-to-book ratios, as well as above-average dividend yields, consistently outperform:

A	大市值股票	large-cap stocks.
B	成长股	growth stocks.
C	出现负面盈利意外的股票	stocks that have had negative earnings surprises.

Q005 答案 / **Answer: B**

低 P/E、低 P/B 和高股息率通常描述价值股。价值效应是价值股长期相对成长股表现更好。小盘股相对大盘股的表现属于规模效应，盈利公告后的反应则属于盈利意外相关异象。

Low P/E, low price-to-book, and high dividend yield typically identify value stocks. The value effect describes their persistent outperformance of growth stocks. Small-versus-large stock performance is the size effect, while responses to unexpected earnings concern earnings-surprise anomalies.

易错点：先识别比较对象：value 对 growth；small 对 large。

Trap: Identify the comparison: value versus growth, and small versus large.

Q134 规模效应

The size effect

来源 / Source: S1 PDF p.64 (章节页 / section p.24); S2 answer p.134

题意 规模效应异象指在风险调整后，小市值股票通常表现如何？

The size effect anomaly results when it is observed that on a risk-adjusted basis small cap companies tend to:

A	跑输大市值股票	underperform equities of large-cap companies.
B	与大市值股票表现一致	perform in line with equities of large-cap companies.
C	跑赢大市值股票	outperform equities of large-cap companies.

Q134 答案 / Answer: C

规模效应是历史研究中小盘股在风险调整后收益高于大盘股的观察，属于横截面异象，因为它按公司规模比较不同股票。这里考定义，并不是说任意小盘股或每一个时期都一定跑赢。

The size effect describes historical evidence of small-cap stocks outperforming large-cap stocks on a risk-adjusted basis. It is a cross-sectional anomaly because it compares securities grouped by size. The definition does not imply that every small stock wins in every period.

易错点：Small minus large 是定义方向；记得题目已要求风险调整。

Trap: Remember the direction: small-cap outperformance after risk adjustment.

Q109 市场异象分类

Classification of market anomalies

来源 / Source: S1 PDF p.60 (章节页 / section p.20); S2 answer p.109

题意 一月效应属于以下哪一种现象？

The January effect is an example of.

A	损失厌恶	loss aversion.
B	盈利意外	an earnings surprise.
C	市场定价异象	a market pricing anomaly.

Q109 答案 / Answer: C

一月效应是某些历史样本中一月收益异常偏高的日历或时间序列异象，又称年初效应。损失厌恶是行为偏差；盈利意外指实际盈利超出或低于市场预期，并不是一月效应。

The January effect is a calendar or time-series pricing anomaly: unusually high January returns observed in some historical samples. It is also called the turn-of-the-year effect. Loss aversion is a behavioral bias; an earnings surprise is unexpected earnings news.

易错点：“一月”提示日历效应。历史异象不等于今后每年都能获利。

Trap: January identifies a calendar pattern; a historical anomaly does not guarantee future profits.

原稿核验：原答案 B 的解释把 earnings surprise
本身称为异象，表述过宽。意外消息导致价格及时调整符合有效市场；持续漂移或不恰当反应才可能构成异象。

Source check: The source overstates matters by calling an earnings surprise itself an anomaly. Prompt repricing on unexpected news is consistent with efficiency; drift or inappropriate reaction may indicate an anomaly.

Q121 市场异象分类

Classification of market anomalies

来源 / Source: S1 PDF p.62 (章节页 / section p.22); S2 answer p.121

题意 下列哪项最适合归类为时间序列异象？

Which of the following market anomalies is best described as a time-series anomaly?

A	规模效应	Size effect
B	动量	Momentum
C	首次公开发行异象	Initial Public Offerings

Q121 答案 / Answer: B

动量描述过去一段时间的价格趋势在随后一段时间继续，因此属于沿时间观察到的规律。规模效应比较同一时期不同规模股票，属于横截面异象；IPO 异象通常单独归入其他异象。

Momentum describes past price movements continuing in the same direction, so it is a time-series anomaly. The size effect compares groups of securities across the cross-section. IPO-related anomalies are usually classified separately as other anomalies.

易错点：时间序列看“同一资产前后”；横截面看“同一时期不同资产”。

Trap: Time-series patterns compare returns over time; cross-sectional patterns compare securities or groups.

Q125 过度反应异象

Overreaction anomaly

来源 / Source: S1 PDF p.63 (章节页 / section p.23); S2 answer p.125

题意 一家大盘公司在年末发布意外利好后，股价被推高至过高水平。最可能对应哪项异象？

The observation that a large-capitalization company's stock price is inflated after the company releases unexpected good news at year end is most likely related to the:

A	价值效应	value effect
B	过度反应效应	overreaction effect.
C	年初效应	turn-of-the-year effect.

Q125 答案 / Answer: B

关键词是利好之后股价“被高估”，意味着涨幅超过新信息应带来的合理价值变化，属于过度反应。年末只是背景，不足以判定年初效应；价值效应讨论低估值风格股票的长期相对收益。

The key is that the price becomes inflated after unexpected good news: it overshoots the value justified by the information. That is overreaction. A year-end date alone does not establish a turn-of-the-year anomaly; the value effect concerns returns on value stocks.

易错点：好消息后上涨本身不异常；超出合理价值的反应才是本题重点。

Trap: A price rise after good news is normal; an excessive rise beyond updated intrinsic value is the issue.

Q023 [优先练习 CORE] 保守性偏差

Conservatism bias

来源 / Source: S1 PDF p.45 (章节页 / section p.5); S2 answer p.23

题意 投资者对新信息反应缓慢，继续维持原来的观点，这属于什么行为偏差？

With respect to behavioral biases, when investors tend to be slow to react to new information and continue to maintain their prior views, this is best described as:

A	保守性偏差	conservatism.
B	羊群行为	herding behavior.
C	代表性偏差	representativeness.

Q023 答案 / Answer: A

保守性偏差指收到新信息后，对原有信念或预测更新不足。羊群行为是跟随他人而忽视自己的信息；代表性偏差则根据与既有类别或熟悉情形的相似性判断概率。题目关键是“更新太慢”。

Conservatism is insufficient updating of prior beliefs after new information arrives. Herding means following others rather than relying on one’s own information. Representativeness involves judging probabilities through similarity to familiar categories or situations. The defining clue here is slow updating.

易错点：conservatism 不是投资风格保守，而是信息更新不足。

Trap: Conservatism bias means under-updating beliefs, not simply choosing low-risk investments.

Q045 风险厌恶与行为偏差

Risk aversion versus behavioral biases

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.45

题意 在以下项目中，哪项最不可能被视为解释价格异象的行为偏差？

With respect to behavioral finance, which of the following is least likely a behavioral bias used to explain pricing anomalies?

A	风险厌恶	Risk aversion
B	损失厌恶	Loss aversion
C	过度自信	Overconfidence

Q045 答案 / Answer: A

风险厌恶可以是理性投资者的正常偏好：承担更多风险需要更多预期回报。损失厌恶强调同额损失的痛苦大于收益的快乐；过度自信则高估自身判断与预测能力，二者属于常见行为偏差。

Risk aversion can be a normal preference in rational models: greater risk requires greater expected compensation. Loss aversion gives losses more psychological weight than equal gains, while overconfidence exaggerates the accuracy of one’s judgment. The latter two are standard behavioral biases.

易错点：risk aversion 不等于 loss aversion。

Trap: Risk aversion and loss aversion are different concepts.

Q111 行为金融

Behavioral finance

来源 / Source: S1 PDF p.60 (章节页 / section p.20); S2 answer p.111

题意 以下关于行为金融的说法，哪项正确？

Behavioral finance:

A	行为偏差只影响新手投资者	suggests that behavioral biases only affect novice investors.
B	行为金融可以为若干定价异象提供解释	provides a possible explanation for a number of pricing anomalies.
C	行为金融假设人们在决策中考虑所有可用信息	relies on the assumption that people consider all available information in decision-making.

Q111 答案 / Answer: B

行为金融研究认知与情绪偏差如何影响投资决策，这些偏差可能解释过度反应、反应不足等价格现象。新手和专业投资者都可能受影响；它并不要求人们始终完整处理全部信息。

Behavioral finance studies how cognitive and emotional biases influence investment decisions. Such biases may help explain pricing patterns such as overreaction or underreaction. They can affect experienced professionals as well as novices; people are not assumed to process all available information perfectly.

易错点：“只影响新手”过于绝对；行为解释也不代表每个异象都已被证明。

Trap: Biases are not restricted to novices, and a behavioral explanation is not proof of every anomaly.

第 4 章 股权证券与公司行动

Equity Securities and Corporate Actions

把股东权利、现金分配、股份数量和经济价值分开理解。

Separate shareholder rights, cash distributions, share counts and economic value.

本章原题 / Original questions: 25 | 单元 / Units: S1, S2, S3, S4

S1 普通股、优先股与投票

Common shares, preferred shares and voting

对应原题 / Questions: Q15, Q151, Q19, Q72, Q92, Q48, Q132, Q47

1. 普通股是剩余索取权，分红不是固定承诺。优先股通常享有固定或约定股息，并在清算分配中优先于普通股，但排在债权人之后；优先不等于保证拿回本金。

Common shares are residual claims and do not promise fixed dividends. Preferred shares typically have fixed or specified dividends and priority over common equity on liquidation, but rank behind creditors. Priority is not a guarantee of repayment.

2. Cumulative 累积优先股的未付股息会累积；non-cumulative 不累积。Participating 参与优先股可能获额外利润分配或清算资产分配，不是单纯补发以前欠付股息。

Cumulative preferred shares accumulate unpaid dividends; non-cumulative shares do not. Participating shares may receive additional profit or liquidation distributions, which differs from recovering dividend arrears.

3. Callable 让发行人选择赎回，对投资者不利，可能增加再投资风险；putable 让投资者选择卖回，对投资者有利，因此其他条件相同可接受较低股息。可转优先股通过转股权分享普通股上涨潜力。

Callability benefits the issuer and can expose the investor to reinvestment risk. A put right benefits the investor, allowing a lower dividend all else equal. Convertible preferred shares can participate in common-share upside through conversion.

4. 累积投票 cumulative voting 可把多席位选举的票集中给一名候选人，有利少数股东；statutory voting 按每个席位分别投票；proxy voting 是委托别人代投。

Cumulative voting allows votes across multiple board seats to be concentrated on one candidate, helping minority shareholders. Statutory voting votes separately for each seat. Proxy voting delegates voting to someone else.

速记：Callable 权利给公司；putable 权利给投资者；cumulative 补旧欠，participating 分额外。

Memory cue: Call: issuer’s option. Put: investor’s option. Cumulative: arrears. Participating: additional distributions.

Q015 优先股的优先顺位

Preference-share priority

来源 / Source: S1 PDF p.43 (章节页 / section p.3); S2 answer p.15

题意 优先股相对于普通股，在哪方面通常具有更高优先顺位？

Preference shares most likely rank above common shares with respect to:

A	投票权	voting rights
B	分享公司经营表现	sharing in the operating performance of the company.
C	清算时公司净资产的分配	the distribution of the company's net assets upon liquidation.

Q015 答案 / Answer: C

优先股通常在股息支付和清算剩余资产分配方面排在普通股之前，但仍排在债权人之后。它通常没有普通股那样的投票权，也不会自动等比例分享所有经营上行收益，具体仍取决于合约条款。

Preference shares generally rank ahead of common shares for dividends and liquidation distributions, while remaining junior to creditors. They typically have limited voting rights and more constrained participation in operating upside, subject to their contractual features.

易错点：优先于普通股不代表优先于债务，也不代表清算回报有保证。

Trap: Priority over common equity is neither priority over debt nor a guaranteed liquidation recovery.

Q151 优先股与普通股风险

Preferred versus common-share risk

来源 / Source: S1 PDF p.68 (章节页 / section p.28); S2 answer p.151

题意 按典型优先股特征，优先股比普通股风险较低的原因是优先股具有哪项特点？

Preference shares are less risky than common shares because preference shares have:

A	固定股息	fixed dividends.
B	公司清算时保证获得回报	a guaranteed return if a company is liquidated.
C	总收益中未来价格回报占比更大	a larger portion of total return based on future price return.

Q151 答案 / Answer: A

典型固定股息优先股的股息较可预测，且股息在总回报中占较大部分，因此现金流不确定性通常低于普通股。清算顺位优先不等于保证收回本金；资产不足时，优先股持有人仍可能损失。

For a conventional fixed-dividend preferred share, more of total return comes from relatively predictable dividends, reducing cash-flow uncertainty compared with common equity. Priority in liquidation is not a guarantee: holders can still lose money when available assets are insufficient.

易错点：题目比较典型固定股息优先股；优先不代表保本或无信用风险。

Trap: The question uses conventional fixed-dividend preferred shares. Priority does not guarantee principal or remove credit risk.

Q019 [优先练习 CORE] 优先股条款与风险

Preference-share features and risk

来源 / Source: S1 PDF p.44 (章节页 / section p.4); S2 answer p.19

题意 其他条件相同，哪种优先股的未来现金流最不确定、投资者潜在风险最大？

All else being equal, the preference share with the lowest certainty of future cash flows and the greatest potential risk for investors is most likely.

A	可回售、非累积股息	putable with non-cumulative dividends.
B	不可赎回、累积股息	non-callable with cumulative dividends.
C	可赎回、非累积股息	callable with non-cumulative dividends.

Q019 答案 / Answer: C

Callable 赋予发行人赎回权，可能在对发行人有利时终止投资者的现金流；non-cumulative 表示漏付股息不会累积补发。两者叠加降低现金流确定性。Putable 由投资者决定回售，通常保护投资者；cumulative 则保留欠付股息索偿。

A callable feature lets the issuer redeem the shares, potentially cutting off an attractive income stream. Non-cumulative dividends do not accumulate when omitted. Combining these features creates the greatest uncertainty among the choices. Investor put rights and cumulative dividends offer more protection.

易错点：Callable 是发行人的选择权；putable 是投资者的选择权。

Trap: A call belongs to the issuer; a put belongs to the investor.

Q072 优先股的嵌入期权

Embedded options in preference shares

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.72

题意 其他条件不变，下列哪一种优先股支付的股利最少？

All else being equal, which of the following preference shares pays the lowest dividend?

A	可回售优先股	Putable
B	可赎回优先股	Callable
C	不可赎回优先股	Non-callable

Q072 答案 / Answer: A

可回售条款给予投资者按约定价格卖回发行人的权利，为投资者提供额外保护，因此投资者可接受较低股利。可赎回条款由发行人掌握，给投资者带来被提前赎回的风险，通常需要较高股利补偿。

A put option benefits the investor by allowing sale back to the issuer at a specified price. Investors can accept a lower dividend for that protection. A call option benefits the issuer and exposes investors to redemption risk, generally requiring a higher dividend, all other terms equal.

易错点：Putable 的权利在投资者，callable 的权利在发行人。

Trap: The investor controls the put; the issuer controls the call.

Q092 参与分配优先股

Participating preference shares

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.92

题意 其他条件不变，哪一种优先股特征可能使持有人在公司清算时，获得超过面值的额外资产分配？

All else being equal, which of the following preference share characteristics may contain provisions that entitle shareholders to an additional distribution of the company's assets upon liquidation, above the par value?

A	可赎回	Callable
B	累积	Cumulative
C	参与分配	Participating

Q092 答案 / Answer: C

参与分配优先股可以约定：除固定股利或优先返还面值外，还参与额外利润或清算剩余资产分配。可赎回规定发行人的回购权；累积主要处理未支付股利的累积权利，因此与题目“超面值额外分配”最直接相关的是参与条款。

Participating preference shares may provide a right to additional profits or remaining liquidation assets beyond their stated preference or par value. Callable describes the issuer’s redemption right. Cumulative primarily concerns unpaid dividend entitlements. Participation is therefore the feature directly matching additional liquidation distributions.

易错点：Cumulative 是股利累积；participating 是额外分配权。具体范围仍看条款。

Trap: Cumulative concerns dividend arrears; participating concerns additional distributions, subject to the security’s terms.

Q048 可转换优先股

Convertible preference shares

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.48

题意 以下关于可转换优先股的说法，哪项最可能正确？

Convertible preference shares most likely.

A	对投资者而言，比对应普通股风险更高	are riskier than the underlying common shares for investors.
B	让投资者受益于普通股股价上涨	allow investors to benefit from a rise in the price of the common shares.
C	主要由低风险公司发行作为融资方式	are issued primarily by companies of lower risk and used as a financing option.

Q048 答案 / Answer: B

转换权使持有人在普通股价格上升时，有机会把优先股转换为普通股并参与上行收益。同时，转换前通常仍保留优先股的股息及清算顺位特征。此工具也常用于风险较高的创投与私募融资。

The conversion option allows holders to participate in increases in the common share price. Before conversion, they generally retain preferred dividend and liquidation features. Convertible preference shares are also used in venture capital and private equity financing, where issuers may be relatively risky.

易错点：可转换的价值在于上行参与权，不是保证未来回报。

Trap: Conversion provides upside participation, not a guaranteed return.

Q132 可转换优先股

Convertible preference shares

来源 / Source: S1 PDF p.64 (章节页 / section p.24); S2 answer p.132

题意 以下哪项关于可转换优先股的说法正确？

Convertible preference shares:

A	常用于风险投资和私募股权融资	are popular in financing venture capital and private equity transactions.
B	价格波动性高于对应普通股	are subject to more price volatility than the underlying common shares.
C	对应普通股上涨时，可转换优先股不会增值	do not increase in value due to an increase in price of the underlying common shares.

Q132 答案 / Answer: A

可转换优先股结合优先股权利与转为普通股的选择权，既可提供一定优先保护，也让投资者分享普通股上涨，因此常用于风险投资和私募股权融资。实际风险取决于条款，不能忽略转换权的价值。

Convertible preference shares combine preferred claims with an option to convert into common equity. This structure can provide downside preference while preserving participation in common-share upside, making it useful in venture-capital and private-equity financing. The conversion option can become more valuable as common shares rise.

易错点：C 忽略转换期权；本题也不能把可转优先股一般化为比普通股波动更大。

Trap: C ignores the conversion option. Greater volatility than the underlying common shares is not the defining feature.

Q047 [优先练习 CORE] 累积投票

Cumulative voting

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.47

题意 允许股东把所有票数集中投给一个候选人的投票方法叫什么？

The voting method that allows shareholders to cast all their votes for a single candidate is best described as:

A	委托投票	proxy voting.
B	法定 / 逐席投票	statutory voting.
C	累积投票	cumulative voting.

Q047 答案 / Answer: C

累积投票把可投票数汇总，股东可把票数集中于某一候选人，因而有利于少数股东争取董事席位。逐席投票不能把不同席位的票集中到一个人；委托投票则只是让代理人代为投票。

Cumulative voting pools votes so a shareholder may concentrate them on one candidate, helping minority shareholders obtain board representation. Statutory voting does not allow pooling across seats. Proxy voting concerns who casts the votes, not how votes can be concentrated.

易错点：proxy 是“由谁投”；cumulative 是“票怎样分配”。

Trap: Proxy voting concerns the voter’s representative; cumulative voting concerns vote allocation.

S2 融资、股息、回购与拆并股

Financing, dividends, repurchases and splits

对应原题 / Questions: Q46, Q56, Q27, Q33, Q30, Q31

1. 增发股份带来新资金，可用于项目、收购或改善财务结构。股票股利只是把更多股份按比例分给现有股东，并不带来新现金，也不改变每名股东的持股比例。

Issuing new equity raises cash for projects, acquisitions or capital-structure needs. A stock dividend distributes additional shares proportionately to existing holders; it raises no new cash and does not change proportional ownership.

2. 拆股与股票股利增加股数并相应降低每股价格；并股 reverse split
减少股数并相应提高每股价格。忽略信号、交易成本与税等因素，股东总财富不因股份单位改变而改变。

Splits and stock dividends increase share count and proportionally reduce the per-share price. A reverse split reduces share count and raises the per-share price. Ignoring signals, taxes and transaction effects, changing share units does not change total shareholder wealth.

3. 现金股利和按公允价值进行的回购都把现金从公司返还股东。在忽略税、信息效应和交易成本等条件下，二者具有可比的股东财富效果；股价或 EPS 变化本身不等于创造财富。

Cash dividends and repurchases at fair value both return corporate cash to shareholders. Their shareholder-wealth effects can be equivalent when taxes, information effects and transaction costs are ignored. A price or EPS change alone is not proof of value creation.

速记：公司收到钱才叫融资；股数变多不等于财富变多。

Memory cue: Financing brings new money to the issuer; more share units do not create more wealth.

Q046 发行权益的用途

Why companies issue equity

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.46

题意 公司发行权益证券可以出于以下哪些目的？

Companies issue equity securities for which of the following purpose(s)?

A	仅用于收购	Making acquisitions only
B	仅用于满足债务契约	Ensuring that debt covenants are met only
C	既用于收购，也用于满足债务契约	Both making acquisitions and ensuring that debt covenants are met

Q046 答案 / Answer: C

发行股票可以筹集收购所需现金，也可以直接以股份支付收购对价。增加权益资金还能降低杠杆或改善资本结构，帮助满足债务契约要求。因此两项目的都可能成立，不能把发行股本只理解为日常经营融资。

Equity issuance can fund acquisitions or provide shares as acquisition consideration. Increasing equity capital can also improve leverage measures and help meet debt covenants. Both purposes are valid uses of equity financing.

易错点：公司可为了扩张融资，也可为了修复资本结构融资。

Trap: Equity may finance expansion or strengthen the capital structure.

Q056 发行股票与股票股利

Equity issuance versus stock dividends

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.56

题意 下列哪一种方式最可能用于为资本项目筹集资金？

Which of the following is most likely used to raise funds for a capital project?

A	仅发行股权	Equity issuance only
B	仅发放股票股利	A stock dividend only
C	发行股权和股票股利都可以	Both equity issuance and a stock dividend

Q056 答案 / Answer: A

公司发行新股并向投资者收取认购款，可以获得项目所需现金。股票股利只是向原股东按持股比例发放额外股票，没有外部现金流入；股份数增加不等于公司筹得新资金。

A cash equity issuance brings new funds into the company when investors pay for the newly issued ownership interests. A stock dividend distributes additional shares to existing shareholders without receiving new cash. More shares outstanding therefore do not, by themselves, mean that a capital project has been funded.

易错点：判断融资看“现金是否流入公司”，不能只看股数增加。

Trap: Identify financing by cash entering the company, not merely by an increase in share count.

Q027 [优先练习 CORE] 股票股利的经济效果

Economic effect of a stock dividend

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.27

题意 以下关于股票股利的说法，哪项正确？

A stock dividend:

A	它直接影响公司的估值	is relevant for valuation of a company.
B	它减少流通在外股数	involves a reduction in the number of shares outstanding.
C	它不改变股东在公司的持股比例	does not affect the shareholders' proportional ownership in the company.

Q027 答案 / Answer: C

股票股利按持股比例分发额外股份，总股数增加，每股所代表的权益相应减少。若其他条件不变，公司的总价值和每位股东的持股比例均不变，也没有现金从公司流向股东。

A pro rata stock dividend distributes additional shares to existing holders. Shares outstanding increase while value per share adjusts, leaving total company value and proportional ownership unchanged, all else equal. No cash is transferred from the company to shareholders.

易错点：股数增加不等于财富增加；要同时看每股价值。

Trap: More shares do not by themselves mean more wealth; value per share adjusts.

Q033 股票股利与拆股

Stock dividends and stock splits

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.33

题意 其他条件相同，哪项与股票股利对公司和股东产生相同的经济效果？

All else being equal, which of the following are equivalent to stock dividends in terms of the economic effect on the company and shareholders?

A	拆股	Stock splits
B	现金股利	Cash dividends
C	股份回购	Share repurchases

Q033 答案 / Answer: A

股票股利和拆股都把既有公司权益划分为更多股份，不新增公司的经济价值，也不改变股东比例。现金股利和回购则会把现金从公司分配出去，减少公司现金，属于不同性质的资本分配行为。

Stock dividends and stock splits divide the existing equity value into more shares without changing total economic value or proportional ownership, all else equal. Cash dividends and repurchases distribute corporate cash and are different forms of capital distribution.

易错点：股票股利发“股份”；现金股利和回购发“现金”。

Trap: Stock dividends issue shares; cash dividends and repurchases distribute cash.

Q030 并股

Reverse stock splits

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.30

题意 其他条件相同，并股（reverse stock split）会造成什么变化？

All else being equal, a reverse stock split results in:

A	股数减少、每股价格上升	a decrease in the number of shares and an increase in the share price.
B	股数增加、每股价格下降	an increase in the number of shares and a decrease in the share price.
C	股数增加、每股价格上升	an increase in the number of shares and an increase in the share price.

Q030 答案 / Answer: A

并股把多股合成较少股数，例如若干旧股换成一股新股。在公司总价值不变的假设下，股数减少，每股价格按比例提高；股东的持股比例和总持仓价值不因这一机械调整而改变。

A reverse split consolidates existing shares into fewer shares. With total equity value unchanged, the share count falls and the price per share rises proportionally. Proportional ownership and aggregate holding value are unchanged by this mechanical adjustment alone.

易错点：split 增加股数；reverse split 减少股数。

Trap: A split increases share count; a reverse split reduces it.

Q031 现金股利与股份回购

Cash dividends and share repurchases

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.31

题意 其他条件相同，哪项对股东财富的效果与现金股利相同？

All else being equal, which of the following has the same effect on shareholders' wealth as a cash dividend?

A	拆股	A stock split
B	股票股利	A stock dividend
C	股份回购	A share repurchase

Q031 答案 / **Answer: C**

以公平价格执行的股份回购与等额现金股利，都是把公司的现金分配给股东。在忽略税收、交易成本与信号等差异时，股东总体财富效果等价。拆股及股票股利只改变股份单位，并未把现金派出。

A fair-value share repurchase and an equal-value cash dividend are alternative ways to distribute corporate cash. Their aggregate wealth effects are equivalent when taxes, transaction costs, signaling, and other differences are held constant. Splits and stock dividends distribute no cash.

易错点：财富等价是其他条件不变的理论比较，并非每个现实回购都创造同样价值。

Trap: The equivalence relies on the all-else-equal assumptions; real repurchases can differ.

S3 股息日期与除息价格

Dividend dates and ex-dividend pricing

对应原题 / Questions: Q57, Q113, Q108, Q107, Q2

1. Declaration date 是宣布股息；ex-dividend date 是开始不附带本次股息权利的交易日；record date 是公司认定登记股东的日期；payment date 是支付日。普通题目中，能否拿股息直接看是否在除息日前买入。

The declaration date announces the dividend. The ex-dividend date is the first date trading without entitlement to that dividend. The record date determines registered holders, and the payment date pays the dividend. In ordinary questions, entitlement depends on buying before the ex-date.

2. 题干已给除息日时，不必反推结算周期。第 108 题给 8 月 2 日除息，按题目工作日假设，最后含息购买日是 8 月 1 日。除息日当天买入已不享有该次股息。

When the ex-date is supplied, do not reverse-engineer the settlement cycle. Q108 gives 2 August; under its business-day assumption, the last cum-dividend purchase date is 1 August. Buying on the ex-date is too late for that dividend.

3. 其他条件不变，理论除息价约为前日含息价格减每股股息。现实价格还受新闻、市场波动和税等因素影响，不保证精确跌同样金额。

All else equal, the theoretical ex-dividend price is approximately the prior cum-dividend price less the dividend per share. Actual prices also respond to news, market moves and taxes, so the observed drop need not equal the dividend exactly.

4. 不要背“登记日必定工作日”或“除息日永远比登记日早固定几天”。规则依市场和结算制度而定；SEC 当前说明明确给出登记日为周日的例子，因此第 2 题原答案 A 不是普遍唯一结论。见来源 W3。

Do not memorize that record dates must be business days or that the ex-date is always a fixed number of days earlier. Rules depend on the market and settlement regime. Current SEC guidance explicitly illustrates a Sunday record date, so Q2’s source answer A is not universally unique. See W3.

Theoretical ex-dividend price = cum-dividend price - dividend per share

速记：Ex = 不附股息；看题给除息日，不死记登记日间隔。

Memory cue: Ex means without the dividend; use the supplied ex-date rather than memorizing a settlement gap.

Q057 股利日期

Dividend chronology

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.57

题意 在股利支付时间顺序中，除息日最可能位于下列哪一个日期之后？

In dividend payment chronology, the ex-dividend date most likely comes after the:

A	股权登记日	record date.
B	股利支付日	payment date.
C	股利宣告日	declaration date.

Q057 答案 / Answer: C

宣告日是公司宣布股利的日期；除息日是股票开始不附带本次股利权利交易的日期；登记日用来确定登记股东；支付日实际发放股利。按题库的通常顺序，宣告在先，除息随后，因此选 C。

The declaration date announces the dividend. The ex-dividend date is when trading starts without entitlement to that dividend; the record date identifies registered holders; the payment date distributes the cash. Under the chronology assumed in the question, declaration precedes the ex-dividend date, so C is correct.

易错点：先理解各日期功能；具体除息与登记日间隔依市场及结算规则而定。

Trap: Learn each date’s role; the ex-date/record-date gap depends on market and settlement rules.

原稿核验：原答案提到除息日比登记日早一至两个工作日；这不是可跨市场、跨时期照搬的固定规则。本题答案 C 不受该细节影响。

Source check: The source describes a one- or two-business-day gap before the record date. That is not a universal rule across markets and settlement regimes; the answer C does not depend on that detail.

外部核验 / External check: W3，见文末来源 / see Sources.

Q113 股息时间线

Dividend chronology

来源 / Source: S1 PDF p.60 (章节页 / section p.20); S2 answer p.113

题意 股票首次不附带已宣派股息进行交易的日期叫什么？

The first date that a share trades without the declared dividend is the:

A	除息日	ex-date.
B	派息日	payable date.
C	宣派日	declaration date.

Q113 答案 / Answer: A

除息日决定交易是否附带本次股息权利；宣派日是董事会宣布股息的日期；派息日是实际支付现金的日期。把权利切换与现金到账分开，就不会混淆这些术语。

The ex-date marks the first trade without the declared dividend entitlement. The declaration date is when the dividend is announced, while the payable date is when cash is actually distributed. Distinguish the entitlement cutoff from the cash payment.

易错点：Ex = without。宣派、除息、登记和付款是不同事件。

Trap: Ex means without. Declaration, ex-date, record date, and payment date are distinct events.

Q108 [优先练习 CORE] 股息时间线

Dividend chronology

来源 / Source: S1 PDF p.59 (章节页 / section p.19); S2 answer p.108

题意 除息日为 8 月 2 日，股权登记日为 8 月 5 日。最迟在哪一天买入股票，才有权获得本次股息？

An analyst gathers the following information about a company's dividend payment chronology.

Ex-dividend date	2 August
Holder-of-record date 5 August	5 August

The last date an investor can purchase the company's stock and be entitled to receive the dividend is most likely:

A	8 月 1 日	1 August.
B	8 月 2 日	2 August
C	8 月 4 日	4 August.

Q108 答案 / Answer: A

除息日是开始不附带本次股息权利的日期，因此必须在除息日之前买入。按本题给定日期，最后含息交易日是 8 月 1 日。题目已给出除息日，不需要再用登记日推算结算制度。

The ex-date is the first trading date without entitlement to the declared dividend. Purchase before that date; under the stated calendar, the last eligible purchase date is 1 August. Because the ex-date is supplied, no settlement-cycle assumption is needed.

易错点：登记日前买入不一定来得及；本题直接以除息日判断。

Trap: Buying before the record date is not sufficient by itself; use the supplied ex-date.

Q107 [优先练习 CORE] 除息日与股价

Ex-dividend date and price

来源 / Source: S1 PDF p.59 (章节页 / section p.19); S2 answer p.107

题意 每股应付股息 $0.50，除息日为 8 月 20 日，8 月 19 日收盘价为 $29.00。其他条件不变，8 月 20 日开盘时理论股价最可能是多少？

An analyst gathers the following information about a company's shares:

Dividend payable per share	$0.50
Ex-date	20 August
Closing share price on 19 August	$29.00

All else being equal, at the beginning of trading on 20 August, the company's shares will most likely trade at

A	$28.50	$28.50
B	$29.00	$29.00.
C	$29.50	$29.50.

Q107 答案 / Answer: A

除息日起买入股票不再获得这次已宣派股息，所以理论股价应扣除股息：29.00 - 0.50 = $28.50。原股东持有的经济价值在理想条件下由“股票”转成“股票加应收股息”，不会凭空增加。

On the ex-dividend date, new buyers no longer receive the declared dividend. Holding everything else constant, the theoretical price falls by $0.50: $29.00 - $0.50 = $28.50. The original shareholder's value is split between the stock and the dividend entitlement.

易错点：这是其他条件不变的理论调整；实际市场开盘还受新信息影响。

Trap: This is a theoretical all-else-equal adjustment; actual opening prices also reflect new information.

Q002 [原稿问题 SOURCE ISSUE] 股息时间线

Dividend chronology

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.2

题意 在股息支付时间线中，以下哪个日期可以落在周末？

Which of the following dates in the dividend chronology can fall on a weekend?

A	支付日 (payment date)	The payment date.
B	登记日 (record date)	The record date.
C	除息日 (ex-date)	The ex-date.

Q002 原答案 **A** | 核验：并非普遍唯一答案 / **Source A; context-dependent**

原答案指定 A 支付日；但不能据此断言登记日只能是工作日。美国 SEC 的 Investor.gov 现行说明明确允许登记日落在非工作日，并举出 2026 年 3 月 15 日星期日作为例子。因此本题缺少市场及规则背景，A 不是可普遍适用的唯一答案。复习重点应放在宣布、除息、登记、支付各日期的功能。

The supplied answer selects A, payment date. However, a record date can also fall on a non-business day: SEC Investor.gov explicitly illustrates Sunday, 15 March 2026. Without a specified market and rule set, A is not a universally unique answer. Learn the functions of declaration, ex-dividend, record, and payment dates.

易错点：不要死记“登记日一定是工作日”；除息与登记安排须按市场规则判断。

Trap: Do not memorize that record dates must always be business days; use the applicable market rules.

原稿核验：原答案的“登记日只能是工作日”表述与 SEC Investor.gov 现行说明不符；本题应标记为规则背景不足，避免纳入无争议正确率统计。

Source check: The source statement that record dates occur only on business days conflicts with SEC Investor.gov guidance. Flag the item as context-dependent and exclude it from unambiguous scoring.

外部核验 / External check: W3，见文末来源 / see Sources.

S4 跨境证券与公募、私募

Cross-border securities and public/private equity

对应原题 / Questions: Q28, Q32, Q74, Q150, Q143, Q153

1. 全球注册股份 global registered shares 是同一普通股可在不同市场、以不同货币交易。存托凭证 depositary receipts 则是对存托机构所持基础股份的凭证；sponsored 计划有发行人参与，股东投票权安排通常更完整。

Global registered shares are common shares traded across exchanges and currencies. Depositary receipts represent underlying shares held through a depositary arrangement. Sponsored programs involve the issuer and typically provide more developed voting-rights arrangements.

2. 用本币买入存托凭证并不自动消除汇率风险，因为底层股票与现金流仍可能受外币影响。是否上市、股东权利和货币风险应分别判断。

Buying a receipt in the investor’s home currency does not automatically eliminate currency risk. Underlying shares and cash flows may still be exposed to foreign currency. Listing status, shareholder rights and FX exposure are separate questions.

3. 公开发行扩大融资渠道，也伴随公开披露、监管及短期业绩关注。私募股权通常没有活跃二级市场，流动性较差，公开资料较少；私有化不等于业务风险自动降低。

Public issuance broadens financing access but brings disclosure, regulatory requirements and short-term performance attention. Private equity usually lacks an active secondary market, has lower liquidity and provides less public information. Going private does not automatically lower business risk.

速记：交易币种不等于经济风险币种；上市融资会伴随披露要求。

Memory cue: Trading currency is not the same as economic currency exposure; public financing brings disclosure obligations.

Q028 全球注册股份与存托凭证

Global registered shares and depositary receipts

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.28

题意 可在不同国家交易所、以不同货币交易的同一普通股份，最准确的名称是什么？

Common shares that are tradeable on different stock exchanges in different currencies are best described as:

A	全球注册股份（GRS）	global registered shares.
B	全球存托凭证（GDR）	global depository receipts.
C	上市存托凭证组合（BLDR）	a basket of listed depository receipts.

Q028 答案 / Answer: A

全球注册股份是可以在不同交易所、以不同货币交易的普通股本身。存托凭证则由存托机构发行，代表对外国公司股份的权益；BLDR 是持有一篮子存托凭证的工具。题目强调同一普通股份，因此选 GRS。

A global registered share is the ordinary share itself, tradable on different exchanges in different currencies. A depositary receipt represents an interest in underlying foreign shares through a depositary arrangement. A basket of listed depositary receipts holds multiple receipts.

易错点：GRS 是股份本身；DR 是代表股份权益的凭证。

Trap: A GRS is the share itself; a DR is a receipt representing an interest in shares.

Q032 保荐与非保荐存托凭证

Sponsored and unsponsored depositary receipts

来源 / Source: S1 PDF p.46 (章节页 / section p.6); S2 answer p.32

题意 保荐存托凭证与非保荐存托凭证，最可能在哪方面有所不同？

Sponsored depository receipts most likely differ from unsponsored ones in terms of whether

A	投资者是否具有投票权	investors have voting rights.
B	是否在交易所交易	they are traded on exchanges.
C	价格是否受汇率变化影响	their prices are affected by exchange rate movements.

Q032 答案 / Answer: A

按本题教材模型，保荐 DR 有外国发行公司参与，持有人通常享有包括投票安排在内的股东权利；非保荐 DR 由存托银行自行建立，投票权通常由银行保留。两种凭证都可能受到标的股价与汇率变化影响。

Under the textbook distinction, the issuer participates in a sponsored DR program and holders generally receive shareholder rights, including voting arrangements. In an unsponsored program, the depositary typically retains voting rights. Both forms remain exposed to underlying share prices and exchange rates.

易错点：用本地货币交易的外国股票凭证，并不会自动消除汇率风险。

Trap: Trading a foreign-share receipt in local currency does not eliminate currency exposure.

Q074 上市与管理层时间视角

Public listing and managerial time horizon

来源 / Source: S1 PDF p.53 (章节页 / section p.13); S2 answer p.74

题意 公司通过哪一种方式筹集股权资本后，管理层更可能关注短期业绩而非长期盈利增长？

Management is more likely to focus on short-term results instead of long-term earnings growth if a company raises equity through:

A	风险投资	venture capital.
B	杠杆收购	a leveraged buyout.
C	首次公开募股	an initial public offering.

Q074 答案 / Answer: C

IPO 后公司成为公众公司，面对市场价格、分析师盈利预测和定期业绩报告压力，管理层较可能重视短期目标。风险投资与杠杆收购属于私募股权安排，其投资者通常能给予不同的治理和较长期经营调整空间。

After an IPO, a public company faces market scrutiny, analyst forecasts and recurring earnings-report expectations, which may encourage short-term targets. Venture capital and leveraged buyouts are private-equity structures that can allow a different governance framework and longer operational planning horizon. This is a tendency rather than a certainty.

易错点：题目说 more likely，不能理解为所有上市管理层都只顾短期。

Trap: The question states a tendency, not a universal rule for public-company managers.

Q150 金融体系中的股权融资

Equity financing in the financial system

来源 / Source: S1 PDF p.68 (章节页 / section p.28); S2 answer p.150

题意 公司在公开市场筹集普通股资本时，最可能出现哪项情况？

When a company raises common equity capital in the public market, the company most likely.

A	把资金从现在移到未来	moves money from the present to the future.
B	承诺未来按固定时间分配资金	agrees to make scheduled distributions in the future.
C	需要满足监管报告要求	is required to meet regulatory reporting requirements.

Q150 答案 / Answer: C

公开发行普通股通常伴随财务披露与报告义务。公司获得现在的资金，交换投资者对未来剩余收益的权利；普通股分配并不像借款还本付息那样有固定偿付时间表。

Public common-equity financing normally entails regulatory reporting and disclosure obligations. The company receives money now in exchange for investors' claims on future residual distributions. Common equity does not create the scheduled repayment obligation associated with a loan.

易错点：从筹资公司角度，是把未来收益所支持的资金提前到现在；普通股股息不等于债务利息。

Trap: For the issuer, financing brings funds into the present. Equity distributions are not scheduled debt-service payments.

Q143 公开股权与私募股权

Public versus private equity

来源 / Source: S1 PDF p.66 (章节页 / section p.26); S2 answer p.143

题意 与上市公司相比，完成私有化的公司最可能具有哪项特征？

In contrast to a public company, a company that has gone private most likely.

A	承担更高监管成本	faces greater regulatory costs.
B	更关注短期业绩	focuses more on short-term results.
C	股权缺乏活跃的二级市场	lacks an active secondary market for its equity.

Q143 答案 / Answer: C

私有化后，股票通常不再在公开交易所持续交易，转让往往要协商，流动性较低。公开上市相关合规成本一般减少，管理层也可能有更大的空间处理长期经营问题，但不是自动保证经营改善。

After going private, shares generally lack an active public secondary market and transfers require negotiation. Public-listing compliance costs often decline, and management may gain more flexibility to pursue long-term improvements. Neither liquidity nor improved operating outcomes is guaranteed.

易错点：Private 的核心考点是交易与披露较少，不是监管成本更高。

Trap: The key distinction is reduced public trading and disclosure, not higher listing-related costs.

Q153 公开股权与私募股权

Public versus private equity

来源 / Source: S1 PDF p.68 (章节页 / section p.28); S2 answer p.153

题意 私募股权证券最可能具有哪项特征？

Private equity securities most likely.

A	在公开交易所上市	are listed on public exchanges.
B	流动性差且难以交易	are illiquid and difficult to trade.
C	财务信息容易取得	have easily available financial information.

Q153 答案 / Answer: B

私募股权通常没有活跃的公开报价和交易市场，买卖需要协商并可能受到转让限制，因此流动性低。非上市公司的公开财务资料也可能较少，估值和尽职调查更依赖投资者取得的信息。

Private equity generally lacks active public quotations and exchange trading. Transfers require negotiation and may face restrictions, making these securities illiquid. Publicly available financial information can also be limited, so valuation depends heavily on information obtained through due diligence.

易错点：Private equity 并不等同于上市股票中的小公司；关键是非公开股权及其交易特征。

Trap: Private equity is not simply small-cap listed equity; the public-trading and disclosure differences matter.

第 5 章 公司分析与财务预测

Company Analysis and Forecasting

把账面数、市场判断和未来经营驱动连接起来。

Connect accounting measures, market expectations and operating drivers.

本章原题 / Original questions: 11 | 单元 / Units: C1, C2

C1 账面价值、ROE 与管理层影响

Book equity, ROE and management influence

对应原题 / Questions: Q103, Q22, Q94, Q90, Q104

1. 账面权益 = 账面资产 - 账面负债；股票市值 = 股价×股数；内在价值是未来经济利益的估计现值。这三者可能不同。投资者对未来现金流的看法可立刻改变市价，但不直接改写公司账面权益。

Book equity equals book assets minus book liabilities. Equity market value equals share price times shares outstanding. Intrinsic value estimates the present value of future benefits. Investor expectations can change the market price without directly changing reported book equity.

2. 净利润通过留存收益影响账面权益；回购减少公司现金和账面权益。管理层通过经营、融资和会计相关决策较直接影响账面值，而市场价值由市场交易形成。

Net income affects book equity through retained earnings; repurchases reduce cash and book equity. Management affects book value more directly through operating, financing and accounting decisions, while market value is formed in trading.

3. ROE 把一段期间的收益与产生该收益的平均权益对应。普通股 ROE
应使用普通股股东可得净利润与平均普通股账面权益；若权益增长快于净利润，其他条件相同时 ROE 下降。

ROE relates a period’s earnings to the average equity supporting those earnings. Common-share ROE uses income available to common shareholders and average common book equity. When equity grows faster than income, ROE falls, all else equal.

Book equity = book assets - book liabilities

ROE = net income available to common shareholders / average common equity

速记：账面值看报表，市值看市场，内在值看估计；ROE 分母优先用平均权益。

Memory cue: Book value: statements. Market value: trading. Intrinsic value: estimates. ROE normally uses average equity.

Q103 权益账面价值

Book value of equity

来源 / Source: S1 PDF p.58 (章节页 / section p.18); S2 answer p.103

题意 公司的权益账面价值等于什么？

The book value of a company's equity is:

A	未来现金流的现值	the present value of its future cash flows.
B	总资产与总负债之差	the difference between its total assets and total liabilities.
C	股价乘以已发行在外股数	its share price multiplied by the number of outstanding shares.

Q103 答案 / Answer: B

根据会计恒等式，资产 = 负债 + 权益，所以权益账面价值 = 账面总资产 - 账面总负债。股价×股数得到市场资本化价值；折现未来现金流得到一种内在价值估计。三者回答的是不同的价值口径。

The accounting identity gives assets = liabilities + equity, so book equity equals recorded total assets minus total liabilities. Share price multiplied by shares outstanding is market capitalization. Discounted future cash flows produce an intrinsic-value estimate. These are distinct measures and need not be equal.

易错点：账面、市场、内在价值三个口径必须分清。

Trap: Keep book value, market value and intrinsic value separate.

Q022 账面价值与市场价值

Book value versus market value

来源 / Source: S1 PDF p.45 (章节页 / section p.5); S2 answer p.22

题意 以下哪项最不可能直接改变公司的账面价值？

Which of the following is least likely to directly affect a company's book value?

A	公司净利润变化	Changes in the company's net income
B	公司回购自身股份	Purchases by the company of its own shares
C	投资者对公司未来现金流的估计	Investor estimates of the company's future cash flows

Q022 答案 / Answer: C

账面权益来自资产负债表：利润留存会增加权益，回购股份通常减少现金和账面权益。投资者对未来现金流的判断会改变市场愿意支付的价格，却不会仅因该判断而直接改写公司的会计账面金额。

Book equity is an accounting balance. Retained profits increase it, while share repurchases generally reduce cash and book equity. Investors' estimates of future cash flows can change market value without directly changing the amounts recorded in the company's balance sheet.

易错点：市场预期改变价格，不会自动改变账面权益。

Trap: A change in market expectations does not automatically change book equity.

Q094 账面价值与管理决策

Book value and management decisions

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.94

题意 公司管理层最可能直接影响公司的哪一种价值？

A company's management is most likely able to directly influence the company's:

A	账面价值	book value.
B	市场价值	market value.
C	内在价值	intrinsic value.

Q094 答案 / Answer: A

管理层经营、投资和分配决策影响会计利润、留存收益和净资产，因此能较直接影响账面权益。市场价值由投资者交易及预期形成；内在价值依赖未来现金流和风险估计，管理层可以影响其驱动因素，但不能直接设定估值结论。

Management decisions affect accounting earnings, retained earnings and net assets, directly influencing book equity. Market value is formed by investors' trading and expectations. Management can influence the economic drivers of intrinsic value, but cannot directly set the valuation estimate or the market's assessment.

易错点："能影响价值驱动因素"与"直接决定价值"并不相同。

Trap: Influencing economic drivers is different from directly determining the valuation.

Q090 [优先练习 CORE] ROE 与必要回报率

ROE versus required return

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.90

题意 归属于普通股股东的净利润，除以平均权益账面价值，最准确描述哪一个指标？

A company's net income available to ordinary shareholders divided by the average total book value of equity is best described the:

A	公司内在价值	company's intrinsic value.
B	公司净资产收益率（ROE）	company's return on equity.
C	公司股权投资者最低必要回报率	minimum required rate of return of investors in the company's equity.

Q090 答案 / Answer: B

ROE 衡量账面股东资本产生会计利润的能力，通常用期间利润除以期初、期末权益的平均值。内在价值是估计的价值金额；必要回报率是投资者因承担风险所要求的报酬率，二者都不是题目给出的比率。

ROE measures accounting profit generated on shareholders' book capital, using period earnings over average equity. Intrinsic value is an estimated value, whereas required return is the compensation investors demand for risk. Neither is the accounting ratio described. Numerator and denominator should use consistent equity-holder definitions.

易错点：普通股 ROE 应匹配普通股权益；有优先股时须注意利润与权益口径一致。

Trap: For common-shareholder ROE, match common earnings with common equity when preferred equity exists.

Q104 ROE 的分子与分母

Drivers of ROE

来源 / Source: S1 PDF p.59 (章节页 / section p.19); S2 answer p.104

题意 若股东权益的增长率处于以下哪种情况，公司的 ROE 最可能下降？

A company's ROE most likely decreases if shareholders' equity increases at:

A	低于净利润增长率	a lower rate than net income.
B	等于净利润增长率	the same rate as net income.
C	高于净利润增长率	a higher rate than net income.

Q104 答案 / Answer: C

ROE = 净利润 /
股东权益。按题目口径，分母增长比净利润快，单位权益赚取的利润就下降。例如利润不变而投入权益增加，ROE 会被摊薄。实务分析通常使用平均普通股股东权益，前后口径应一致。

ROE is net income divided by equity. Under the question's convention, equity growing faster than income reduces earnings per unit of equity and lowers ROE. In financial analysis, average common shareholders' equity is commonly used; maintain a consistent denominator across periods.

易错点：A 使 ROE 上升；B 使 ROE 不变。不要只看到权益增加就断定 ROE 上升。

Trap: A raises ROE and B leaves it unchanged. More equity does not automatically mean a higher ROE.

C2 由经营驱动建立预测

Forecasting from operating drivers

对应原题 / Questions: Q7, Q9, Q6, Q14, Q8, Q10

1. 自上而下从市场或行业总量出发，再估计公司份额；自下而上从门店、分支机构、销量、单价等经营单位出发。银行市场份额增长属于自上而下；分行数量增长更接近自下而上。

Top-down forecasting begins with the economy or industry and estimates company share. Bottom-up forecasting builds from branches, stores, volumes or unit prices. Bank market-share growth is a top-down driver; branch growth is a bottom-up operating driver.

2. 周期性企业不能机械延长过去一年结果，分析师需判断周期所处阶段、正常利润和未来需求。管理层指引是输入，不是必须照抄的答案。

For cyclical firms, do not mechanically extrapolate the latest year. Assess the cycle, normalized profitability and future demand. Management guidance is an input, not a forecast that must be copied.

3. 折旧可作为维持性资本开支的粗略参考，但不代表增长性资本开支。SG&A 要拆固定与变动部分；销售配送费用可随收入变动，总部费用不一定与收入同比例变化。

Depreciation can proxy maintenance capital expenditure approximately, but does not determine growth capex. Split SG&A into fixed and variable components; selling and distribution costs may scale with sales, while corporate overhead may not.

4. 情景分析同时改变一组相互一致的假设，观察上行情景、基准和下行情景，并与当前股价隐含假设比较。初次研究和持续更新报告都应讨论上、下行风险。

Scenario analysis varies a coherent set of assumptions across upside, base and downside cases and compares them with expectations embedded in valuation. Both initial and follow-up research should discuss upside and downside risks.

速记：Top-down 看市场份额；bottom-up 看门店数量；maintenance capex 才用折旧近似。

Memory cue: Top-down: market share. Bottom-up: operating units. Depreciation approximates maintenance capex.

Q007 [优先练习 **CORE]** 自上而下收入预测

Top-down revenue forecasting

来源 / Source: S1 PDF p.42 (章节页 / section p.2); S2 answer p.7

题意 预测银行收入时，以下哪项最适合归类为自上而下的驱动因素？

Which of the following forecast objects for a bank's revenue is best classified as a top-down driver?

A	净利息收入	Net interest income
B	市场份额增长	Growth in market share
C	分行数量增长	Growth in the number of branches

Q007 答案 / **Answer: B**

自上而下先预测整体市场或行业规模，再用市场份额估计公司收入。自下而上则从经营单位、数量和单位收益出发，例如分行数量×每家收入，或贷款余额×贷款利率减去融资成本。

A top-down forecast starts with the market or industry size and applies an expected market share. Bottom-up forecasts start with operating units and yields, such as branches times revenue per branch, or loan balances times lending rates less funding costs.

易错点：市场规模×份额是 top-down；数量×单价 / 收益率是 bottom-up。

Trap: Market size times share is top-down; operating volume times price or yield is bottom-up.

Q009 周期性公司的预测方法

Forecasting cyclical companies

来源 / Source: S1 PDF p.42 (章节页 / section p.2); S2 answer p.9

题意 对于处于高度周期性行业的公司，哪种财务报表预测方法最适合？

Which financial statement forecasting approach is best suited for companies in highly cyclical industries?

A	沿用历史结果	Historical results
B	依赖管理层指引	Management guidance
C	分析师自主判断的预测	Analyst's discretionary forecasts

Q009 答案 / Answer: C

周期性公司的盈利会随经济和商品周期显著变化，简单外推历史数据可能把高点或低点当成常态。分析师应结合宏观情景、模型、行业供需与周期位置作独立预测；管理层也未必更擅长预测宏观变量。

Highly cyclical earnings depend strongly on economic conditions and commodity cycles. Analysts should use independent scenarios, models, industry conditions, and cycle positioning instead of mechanically extrapolating history. Management does not necessarily have an informational advantage in forecasting macroeconomic variables.

易错点：周期高点利润不等于正常利润；管理层指引不是宏观预测保证。

Trap: Peak-cycle profits are not normalized profits, and guidance does not guarantee macroeconomic accuracy.

Q006 维持性与增长性资本开支

Maintenance versus growth capital expenditure

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.6

题意 折旧费用最适合用于预测以下哪项？

Depreciation expense is best used in forecasting:

A	仅增长性资本开支	growth capital expenditure only.
B	仅维持性资本开支	maintenance capital expenditure only.
C	增长性与维持性资本开支两者	both growth capital expenditure and maintenance capital expenditure.

Q006 答案 / Answer: B

折旧反映现有固定资产随使用而被消耗的成本，可作为维持现有产能所需资本开支的起点。扩产、进入新市场等增长性资本开支，应依据产能扩张计划与收入增长预测。折旧与维持性资本开支不一定完全相等。

Depreciation approximates the consumption of existing productive assets and can be a starting point for maintenance capital expenditure. Growth capital expenditure instead depends on expansion plans and projected revenue growth. Depreciation is a forecasting proxy, not an exact equality.

易错点：maintenance 是维持产能；growth 是增加产能。

Trap: Maintenance preserves capacity; growth expands capacity.

Q014 销售及行政费用预测

Forecasting SG&A

来源 / Source: S1 PDF p.43 (章节页 / section p.3); S2 answer p.14

题意 以下有关销售、一般及行政费用（SG&A）预测的说法，哪项最准确？

Which of the following statements about forecasting selling, general and administrative (SG&A)expenses is most accurate?

A	一般公司费用大多为变动成本	General corporate costs are mostly variable costs
B	销售和分销费用可按销售额百分比建模	Selling and distribution expenses can be modeled as a percentage of sales
C	整体 SG&A 与收入的关系比销货成本更直接	Overall SG&A expenses have a more direct relationship with revenues than cost of goods sold

Q014 答案 / Answer: B

销售及分销费用通常包含较大的变动部分，适合按销售额的一定比例预测。总部与一般行政成本更多具有固定性，可参考工资通胀等因素。销货成本通常与销售更直接相关，整体 SG&A 不一定同步变化。

Selling and distribution costs often have a substantial variable component and may be modeled as a percentage of sales. General corporate costs are more fixed and can be forecast using factors such as wage inflation. COGS usually has a more direct link to revenue than overall SG&A.

易错点：不要把所有 SG&A 都当成变动成本。

Trap: Do not treat every SG&A expense as variable.

Q008 情景分析

Scenario analysis

来源 / Source: S1 PDF p.42 (章节页 / section p.2); S2 answer p.8

题意 以下关于情景分析的说法，哪一项最准确？

Which of the following statements about scenario analysis is most accurate?

A	情景分析提供单一点估计	Scenario analysis provides a point estimate forecast
B	可把预测情景与当前估值所隐含的预测比较	Forecast scenarios can be compared to forecasts implied by current valuations
C	一般风险因素对所有公司的影响均相同	Generic risk factors in scenario analysis are assumed to affect all companies in the same way

Q008 答案 / Answer: B

情景分析为关键风险因素设定不同路径，例如基准、乐观和悲观情景，观察收入、利润和估值如何变化。把这些情景与市场价格所隐含的增长或利润率比较，可判断当前价格已经计入了怎样的预期。

Scenario analysis varies key risk factors to produce several possible outcomes. Comparing these scenarios with growth or margins implied by current valuations helps reveal what expectations are already priced in. A common risk factor can affect companies to very different degrees.

易错点：多个情景不是一个点；同一宏观冲击对不同公司的影响也不同。

Trap: Scenarios are multiple outcomes, and a shared macro risk does not affect every firm equally.

Q010 研究报告的风险部分

Risks in company research reports

来源 / Source: S1 PDF p.42 (章节页 / section p.2); S2 answer p.10

题意 下行和上行风险因素最可能包含在哪类公司研究报告中？

Downside and upside risk factors are most likely included in:

A	仅首次研究报告	an initial company research report only.
B	仅后续更新报告	a subsequent company research report only.
C	首次与后续研究报告都包含	both initial and subsequent research reports.

Q010 答案 / Answer: C

投资观点需要说明什么情况会使实际结果偏离基准预测。首次报告应列出上行与下行风险；后续报告也要随新信息更新风险、估值和建议。风险部分并非首次建模后就可以省略。

A research recommendation should identify what could make outcomes differ from the base case. Both an initial report and subsequent updates should discuss upside and downside risks. New information may change risk assessments as well as valuation and the recommendation.

易错点：Risks 既包括坏于预期，也包括好于预期。

Trap: Risks include both worse-than-expected and better-than-expected outcomes.

第 6 章 行业与竞争分析

Industry and Competitive Analysis

先界定行业与周期，再分清外部环境和行业内部竞争力量。

Define the industry and cyclicality, then separate external trends from competitive forces.

本章原题 / Original questions: 13 | 单元 / Units: N1, N2

N1 行业分类、周期与外部影响

Classification, cyclicality and external influences

对应原题 / Questions: Q53, Q84, Q81, Q89, Q49, Q59, Q42, Q55, Q68

1. GICS 按企业提供的产品与服务等业务属性分类。由宽到窄是 sector、industry group、industry、sub-industry。政府和商业机构均可建立分类；商业分类通常为投资用途而更及时更新。本讲义不沿用原答案中的 2009 年分类数量。

GICS classifies firms by business activities such as products and services. The hierarchy is sector, industry group, industry and sub-industry. Governments and commercial organizations both create classifications; commercial systems are typically updated more frequently for investment use. Obsolete 2009 counts in the source are not repeated.

2. 周期性行业的收入利润随经济景气变动明显，例如工业、汽车；防御性行业对经济周期较不敏感，例如基础公用事业。成长性描述长期增长阶段，不能自动等同于防御性。

Cyclical industries, such as industrials and autos, are sensitive to economic activity. Defensive industries, such as basic utilities, are less sensitive. A growth classification describes long-run expansion and does not automatically imply defensiveness.

3. 人口年龄结构是 demographic；生活方式与消费偏好是 social；技术变革属于 technological。这些是外部影响。行业集中度、进入壁垒、规模经济和成本结构更偏行业内部结构。

Age distribution is demographic; lifestyles and spending preferences are social; innovation is technological. These are external influences. Concentration, barriers to entry, scale economies and cost structure concern the industry’s internal structure.

速记：年龄结构 = 人口；生活方式 = 社会；新技术 = 技术；集中度 = 行业内部。

Memory cue: Age: demographics. Lifestyle: social. Innovation: technology. Concentration: internal structure.

Q053 [优先练习 CORE] 行业分类依据

Basis of industry classification

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.53

题意 全球行业分类标准（GICS）按照什么依据对行业进行分类？

The Global Industry Classification Standard (GICS) classifies industries based on:

A	统计相似性	statistical similarities.
B	对经济周期的敏感程度	business-cycle sensitivities.
C	所提供的产品和 / 或服务	products and/or services supplied.

Q053 答案 / Answer: C

先判断题目问的是哪一类分类方法。GICS 主要按企业的主营业务及其提供的产品或服务归类；按收益率相关性分组属于统计方法，按经济景气变化划分周期性或防御性行业属于另一种分类思路。

GICS groups companies by principal business activity and the products or services they supply. Statistical grouping would use similarities such as return patterns. Grouping by sensitivity to the business cycle instead distinguishes cyclical from defensive businesses. These are different classification approaches.

易错点：GICS 不等于“周期性 / 防御性”分类。

Trap: GICS classification is distinct from cyclical versus defensive grouping.

Q084 GICS 分类层级

GICS classification hierarchy

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.84

题意 GICS 最宽泛的分类层级是什么？

The Global Industry Classification Standard's broadest level of classification is a(n):

A	板块 (sector)	sector.
B	行业 (industry)	industry.
C	行业组 (industry group)	industry group.

Q084 答案 / Answer: A

按从宽到窄记忆：Sector (板块) → Industry group (行业组) → Industry (行业) → Sub-industry (子行业)。一个板块下有多个行业组，因此 sector 是最广的层级。不要只凭中文“行业”一词判断范围。

Remember the hierarchy from broad to narrow: sector, industry group, industry, sub-industry. A sector contains industry groups, which contain industries and their sub-industries. Sector is therefore the broadest level. Knowing the order is sufficient to answer this question.

易错点：本题考层级顺序，不考各层级的具体数量。

Trap: The question tests the hierarchy, not the number of categories at each level.

原稿核验：原答案引用的是 2009 年的分类数量，不能直接作为现行数量记忆；本题只保留不依赖这些旧数量的层级关系。

Source check: The source quotes category counts from 2009. Those figures should not be memorized as current counts; the hierarchy answers the question without them.

Q081 行业分类体系的使用者

Users and developers of industry classifications

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.81

题意 行业分类体系由哪些机构开发和使用？

Industry classification systems are developed and used by:

A	仅商业机构	commercial entities only.
B	仅政府机构	governmental agencies only.
C	商业机构和政府机构都包括	both commercial entities and governmental agencies.

Q081 答案 / Answer: C

商业机构需要行业分类来构建指数、筛选可比公司和进行投资分析；政府机构需要分类来统计生产、就业等经济活动。因此两类机构都会建立和使用行业分类，但目的、覆盖范围和更新安排可以不同。

Commercial entities use industry classifications for indexes, peer comparisons and investment analysis. Government agencies use them to organize statistics on economic activity such as production and employment. Both therefore develop and use classifications, although their objectives, coverage and review practices may differ.

易错点：行业分类不只是证券指数供应商的工具。

Trap: Industry classification is not used only by securities-index providers.

Q089 分类体系的更新

Review of classification systems

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.89

题意 商业行业分类体系通常多久更新一次，相比政府分类体系如何？

Commercial industry classification systems are most likely updated:

A	更新频率较低	less frequently than government classification systems.
B	更新频率相同	as frequently as government classification systems.
C	更新频率较高	more frequently than government classification systems.

Q089 答案 / Answer: C

按本题比较，商业分类为投资、指数和同业分析服务，需要较及时反映公司业务及市场结构变化，所以通常调整更频繁。政府分类主要服务统计资料的一致性和可比性，更新周期往往较长。

In the comparison used by this question, commercial systems are generally updated more frequently to support current investment analysis and index construction. Government systems also need statistical continuity and comparability, so their review cycles are often longer. This is a general comparison, not a fixed timetable for every provider.

易错点：不要把“通常更频繁”背成所有体系都有相同固定周期。

Trap: A general frequency comparison is not a universal fixed schedule.

Q049 防御性与周期性行业

Defensive and cyclical industries

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.49

题意 收入与利润受整体经济波动影响最小的行业，最可能属于哪一类？

Industries whose revenues and profits are least affected by fluctuations in the overall economy are most likely:

A	成长型行业	growth industries.
B	周期性行业	cyclical industries.
C	防御性行业	defensive industries.

Q049 答案 / Answer: C

防御性行业提供基本商品或服务，需求在景气与衰退时都相对稳定，因此利润对经济周期较不敏感。周期行业的需求、价格或经营杠杆使盈利随经济大幅变化；成长行业则主要由长期结构性需求驱动。

Defensive industries supply basic goods or services with relatively stable demand across the cycle, making revenue and earnings less sensitive to aggregate economic conditions. Cyclical industries fluctuate more strongly. Growth industries are driven by structural demand expansion, which is a different distinction.

易错点：defensive 描述周期敏感度；growth 描述长期增长驱动力。

Trap: Defensive describes cyclicality; growth describes the source of long-run expansion.

Q059 周期性与防御性行业

Cyclical versus defensive industries

来源 / Source: S1 PDF p.51 (章节页 / section p.11); S2 answer p.59

题意 下列哪一个行业或板块最可能属于周期性行业？

Which of the following industries or sectors is most likely classified as cyclical?

A	公用事业	Utilities
B	工业	Industrials
C	医疗保健	Health care

Q059 答案 / Answer: B

周期性行业的需求与经济景气较相关。工业企业受资本开支、生产和订单周期影响较大，因此属于典型周期性板块。公用事业和医疗保健提供较为必要的服务，在本题分类中属于相对防御性的行业。

Cyclical industries are sensitive to economic activity. Industrials depend heavily on production, business investment and order cycles, so they are the best answer. Utilities and health care provide relatively essential services and are usually classified as defensive or non-cyclical for this comparison.

易错点：防御性不表示股价不会跌，只表示业务对周期相对不敏感。

Trap: Defensive describes relative business-cycle sensitivity, not immunity from stock-price losses.

Q042 人口因素与社会因素

Demographic and social influences

来源 / Source: S1 PDF p.48 (章节页 / section p.8); S2 answer p.42

题意 以下哪项最可能属于影响行业增长的人口因素？

Which of the following is most likely a demographic influence on industry growth?

A	生活方式	Lifestyle
B	年龄分布	Distribution of age
C	消费行为	Spending behavior

Q042 答案 / Answer: B

人口因素描述人口的结构和规模，例如年龄、性别、人口数量与增长。老龄化会改变医疗、养老等需求。生活方式和消费习惯更接近社会文化因素；它们也影响行业，但分类不同。

Demographic factors describe population size and composition, including age and gender. An aging population changes the mix of demand across industries. Lifestyle and spending behavior are generally classified as social or cultural influences rather than demographic structure.

易错点：人口“是谁、多少岁、多少人”；社会因素“怎样生活和消费”。

Trap: Demographics describe who people are; social factors describe how they live and spend.

Q055 外部环境与行业内部结构

External influences versus industry structure

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.55

题意 影响行业增长的外部因素最可能包括哪一项？

External factors affecting an industry's growth most likely include:

A	成本结构	cost structures.
B	规模经济	economies of scale.
C	技术影响	technological influences.

Q055 答案 / **Answer: C**

先把分析层次分开：宏观经济、技术、人口、政府及社会变化属于行业外部环境；成本结构与规模经济属于行业本身的经济特征。因此，技术改变需求、生产方式或产品替代关系，是本题的外部影响。

Separate the external environment from the economics within an industry. Macroeconomic, technological, demographic, governmental and social changes are external influences. Cost structures and economies of scale describe internal industry characteristics. Technology can change demand, production methods or substitution possibilities, making C the relevant external factor.

易错点：外部环境与五力 / 行业成本结构不是同一层次。

Trap: External conditions and internal industry structure are different analytical levels.

Q068 外部社会因素

External social influences

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.68

题意 下列哪一项属于影响行业增长的外部因素？

Which of the following is considered an external influence on industry growth?

A	社会趋势	Social trends
B	进入壁垒	Barriers to entry
C	行业集中度	Industry concentration

Q068 答案 / **Answer: A**

社会趋势来自行业外部，例如消费者习惯和价值观变化，可改变整个行业的需求。进入壁垒与行业集中度则描述行业竞争结构，通常放在五力或行业内部结构分析中。先分层次，再判断答案。

Social trends arise in the broader environment and can change demand across an industry. Entry barriers and concentration instead describe competitive conditions within the industry. Separating external environmental analysis from industry-structure analysis makes social trends the correct choice.

易错点：“影响行业”不代表一定是“行业外部”因素。

Trap: A factor can affect an industry without being external to its structure.

N2 波特五力与成本优势

Porter’s five forces and cost advantage

对应原题 / Questions: Q129, Q87, Q135, Q11

1. 五力包括现有竞争者竞争、潜在进入者威胁、替代品威胁、买方议价力、供应商议价力。公司生命周期不是单独一项五力；人口和技术也不是五力本身，而是可能影响五力的外部因素。

The five forces are rivalry, threat of entry, threat of substitutes, buyer power and supplier power. A company’s life-cycle stage is not a separate force. Demographics and technology are external factors that can affect these forces.

2. 客户越少且越集中、采购量越大、切换供应商越容易，买方议价力通常越强。先看题问的是买方还是卖方，避免把客户数量与行业内供应商数量混用。

Buyer power generally rises when customers are fewer and more concentrated, purchases are large and switching suppliers is easy. Identify whether the question concerns customers or suppliers before using concentration measures.

3. 标准化商品企业往往是价格接受者。获得便宜能源通常降低成本、扩大利润率，而不是允许企业单方面提高市场售价。成本优势与定价权不是同义词。

Standardized commodity producers are often price takers. Cheap energy generally lowers cost and improves margins rather than allowing management to set a higher market price. Cost advantage and pricing power are different concepts.

速记：便宜能源先影响成本；能不能提高售价取决于定价权。

Memory cue: Cheap energy changes cost first; higher selling prices require pricing power.

Q129 [优先练习 CORE] 波特五力

Porter's five forces

来源 / Source: S1 PDF p.63 (章节页 / section p.23); S2 answer p.129

题意 以下哪项不属于决定行业竞争强度的波特五力？

Porter's five determinants of the intensity of competition in an industry do not include the

A	买方议价能力	power of buyers.
B	替代品威胁	threat of substitutes.
C	公司所处的生命周期阶段	position of a company in its life-cycle stage.

Q129 答案 / Answer: C

五力包括：现有竞争者之间的竞争、新进入者威胁、替代品威胁、供应商议价能力、买方议价能力。生命周期可以帮助分析公司或行业，但不是五力中的一项。

The five forces are rivalry among existing competitors, threat of entrants, threat of substitutes, supplier bargaining power, and buyer bargaining power. Life-cycle position is a useful analytical concept, but it is not one of these five forces.

易错点：遇到 NOT / do not include，先完整默写五力再排除。

Trap: For a negative question, recall all five forces before choosing the item outside the framework.

Q087 行业竞争力量

Industry-level competitive forces

来源 / Source: S1 PDF p.56 (章节页 / section p.16); S2 answer p.87

题意 在完整行业分析中，下列哪项最能代表行业层面的力量？

Which of the following best describes an industry-level force in a thorough industry analysis?

A	新进入者威胁	Threat of new entrants
B	人口因素	Demographic influences
C	技术因素	Technological influences

Q087 答案 / Answer: A

新进入者威胁是波特五力之一，直接描述行业竞争和利润受到的压力。人口与技术属于更广泛的外部环境因素。两类分析都重要，但题目问行业层面的竞争力量，因此选 A。

The threat of new entrants is one of Porter’s five forces and directly describes competitive pressure within an industry. Demographic and technological influences belong to the broader external environment. Both levels matter, but the requested industry-level force is the threat of new entry.

易错点：看到“industry-level force”，先从波特五力识别。

Trap: For an industry-level competitive force, first consider Porter’s five forces.

Q135 [优先练习 CORE] 买方议价能力

Buyer bargaining power

来源 / Source: S1 PDF p.65 (章节页 / section p.25); S2 answer p.135

题意 在波特五力框架下，行业买方议价能力最直接受以下哪项影响？

Within Porter's five forces framework, the power of buyers within an industry is most likely influenced by the:

A	行业集中度	industry concentration.
B	更便宜的其他品牌是否可得	availability of lower priced alternative brands.
C	该行业产品的客户数量	number of customers for the industry's products.

Q135 答案 / Answer: C

买方越少、采购越集中，单个客户对供应商收入越重要，越有能力要求降价或更好的条款。因此客户数量是本题最直接的判断依据。买方转换成本、采购规模和自行生产能力也会影响议价能力。

Fewer, more concentrated buyers account for a larger share of suppliers' sales and can negotiate lower prices or better terms. Customer numbers therefore provide the clearest answer here. Buyer size, switching costs, and ability to produce the product internally also affect bargaining power.

易错点：C 是最直接的买方因素；不要把“其他品牌”机械地等同于跨行业替代品。

Trap: C directly describes the buyer side. Alternative brands should not automatically be treated as substitutes from another industry.

Q011 定价能力与成本优势

Pricing power versus cost advantage

来源 / Source: S1 PDF p.42 (章节页 / section p.2); S2 answer p.11

题意 一家自然资源公司能够获得廉价能源，其产品最可能以什么价格出售？

A natural resources company having access to cheap energy most likely will be able to sell its output:

A	市场价格	at market price.
B	高于市场的价格	above market price.
C	管理层单方面决定的价格	at a price unilaterally set by management.

Q011 答案 / Answer: A

同质化自然资源产品通常按市场供需形成的价格交易，公司是价格接受者。廉价能源降低单位成本，在相同市场价格下提高利润率，但不会自动赋予公司加价能力。成本优势与定价能力属于不同概念。

For a homogeneous natural-resource product, the firm is generally a price taker and sells at the prevailing market price. Cheap energy lowers costs and improves margins at that price; it does not automatically provide the ability to charge a premium.

易错点：低成本提高利润率，不等于可以单方面提高售价。

Trap: Lower costs improve margins without necessarily creating pricing power.

第 7 章 内在价值与绝对估值

Intrinsic Value and Absolute Valuation

先确定属于谁的现金流、发生在何时，再选择折现或资产基础模型。

Identify whose cash flows are valued and when they occur, then choose a present-value or asset-based model.

本章原题 / Original questions: 17 | 单元 / Units: V1, V2, V3, V4

V1 估值方法、FCFE 与资产基础估值

Valuation approaches, FCFE and asset-based value

对应原题 / Questions: Q95, Q131, Q110, Q16, Q61, Q34, Q37, Q102

1. 内在价值是模型估计，具有不确定性，也会随信息更新。若估计内在价值高于市价，证券相对该估计被低估。若预期回报高于投资者要求回报，在相同风险口径下也表示当前价格相对有吸引力。

Intrinsic value is a model estimate that is uncertain and changes with information. If estimated intrinsic value exceeds price, the security is undervalued relative to that estimate. Expected return above the required return likewise indicates an attractive price on a comparable risk basis.

2. 现值模型将未来现金流折现：DDM 折现股息，FCFE 模型折现归属普通股股东的自由现金流。倍数模型把价格与盈利、销售或现金流相比；资产基础模型重估资产减负债。

Present-value models discount future cash flows: DDM discounts dividends, and FCFE models discount free cash flows available to common equity. Multiple models compare prices with earnings, sales or cash flow. Asset-based models revalue assets and subtract liabilities.

3. FCFE=CFO- 固定资本投资 + 净借款。资本开支花钱，因此减；新借款扣偿还后的净额增加股东可用现金，因此加。净借款是借入减偿还，不是债务总余额。

FCFE=CFO-fixed capital investment+net borrowing. Capex uses cash and is subtracted. Net borrowing adds cash available to equity and is new borrowing minus debt repayment, not the total outstanding debt balance.

4. 资产基础估值先重估资产和负债，并扣除优先股等优先权益索偿（如有），再除普通股股数；不要只调整资产而忘负债，也不要重复加已经包含在总资产中的项目。资产易观察、流动资产占比高的公司通常更适用；大量无形资产使估计更困难。

For common-share asset-based value, revalue assets and liabilities, deduct preferred-equity claims if any, and divide the residual by common shares. Do not forget liabilities or double-count assets already included in totals. Observable assets and substantial current assets make the approach easier; large intangible assets make it harder.

```
FCFE = CFO - fixed capital investment + net borrowing

Common value/share = (adjusted assets - liabilities - preferred claims, if any) / common shares
```

速记：股东的钱用股东回报率；资产基础法先修资产负债表，再除股数。

Memory cue: Discount equity cash flows at the cost of equity; adjust the balance sheet before dividing by shares.

Q095 内在价值与市场价格

Intrinsic value versus market value

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.95

题意 与证券的市场价值相比，内在价值最可能具有什么特点？

In contrast to the market value of an equity security, intrinsic value is most likely.

A	无法被确定无疑地获知	not known with certainty.
B	在证券整个存续期保持不变	constant throughout the life of the security.
C	由供给与需求曲线交点决定	determined by the intersection of supply and demand.

Q095 答案 / Answer: A

市场价格是市场上可观察到的交易报价。内在价值是基于预期现金流、增长和风险等假设作出的估计，未来并不确定，因此它不能被精确无误地获知，也会随新信息而变化。供需交点决定的是市场价格。

Market value is observable through market prices. Intrinsic value is an estimate based on assumptions about future cash flows, growth and risk, all of which are uncertain. It is not known with certainty and changes as information changes. The supply-demand intersection describes market price, not the valuation estimate itself.

易错点：内在价值是估计值，不是永远不变的客观报价。

Trap: Intrinsic value is an estimate, not a permanently fixed observable quotation.

Q131 市价与内在价值

Market price versus intrinsic value

来源 / Source: S1 PDF p.64 (章节页 / section p.24); S2 answer p.131

题意 某证券每股内在价值为 $55，目前售价 $50。该证券属于什么状态？

If a security's intrinsic value is $55 per share and is currently selling for $50 per share, the security is:

A	被低估	undervalued.
B	合理定价	fairly valued.
C	被高估	overvalued.

Q131 答案 / Answer: A

估计内在价值 V = $55，大于现价 P = $50，因此价格低于估计合理价值，属于低估。估值上行空间按现价计算为 (55 - 50) / 50 = 10%；这只是基于给定估值的比较，不是确定的未来收益。

Estimated intrinsic value is $55 and market price is $50. Since P < V, the security is undervalued relative to the estimate. The valuation gap is $5, or 10% of the current price; this is an estimated gap, not a guaranteed realized return.

易错点：价格低于价值 = undervalued；价格高于价值 = overvalued。

Trap: Price below value means undervalued; price above value means overvalued.

Q110 预期回报与要求回报

Expected versus required return

来源 / Source: S1 PDF p.60 (章节页 / section p.20); S2 answer p.110

题意 股票 1 的预期 / 要求回报率为 9%/9%；股票 2 为 13%/11%；股票 3 为 15%/16%。其他条件不变，应买入哪只股票？

An investor gathers the following data regarding three stocks:

股票 Stock	预期回报率 Expected Rate of Return	投资者必要回报率 Investor's Required Rate of Return
1	9%	9%
2	13%	11%
3	15%	16%

All else being equal, the investor should purchase:

A	股票 1	Stock 1.
B	股票 2	Stock 2.
C	股票 3	Stock 3.

Q110 答案 / Answer: B

比较预期回报减去要求回报，而非只看预期回报绝对值。三只股票的差额依次为 0%、+2%、-1%。股票 2 提供超过其风险所要求的回报；股票 3 虽有最高预期回报，却不足以补偿其要求回报。

Compare expected return with the risk-appropriate required return. The spreads are 0%, +2%, and -1%. Stock 2 offers the only positive spread. Stock 3 has the highest expected return, but it falls short of the return required for its risk.

易错点：预期回报最高不等于最值得买；必须与同一股票的要求回报比较。

Trap: The highest expected return is not automatically best; compare each stock with its own required return.

Q016 估值模型分类

Categories of equity valuation models

来源 / Source: S1 PDF p.43 (章节页 / section p.3); S2 answer p.16

题意 股权自由现金流（FCFE）模型属于哪一类估值模型？

A free-cash-flow-to-equity model is a(n):

A	乘数 / 倍数模型	multiplier model.
B	现值模型	present value model.
C	资产基础估值模型	asset-based valuation model.

Q016 答案 / Answer: B

FCFE 模型把未来可分配给普通股股东的现金流，用股权必要回报率折现至今天，因此属于现值模型。P/E、P/B 等属于倍数模型；资产基础法则以资产价值减去债务等索偿权来估计权益价值。

The FCFE model discounts future cash flows available to common shareholders at the required return on equity, making it a present value model. Multiples use ratios such as P/E or P/B. Asset-based models estimate equity from asset values less other claims.

易错点：看到 discount / 折现，先想到现值模型。

Trap: Discounting future equity cash flows identifies a present value model.

Q061 股权自由现金流

Free cash flow to equity

来源 / Source: S1 PDF p.51 (章节页 / section p.11); S2 answer p.61

题意 股权自由现金流（FCFE）等于经营现金流，再进行哪一项调整？

Free-cash-flow-to-equity is equal to cash flow from operations:

A	减固定资本投资，再减净借款	less fixed capital investment less net borrowing.
B	减固定资本投资，再加净借款	less fixed capital investment plus net borrowing.
C	加固定资本投资，再减净借款	plus fixed capital investment less net borrowing.

Q061 答案 / Answer: B

FCFE = CFO - 固定资本投资 + 净借款。先用经营现金流支付资本开支，剩余现金再加上新增借款减偿还本金所得的净融资额，才得到可供普通股股东分配的现金。净借款为负时会减少 FCFE。

FCFE = CFO - fixed capital investment + net borrowing. Capital expenditure consumes operating cash. New borrowing less principal repayment supplies or uses additional cash, leaving the amount available to equity holders. A negative net-borrowing figure represents net debt repayment and reduces FCFE.

易错点：净借款 = 新借款 - 偿还本金；不要把加号机械理解成一定增加。

Trap: Net borrowing equals new borrowing minus principal repayment and can be negative.

Q034 资产基础估值法

Asset-based valuation

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.34

题意 资产基础估值法主要使用对公司哪些项目的价值估计？

Asset-based valuation most likely uses estimates of the company's:

A	仅资产	assets only.
B	资产与负债	assets and liabilities only.
C	资产、负债及预测现金流	assets, liabilities and projected cash flow.

Q034 答案 / Answer: B

资产基础法先估计资产和负债的市场价值或公允价值，再以资产减负债得出权益价值；若要得到普通股价值，还应扣除优先股等优先权益。它不以逐年预测并折现现金流作为核心步骤。

Asset-based valuation estimates the market or fair values of assets and liabilities and derives equity from their difference. Preferred claims must also be deducted when estimating common-equity value. Forecasting and discounting future cash flows is the central procedure of present value models instead.

易错点：不是只加总资产；债权人和优先权益的索偿也要扣除。

Trap: Do not add assets without subtracting liabilities and any prior equity claims.

Q037 资产基础法的适用条件

When asset-based valuation works best

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.37

题意 资产基础估值法最适合哪类资产占比较高的公司？

Asset-based valuation models are most appropriate for companies with a high proportion of.

A	缺乏流动性的资产	illiquid assets.
B	流动资产	current assets.
C	无形资产	intangible assets.

Q037 答案 / Answer: B

资产基础法依赖资产和负债的可估计公允价值。流动资产通常更接近近期可实现价值，因而较容易估计；缺乏流动性的资产、未入账的品牌或知识产权则较难可靠估值，可能使该方法低估经营价值。

Asset-based valuation works best when asset and liability values can be estimated reliably. Current assets are generally closer to realizable values. Illiquid assets and unrecognized intangibles can be difficult to value and may cause the method to miss substantial operating value.

易错点：资产多不等于好估值；关键是资产价值是否可观察、可估计。

Trap: The key is reliable asset valuation, not merely having many assets.

Q102 [优先练习 CORE] 资产基础估值

Asset-based valuation

来源 / Source: S1 PDF p.58 (章节页 / section p.18); S2 answer p.102

题意 公司账面数据：存货 €20 百万，固定资产净额 €80 百万，总资产 €150 百万，总负债 €90 百万，流通股 4 百万股。固定资产净额市值为账面值 125%，存货市值为账面值 90%。现价每股 €19.50。资产基础法估计的每股价值与现价相比如何？

An analyst gathers the following book value information about a company and its common shares:

Inventories	€20 million
Net fixed assets	€80 million
Total assets	€150 million
Total liabilities	€90 million
Shares outstanding	4 million

The analyst estimates the market value of net fixed assets to be 125% of book value and the market value of inventories to be 90% of book value. If the stock is currently trading at €19.50 per share, the asset-based value per share is most likely.

A	低于现价	less than the market price.
B	等于现价	equal to the market price.
C	高于现价	greater than the market price.

Q102 答案 / Answer: B

总资产已包含存货和固定资产，所以只调整差额：固定资产增值 80×25%=20；存货减值 20×10%=2。调整后资产 =150+20-2=168 百万；权益 =168-90=78 百万；每股价值 =78/4=€19.50，等于现价。

Total assets already include inventory and fixed assets, so adjust only their changes: fixed assets rise by 80 × 25% = 20 million; inventory falls by 20 × 10% = 2 million. Adjusted equity = 150 + 20 - 2 - 90 = 78 million. Per-share value = 78/4 = €19.50, equal to the market price.

易错点：不能将已包含在总资产中的资产全额再加一遍；只加减重估差额。

Trap: Do not double-count assets already included in total assets; apply only revaluation differences.

V2 Gordon 增长模型与可持续增长

Gordon growth and sustainable growth

对应原题 / Questions: Q35, Q152, Q154, Q82

1. Gordon 模型假设股息从下一期起永久以固定 g 增长，且要求回报率 r 大于 g：V0=D1/(r-g)。分子必须是下一期股息 D1，若给当前股息 D0，先乘 (1+g)。

The Gordon model assumes dividends grow at constant g indefinitely and requires r>g: V0=D1/(r-g). The numerator is the next dividend D1. If the current dividend D0 is given, first multiply it by (1+g).

2. 留存率 b=1- 派息率。在 ROE 与留存政策可持续、融资结构等假设稳定时，g=b×ROE。派息率是分给股东的部分；推动内部再投资增长的是留下来的部分。

Retention b=1-payout ratio. With sustainable ROE, retention policy and financing assumptions, g=b×ROE. Payout is distributed to shareholders; retained earnings support internal reinvestment and growth.

3. 最适合成熟、股息稳定、较不受经济周期影响的公司。初创高增长公司或周期性企业不宜把异常高增长率无限延长。年度 DDM 常假设年末支付，但实际也能按季度现金流和一致的折现率建模。

The model is most suitable for mature firms with stable dividends and relatively low cycle sensitivity. Do not extrapolate temporary high growth forever. Annual DDM commonly assumes year-end payments, but quarterly cash flows can be modeled using consistent timing and discount rates.

4. 计算流程固定为：派息率→留存率→g→D1→r-g→价值。r 与 g 很接近时估值对假设非常敏感；r≤g 时这个永续增长公式不适用。

Use the sequence payout→retention→g→D1→r-g→value. When r and g are close, the estimate is highly sensitive. The perpetuity-growth formula is not valid when r≤g.

```
b = 1 - payout ratio

g = b × ROE

D1 = D0 × (1 + g)

V0 = D1 / (r - g), with r > g
```

速记：先留存、后增长；先 D1、后除以 r-g。

Memory cue: Retention first, then growth; next dividend first, then divide by r-g.

Q035 股息折现的时间约定

Timing convention in the dividend discount model

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.35

题意 本题采用的股息折现模型假设股息何时支付？

The dividend discount model assumes that dividends are paid:

A	每季度	quarterly.
B	每半年	half yearly.
C	每年年末	at the end of each year.

Q035 答案 / **Answer: C**

本题使用年度 DDM：第 t 年的股息 Dt 发生在第 t 年末，现值为 Dt/(1+r)^t。关键是现金流与折现期数一致；这只是本题年度模型的时间约定，并不表示所有公司现实中只按年派息。

The annual DDM used here places each year’s dividend at that year-end, so its present value is Dt/(1+r)^t. The essential rule is to match cash-flow dates and discount periods. This annual convention does not mean all companies pay dividends only once per year.

易错点：现实可按季度派息；模型也可按实际频率调整折现。

Trap: Actual dividends may be quarterly, and the model can use the appropriate timing.

原稿核验：原题把“年末支付”作为年度 DDM 的默认约定；并非 DDM 只能处理年度股息。

Source check: Year-end payment is the annual-model convention in this item, not a restriction on all DDM applications.

Q152 Gordon 模型适用条件

Conditions for the Gordon growth model

来源 / Source: S1 PDF p.68 (章节页 / section p.28); S2 answer p.152

题意 Gordon 增长模型假设永久股息增长率与要求回报率满足什么关系？

The Gordon growth model assumes a dividend growth rate:

A	增长率低于要求回报率	less than the required rate of return.
B	增长率等于要求回报率	equal to the required rate of return.
C	增长率高于要求回报率	greater than the required rate of return.

Q152 答案 / Answer: A

V0 = D1 / (r - g) 要得到有限且正的估值，需要 r > g。若 r = g，分母为零；若 g > r，正股息代入会产生无经济意义的负值，而对应无限现金流的折现和也不收敛。

The formula V0 = D1 / (r - g) requires r > g for a finite positive value. Equality makes the denominator zero. If g exceeds r, the infinite discounted dividend stream does not converge and the formula cannot be used as a valid negative valuation.

易错点：暂时高增长可以超过 r；不能把这种增长率永久代入 Gordon。

Trap: Temporary growth may exceed r; it cannot persist forever in the Gordon model.

Q154 选择股息折现模型

Selecting a dividend discount model

来源 / Source: S1 PDF p.68 (章节页 / section p.28); S2 answer p.154

题意 Gordon 增长模型最适合估值下列哪种派息公司的普通股？

The Gordon growth model is most appropriate for valuing the equity of a dividend-paying:

A	电力公用事业公司	electric utility firm.
B	科技公司	technology company
C	汽车制造商	automobile manufacturer.

Q154 答案 / Answer: A

Gordon 假设股息以稳定速度永久增长，适合处于成熟阶段、派息较稳定且对经济周期较不敏感的公司。三项中电力公用事业最符合。高增长或周期波动较大的企业通常需要分阶段预测。

The Gordon model assumes a constant perpetual dividend-growth rate, making it most suitable for mature companies with relatively stable dividends and limited cyclical sensitivity. Among the choices, an electric utility fits best. Rapidly changing growth or cyclical cash flows often require a multistage model.

易错点：模型选择依据是增长与派息稳定性；行业名称只是判断线索。

Trap: Choose the model based on dividend and growth stability; industry labels are only clues.

Q082 [优先练习 CORE] Gordon 模型与可持续增长

Gordon model and sustainable growth

来源 / Source: S1 PDF p.55 (章节页 / section p.15); S2 answer p.82

题意 公司当前每股股利 D0=$1.00，股利支付率 60%，ROE=12%，必要回报率 10%。用 Gordon 增长模型估计的每股内在价值最接近多少？

An investor gathers the following information about a company and its common stock:

Current dividend per share (D0)	$1.00
Dividend payout ratio	60%
ROE	12%

If the required rate of return is 10%, using the Gordon growth model, the intrinsic value per share of the stock is closest to:

A	$14.56	$14.56.
B	$19.23	$19.23.
C	$20.15	$20.15.

Q082 答案 / Answer: C

第一步，留存率 b=1-60%=40%，增长率 g=ROE×b=12%×40%=4.8%。第二步，D1=1×1.048=$1.048。第三步，V0=D1/(r-g)=1.048/(10%-4.8%)=$20.15。

First, retention b = 1 - 60% = 40%, so sustainable growth g = ROE × b = 12% × 40% = 4.8%. Next, D_1 = 1.00 × 1.048 = $1.048. Finally, V_0 = D_1/(r - g) = 1.048/(0.10 - 0.048) = $20.15.

易错点：A 把 ROE 当折现率；B 忘记把 D0 增长到 D1。

Trap: A uses ROE as the discount rate; B fails to grow D_0 into D_1.

V3 多阶段股息与终值时点

Multistage dividends and terminal-value timing

对应原题 / Questions: Q93, Q140

1. 三阶段模型可把年轻企业分成高速增长、过渡和成熟稳定阶段；两阶段模型可分显性高增长期与稳定期。模型选择取决于未来增长路径，而非只看公司是否发股息。

A three-stage model can represent high growth, transition and mature stable growth. A two-stage model separates an explicit high-growth period from stable growth. Choose the model from the expected growth path, not merely whether dividends are paid.

2. 稳定期从第 n+1 期开始时，先计算 D(n+1)，终值 Vn=D(n+1)/(r-g 稳定) 属于第 n 期末。若问今天价值，再把前 n 期股息和 Vn 折现到今天；若只问第 n 期末价值，就不要多折现。

If stable growth starts in period n+1, calculate D(n+1) and place terminal value Vn=D(n+1)/(r-gstable) at the end of period n. For today’s value, discount the explicit dividends and Vn. If the question asks for Vn itself, stop there.

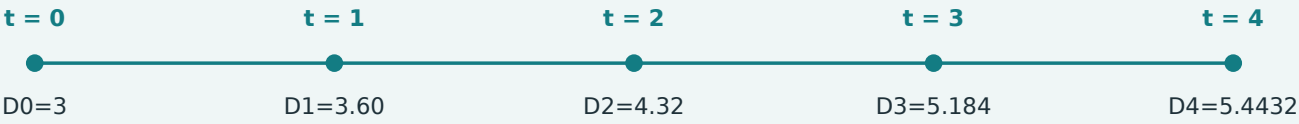

3. 第 140 题的关键不是复杂计算，而是“at the end of Year 3”。D3=3×1.2³，D4=D3×1.05，V3=D4/(0.10-0.05)。答案不是 V0，也不是 D3 除以 r-g。

The key phrase in Q140 is “at the end of Year 3.” D3=3×1.2³, D4=D3×1.05, and V3=D4/(0.10-0.05). The requested result is not V0 and does not use D3 in the perpetuity numerator.

```
Vn = D(n+1) / (r - stable growth)

V0 = sum[Dt / (1+r)^t] + Vn / (1+r)^n
```

Q140: V3 = D4 / (0.10 - 0.05) = 108.864

20% growth in years 1-3; 5% growth thereafter. The question asks for V3, not V0.

速记：终值分子往前取一期；终值位置停在稳定期开始前一期。

Memory cue: The terminal numerator is the next dividend; the terminal value sits one period before that dividend.

Q093 三阶段股利折现模型

Three-stage dividend discount model

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.93

题意 三阶段股利折现模型最适合为下列哪种公司估值？

A three-stage dividend discount model is most appropriate for valuing a company that is:

A	成熟公司	mature.
B	正在转向成熟期的公司	transitioning to maturity.
C	年轻且刚进入增长期的公司	young and entering the growth phase.

Q093 答案 / Answer: C

三阶段模型分别描述高增长期、增长放缓的过渡期和稳定成熟期。刚进入增长期的年轻公司可能经历完整三阶段，最适合这一框架。已成熟公司更接近稳定增长模型；接近成熟的公司剩余阶段较少。

A three-stage DDM models an initial high-growth phase, a transition phase with slowing growth, and a stable mature phase. A young company entering growth may have all three ahead of it. A mature company is closer to constant growth, while a company already approaching maturity has fewer distinct phases remaining.

易错点：模型阶段要匹配未来现金流路径，不是单纯“阶段越多越准确”。

Trap: Match model stages to expected cash-flow patterns; more stages are not automatically better.

Q140 [优先练习 CORE] 两阶段股息折现与终值

Two-stage DDM and terminal value

来源 / Source: S1 PDF p.66 (章节页 / section p.26); S2 answer p.140

题意 当前股息 D0 = $3；未来 3 年每年增长 20%，之后每年增长 5%；要求回报率 10%。第三年年末的股票内在价值最接近多少？

A company's current dividend (D0) of $3 per share is expected to grow 20% per year for three years, then 5% per year thereafter. If the required rate of return is 10%, using a multistage dividend discount model, the intrinsic value of the stock at the end of Year 3 is closest to:

A	$81.79	$81.79
B	$92.53	$92.53.
C	$108.86	$108.86.

Q140 答案 / **Answer: C**

先求 D3 = 3 × 1.20³ = $5.184；进入稳定增长后的 D4 = 5.184 × 1.05 = $5.4432。第三年末价值 V3 = D4 / (r - g) = 5.4432 / (0.10 - 0.05) = $108.864。题目问 t = 3 的价值，不需再折现至今天。

D3 = $3 × 1.20³ = $5.184. The first stable-growth dividend is D4 = $5.184 × 1.05 = $5.4432. Terminal value at year 3 is V3 = D4 / (r - g) = $108.864. The question asks for the value at t = 3, so do not discount it to today.

易错点：A 是终值的现值；B 是含前三年股息的 V0。先圈出估值时点。

Trap: A is the present value of the terminal value; B is today's full value including the first three dividends.

V4 优先股：永续年金与有限期年金

Preferred shares: perpetuities and finite annuities

对应原题 / Questions: Q114, Q118, Q142

1. 不赎回、不可转、永续固定股息优先股可用 V=D/r。若给的是股息率 c 与面值 F，先算每年股息 D=F×c；股息率与投资者要求回报率不是同一个数。

A non-callable, non-convertible perpetual preferred share with constant dividends can be valued as V=D/r. If a dividend rate c and par F are given, first calculate annual dividend D=F×c. The contractual dividend rate is not the required return.

2. 有到期日与偿还面值时，价值 = 股息年金现值 + 面值现值。半年付息、题目按名义年收益率口径时，把年要求回报率除 2、年数乘 2；求出的 PMT 是每半年的股息，不是年度股息。

With maturity and redemption at par, value equals the dividend-annuity present value plus discounted par. Under the nominal annual yield convention used in the question, semiannual payments use r/2 and 2×years. The resulting PMT is the semiannual dividend.

3. 先检查是否永续再选公式：第 114 与 118 题为永续固定股息；第 142 题五年到期，要用 10 期半年现金流。不能把 125×7.2% 直接当作半年股息。

Check whether the security is perpetual before choosing a formula. Q114 and Q118 use constant perpetuity logic; Q142 matures after five years and has ten semiannual periods. Multiplying 125 by 7.2% does not give its semiannual dividend.

Perpetual preferred value = fixed dividend per period / required return per period

Finite preferred value = D × [1-(1+i)^(-N)]/i + F × (1+i)^(-N)

速记：永续 D/r；有限期加还本；半年把利率与期数同时改。

Memory cue: Perpetuity: D/r. Finite maturity: include redemption. Semiannual: adjust both rate and periods.

Q114 [优先练习 CORE] 永续优先股估值

Perpetual preferred share valuation

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.114

题意 不可赎回、不可转换优先股面值为 $25，年股息率为 5%，要求回报率为 4%。内在价值最接近多少？

A $25 par value non-callable, non-convertible preferred share pays an annual dividend rate of 5%. If the required rate of return is 4%, the preferred share's intrinsic value is closest to:

A	$25.25	$25.25
B	$26.00	$26.00.
C	$31.25	$31.25.

Q114 答案 / **Answer: C**

题目未给到期日，按固定股息永续优先股处理。每年现金股息 D = 25 × 5% = $1.25；价值 V = D / r = 1.25 / 4% = $31.25。股息率用于算现金额，要求回报率用于折现。

Treat the stated preferred share as a perpetual fixed-dividend instrument because no maturity is supplied. Annual dividend D = $25 × 5% = $1.25. Its value is D / r = 1.25 / 0.04 = $31.25. The dividend rate determines cash flow; the required return discounts it.

易错点：5% 与 4% 职能不同，不能互换，也不能只把差额加到面值上。

Trap: Do not interchange the dividend rate and required return or simply add their spread to par.

Q118 永续优先股估值

Perpetual preferred share valuation

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.118

题意 不可赎回、不可转换的永续优先股每年支付固定股息 $1.20，现价 $20，要求回报率 6%。该股票最可能如何定价？

A non-callable, non-convertible perpetual preferred share pays a level dividend of $1.20 with a current market price of $20. If an investor has a required rate of return of 6%, the preferred shares are most likely.

A	被低估	undervalued.
B	合理定价	fairly valued.
C	被高估	overvalued.

Q118 答案 / **Answer: B**

固定永续现金流的价值 V = D / r = 1.20 / 0.06 = $20。估值与市场价相等，因此合理定价。也可反算股息收益率 1.20 / 20 = 6%，恰好等于投资者要求回报率。

A level perpetual dividend has value V = D / r = $1.20 / 0.06 = $20. This equals the market price, so the share is fairly valued. Equivalently, its dividend yield is 1.20 / 20 = 6%, matching the required return.

易错点：比较的是估计内在价值与现价；本题并非因为价格低于面值而低估。

Trap: Compare estimated intrinsic value with market price, not with an assumed par value.

Q142 [优先练习 CORE] 有到期日优先股估值

Valuation of a term preferred share

来源 / Source: S1 PDF p.66 (章节页 / section p.26); S2 answer p.142

题意 不可赎回、不可转换优先股面值 €100，要求年回报率 7.2%，5 年到期，内在价值 €125。每半年支付一次的股息金额最接近多少？

An analyst gathers the following information about a company's non-callable, non-convertible preferred stock:

Par value per share	€100
Required rate of return	7.2%
Maturity	5 years

If the stock's intrinsic value is €125, the company's semi-annual dividend on the preferred stock is closest to:

A	€6.62	€6.62.
B	€7.20	€7.20.
C	€9.00	€9.00.

Q142 答案 / Answer: A

本题按答案的半年计息口径：i = 7.2% / 2 = 3.6%，n = 5 × 2 = 10。价格等于股息年金现值加到期面值现值：125 = D × [1 - (1.036)^(-10)] / 0.036 + 100 × (1.036)^(-10)。解得每半年 D = €6.6212。

Using the solution's semiannual convention, i = 7.2% / 2 = 3.6% and n = 10. Solve 125 = D × [1 - (1.036)^(-10)] / 0.036 + 100 × (1.036)^(-10). The semiannual dividend is €6.6212, closest to €6.62.

易错点：有到期日就要加入面值偿还；不能用永续公式 D = V × r。

Trap: A maturity date requires including repayment of par. Do not apply the perpetual formula D = V × r.

第 8 章 相对估值与合理市盈率

Relative Valuation and Justified P/E

分清价格倍数的分母、企业价值的归属，以及增长和派息怎样进入估值。

Match each multiple to its denominator and understand how growth, payout and required return drive justified P/E.

本章原题 / Original questions: 14 | 单元 / Units: R1, R2, R3

R1 价格倍数与可比口径

Price multiples and comparability

对应原题 / Questions: Q1, Q116, Q51, Q58, Q128

1. P/E= 价格 /EPS，P/B= 价格 / 每股账面权益，P/S= 价格 / 每股销售，P/CF= 价格 / 每股现金流。分子分母必须同口径：每股配每股，或总市值配整体指标。

P/E=price/EPS; P/B=price/book value per share; P/S=price/sales per share; P/CF=price/cash flow per share. Match per-share quantities, or pair total equity market value with the corresponding aggregate measure.

2. Trailing 用过去已实现的指标，forward 或 leading 用预计未来指标。去年亏损使历史 P/E 失去常见的经济解释，但未来盈利或正现金流仍可能使 forward P/E 或 P/CF 可用；不能因为一个分母为负就断言所有倍数都无意义。

Trailing multiples use realized historical fundamentals; forward or leading multiples use expected future fundamentals. A recent loss undermines the usual interpretation of trailing P/E, while positive forecast earnings or cash flow may still support other multiples.

3. 与同业或历史倍数比较时，高倍数只表示相对更贵，低倍数只表示相对更便宜；进一步判断是否错价还要看增长、风险、盈利质量和会计口径。题目说“based only on this information”时才按提供数据做相对排名。

A higher multiple is relatively more expensive and a lower multiple relatively cheaper. Mispricing also depends on growth, risk, earnings quality and accounting comparability. When the question says “based only on this information,” rank using the supplied data.

4. 会计政策差异会降低倍数可比性；现金流也有不同定义，P/CF 必须保持一致。第 128 题按原表识别历史 P/B、P/E 与 P/CF，英文选项两处拼写错误已另行标注。

Accounting policies reduce comparability, and cash-flow definitions can differ, so P/CF needs a consistent denominator. Q128’s historical table identifies P/B, P/E and P/CF; its two option typos are flagged separately.

速记：先确认分母是什么、哪个期间，再比较倍数高低。

Memory cue: Identify the denominator and its time period before comparing multiples.

Q001 [优先练习 CORE] 亏损公司的估值倍数

Multiples when earnings are negative

来源 / Source: S1 PDF p.41 (章节页 / section p.1); S2 answer p.1

题意 公司刚结束的年度出现亏损，以下哪一估值倍数最缺乏意义？

A firm reports negative earnings for the year just ended. The price multiple of the firm's stock that is least likely to be meaningful is:

A	历史市盈率 (trailing P/E)	trailing price to earnings.
B	市价现金流比率 (P/CF)	price to cash flow.
C	预期市盈率 (forward/leading P/E)	leading price to earnings.

Q001 答案 / **Answer: A**

历史市盈率 = 当前股价 / 过去年度每股收益。分母为负时，负市盈率不适合按通常的“倍数越低越便宜”逻辑比较。公司虽亏损，经营现金流仍可能为正；若未来盈利转正，预期市盈率也可能有用。

Trailing P/E divides the current share price by past earnings per share. Negative past earnings make the ratio unsuitable for conventional cheap-versus-expensive comparisons. Positive cash flow may still support P/CF, and positive forecast earnings may support forward P/E.

易错点：亏损不代表现金流一定为负，也不代表未来盈利一定为负。

Trap: A loss does not necessarily imply negative cash flow or negative forecast earnings.

Q116 估值倍数的时间口径

Timing convention in valuation multiples

来源 / Source: S1 PDF p.61 (章节页 / section p.21); S2 answer p.116

题意 采用乘数估值模型时，作为分母的基本面变量可以采用什么口径？

When using a multiplier model, the fundamental variable is stated on:

A	只能用历史口径	a trailing basis only.
B	只能用预测口径	a forward basis only.
C	可以用预测口径，也可以用历史口径	either a forward basis or a trailing basis.

Q116 答案 / **Answer: C**

倍数分母可以是过去一年的 EPS 等实际数据，也可以是下一年的预测数据。两种方法都成立，但比较公司或套用同业倍数时必须保持时间口径一致，不能把 forward 倍数乘到 trailing 盈利上。

The fundamental variable can be historical, such as trailing EPS, or forecast, such as next year's EPS. Both conventions are valid. Comparisons and valuation calculations must remain consistent: a forward multiple should be applied to forward fundamentals.

易错点：比较前先检查 trailing / forward，不能混用。

Trap: Check whether every input is trailing or forward before comparing multiples.

Q051 估值倍数的可比性

Comparability limits of valuation multiples

来源 / Source: S1 PDF p.49 (章节页 / section p.9); S2 answer p.51

题意 以价格倍数给股票估值的缺点是什么？

A disadvantage of using price multiples to value stocks is that:

A	倍数不容易计算	multiples are not easily calculated.
B	无法进行横截面比较	cross-sectional comparisons are not possible.
C	不同会计方法产生不易跨公司比较的结果	accounting methods produce different results that are not easily comparable across companies.

Q051 答案 / **Answer: C**

倍数易算，也便于横向比较和历史比较，正是它们的优点。但收入、利润、账面价值和现金流可能受会计政策、准则及一次性项目影响。比较前应尽量统一口径，并同时考虑增长、风险和盈利能力。

Multiples are easy to calculate and useful for cross-sectional and time-series comparisons. Their limitation is that accounting policies, standards, and one-off items may make financial denominators inconsistent. Analysts should normalize definitions and also compare growth, risk, and profitability.

易错点：同一行业、同一个 P/E 数字，也未必有相同经济含义。

Trap: The same P/E in the same industry need not imply the same economic valuation.

Q058 可比公司的价格倍数

Comparable-company price multiples

来源 / Source: S1 PDF p.51 (章节页 / section p.11); S2 answer p.58

题意 三家可比公司及行业平均数据如下：公司 1 的 P/S=8.9、P/B=5.7；公司 2 为 3.2、2.6；公司 3 为 5.7、2.3；行业平均为 6.2、4.7。仅根据这些信息，哪家公司最可能被高估？

An analyst gathers the following information about an industry and three comparable companies within the industry:

	公司 1 Company 1	公司 2 Company 2	公司 3 Company 3	行业平均 Industry Average
Price/sales	8.9	3.2	5.7	6.2
Price/book	5.7	2.6	2.3	4.7

Based only on this information, the most overvalued company is

A	公司 1	Company 1.
B	公司 2	Company 2
C	公司 3	Company 3.

Q058 答案 / Answer: A

公司 1 的 P/S（8.9）和 P/B（5.7）均高于另外两家公司及行业平均，两项指标给出一致的相对昂贵信号，因此选公司 1。这个判断以风险、增长、盈利能力等其他条件可比为前提。

Company 1 has both the highest P/S, 8.9, and the highest P/B, 5.7; both also exceed the industry averages. The two measures therefore consistently identify Company 1 as relatively expensive. This is a comparison based only on the supplied data and assumes other valuation drivers are comparable.

易错点：高倍数是相对昂贵的线索；实际分析仍须检查增长、风险和盈利质量。

Trap: A high multiple signals relative expensiveness, but growth, risk and profitability must also be assessed.

Q128 [优先练习 CORE] 相对估值与历史基准

Relative valuation against historical multiples

来源 / Source: S1 PDF p.63 (章节页 / section p.23); S2 answer p.128

题意 当前 EPS = $3、每股现金流 = $4、每股账面价值 = $40；历史 P/B = 0.6、P/E = 12、P/CF = 8。若现价 $30，仅根据这些信息，哪项指标显示股票被高估？

An analyst gathers the following information about a company and its historical price multiples:

	当前 Current	历史 Historical
EPS	$3.00	---
Cash flow per share	$4.00	---
Book value per share	$40.00	---
P/B	---	0.6
P/E	---	12.0
P/CF	---	8.0

Based only on this information, if the share price is $30, the company's shares are most likely overvalued based on:

A	市净率 P/B	P/B.
B	市盈率 P/E（原题误排为 P/F）	P/F
C	市现率 P/CF（原题误排为 P/CE）	P/CE

Q128 答案 / Answer: A

当前 P/B = 30 / 40 = 0.75，高于历史 0.6，故按该基准偏贵。当前 P/E = 30 / 3 = 10，低于 12；P/CF = 30 / 4 = 7.5，低于 8。只有市净率发出高估信号。

Current P/B is 30 / 40 = 0.75, above the historical 0.6, indicating overvaluation on that benchmark. Current P/E is 10 versus 12 historically; P/CF is 7.5 versus 8. Only P/B indicates that the shares are expensive relative to history.

易错点：每个当前倍数必须与同名历史倍数比较；不能把 0.75 与 P/E 的 12 比。

Trap: Compare each multiple with its matching historical benchmark.

原稿核验：已目视核对原题：B 印为 P/F，C 印为 P/CE；表格和答案说明对应 P/E、P/CF。本讲义中文按明确语义校正，保留原题英文以便追溯。

Source check: Visual inspection confirms source option typos: B says P/F and C says P/CE. The table and solution identify the intended measures as P/E and P/CF. The Chinese translation corrects these while the original English remains traceable.

R2 企业价值 EV 与 EV/EBITDA

Enterprise value and EV/EBITDA

对应原题 / Questions: Q52, Q98, Q63

1. 企业价值对应整体经营业务的资本提供者。基本形式为普通股市值 + 优先股市值 + 债务市值 - 现金及非经营投资；并表口径需要时还要加非控制权益。题库按简化形式处理。

Enterprise value relates to the operating business financed by all capital providers. A basic form is common-equity market value+preferred-equity market value+debt market value-cash and non-operating investments; consolidated analyses may also add non-controlling interests. This set uses the simplified form.

2. 债务原则上用市值，不能把账面债务变化自动当成市值变化。其他条件不变，优先股市值增加会提高 EV，现金或非经营投资增加会降低按该公式计算的 EV。

Debt should conceptually use market value; a book-value change does not automatically imply the same market-value change. All else equal, more preferred-equity value raises EV, while more cash or non-operating investments reduces EV under the formula.

3. EV 要与服务所有资金提供者的经营指标配对，如 EBITDA；股权价格倍数则配股东层面的指标。EV/EBITDA 低表示付较少企业价格购买每单位 EBITDA，前提是可比公司的业务、增长和风险足够相似。

Pair EV with operating measures available to all capital providers, such as EBITDA; equity-price multiples use equity-level measures. A lower EV/EBITDA means paying less enterprise value per unit of EBITDA, assuming comparable business economics, growth and risk.

EV = common equity MV + preferred equity MV + debt MV - cash/non-operating investments

EV/EBITDA = enterprise value / EBITDA

速记：EV 是整体企业价格，P/E 是股东价格；不要混配分子分母。

Memory cue: EV values the overall business; P/E values equity. Match the numerator and denominator.

Q052 企业价值的组成

Components of enterprise value

来源 / Source: S1 PDF p.50 (章节页 / section p.10); S2 answer p.52

题意 其他条件不变，下列哪一项增加，最可能使公司的企业价值上升？

All else being equal, an increase in which of the following most likely increases a company's enterprise value?

A	债务账面价值	Book value of debt
B	投资的市场价值	Market value of investments
C	优先股市场价值	Market value of preferred stock

Q052 答案 / Answer: C

企业价值 EV = 普通股市值 + 优先股市值 + 债务市值 - 现金及相关非经营性投资。优先股市值属于加项，因此上升会提高 EV。债务应采用市场价值；现金或短期投资属于扣减项。

Enterprise value equals common equity market value plus preferred equity market value plus debt market value, less cash and relevant non-operating investments. Preferred equity is an addition, so a higher market value raises EV. Debt enters at market value, while cash and short-term investments are deducted.

易错点：看清 market value 与 book value；增加扣减项会降低 EV。

Trap: Distinguish market from book value, and additions from deductions.

Q098 企业价值倍数的模型类别

Model category for enterprise value multiples

来源 / Source: S1 PDF p.57 (章节页 / section p.17); S2 answer p.98

题意 企业价值在本题的估值模型分类中，最可能与哪一类模型相关？

Enterprise value is most likely associated with:

A	倍数模型	multiplier models.
B	现值模型	present value models.
C	资产基础估值模型	asset-based valuation models.

Q098 答案 / **Answer: A**

企业价值倍数如 EV/EBITDA、EV/Revenue，用企业整体价值与相应经营指标比较，属于倍数模型。现值模型将未来现金流折现；资产基础法以资产估值减负债等求净值。题目对应的是 EV 倍数这一类别。

Enterprise-value multiples, such as EV/EBITDA and EV/revenue, compare the value of the business with an operating fundamental and belong to multiplier models. Present-value models discount future benefits, while asset-based models value net assets. The question refers to the enterprise-value-multiple category.

易错点：EV 是价值概念；本题归类为倍数，不表示 EV 绝不能通过现金流折现估计。

Trap: EV is a value concept; this classification does not imply that discounted cash flows can never estimate EV.

Q063 [优先练习 CORE] EV/EBITDA 比较

EV/EBITDA comparison

来源 / Source: S1 PDF p.52 (章节页 / section p.12); S2 answer p.63

题意 同一行业三家公司的数据（百万美元）：公司 1 EV=100、EBITDA=8；公司 2 为 150、10；公司 3 为 200、15。根据企业价值倍数，哪家公司最可能最被低估？

An analyst gathers the following data for three companies in the same industry (in millions):

公司 Company	企业价值（EV） Enterprise Value (EV)	息税折旧摊销前利润（EBITDA） Earnings Before Interest, Taxes, Depreciation, &Amortization (EBITDA)
1	$100	$8
2	$150	$10
3	$200	$15

Based on enterprise value multiples, which of the three companies is likely the most undervalued?

A	公司 1	Company 1
B	公司 2	Company 2
C	公司 3	Company 3

Q063 答案 / **Answer: A**

逐一计算 EV/EBITDA：公司 1=100/8=12.5 倍；公司 2=150/10=15 倍；公司 3=200/15=13.33 倍。在其他条件可比时，每单位 EBITDA 所支付的企业价值越低，相对估值越便宜，因此选公司 1。

Calculate each multiple: Company 1 = 100/8 = 12.5x; Company 2 = 150/10 = 15.0x; Company 3 = 200/15 = 13.33x. Company 1 has the lowest enterprise value per unit of EBITDA and is the most likely undervalued under the question’s comparable-company assumptions.

易错点：不能仅比较 EV 总额；必须除以相应盈利指标。

Trap: Compare the ratio, not enterprise value alone.

R3 从 Gordon 推导合理 P/E

Deriving justified P/E from Gordon growth

对应原题 / Questions: Q36, Q21, Q122, Q106, Q112, Q77

1. 从 V0=D1/(r-g) 出发，D1=E1×派息率，因此 forward P/E= 派息率 /(r-g)=(1-b)/(r-g)。若除以 E0，则 trailing P/E= 派息率×(1+g)/(r-g)，多出 (1+g)。

Starting with V0=D1/(r-g) and D1=E1×payout, forward P/E=payout/(r-g)=(1-b)/(r-g). Dividing by E0 instead gives trailing P/E=payout×(1+g)/(r-g), adding the factor (1+g).

2. 题目可反求任意变量：派息率 =forward P/E×(r-g)；g=r- 派息率 /(forward P/E)；若 g=b×ROE，则 ROE=g/b。先检查给的是留存率还是派息率，再代入。

Rearrange for the missing input: payout=forward P/E×(r-g); g=r-payout/(forward P/E); and ROE=g/b when g=b×ROE. First distinguish retention from payout.

3. 更高增长或更低要求回报通常支持更高倍数。派息率与增长可能相互影响，因此比较两家公司不能只看某一个输入。第 106 题两组不同派息与增长率最后都得到 10 倍。

Higher growth or a lower required return typically supports a higher multiple. Payout and growth may interact, so do not compare firms using one input alone. Q106's different payout and growth assumptions both yield 10 times forward earnings.

4. 题目未标明 P/E 期间时应说明假设。第 77 题原答案把 22 倍当 forward P/E，得到 g 约 6.68%；若当 trailing P/E，精确值约 6.56%，本题仍最接近选项 B，但计算逻辑不同。

State the convention if the P/E period is unspecified. Q77's solution treats 22 as forward P/E and obtains g≈6.68%. Treating it as trailing gives approximately 6.56%; B remains the closest option, but the algebra differs.

Justified forward P/E = payout / (r - g)

Justified trailing P/E = payout × (1+g) / (r - g)

g = r - payout / forward P/E

ROE = g / retention

速记：Forward 没有 (1+g)，trailing 有；留存率推动增长，派息率进 P/E 分子。

Memory cue: Forward omits (1+g); trailing includes it. Retention drives growth; payout enters the P/E numerator.

Q036 [优先练习 CORE] 市盈率反推派息率

Inferring payout from forward P/E

来源 / Source: S1 PDF p.47 (章节页 / section p.7); S2 answer p.36

题意 公司预期 P/E 为 8，必要回报率 12%，股息增长率 4%。根据 Gordon 模型，派息率最接近多少？

An analyst gathers the following information about a company and its common stock:

Forward P/E	8
Required rate of return	12%
Dividend growth rate	4%

Using the Gordon growth model, the company's dividend payout ratio is closest to:

A	8%	8%.
B	33%	33%.
C	64%	64%.

Q036 答案 / Answer: C

Gordon 模型给出 P0=D1/(r-g)。两边除以 E1，得到 P0/E1=(D1/E1)/(r-g)= 派息率 /(r-g)。因此派息率 =8×(12%-4%)=64%。8% 是预期股息收益率 D1/P0，不是派息率。

From P0=D1/(r-g), divide by E1 to obtain forward P/E=payout ratio/(r-g). Thus payout=8×(0.12-0.04)=0.64, or 64%. The 8% difference between r and g is the forward dividend yield, not the earnings payout ratio.

易错点：payout=D/E；dividend yield=D/P，两者分母不同。

Trap: Payout is D/E; dividend yield is D/P.

Q021 [优先练习 CORE] 合理预期市盈率与 ROE

Justified forward P/E and ROE

来源 / Source: S1 PDF p.45 (章节页 / section p.5); S2 answer p.21

题意 公司预期 P/E 为 8，留存率为 45%，投资者必要回报率为 10%。ROE 最接近多少？

An analyst gathers the following information about a company:

Estimated forward P/E ratio	8
Retention rate	45%

If the investor's required rate of return is 10%, the company's ROE is closest to:

A	6.9%	6.9%.
B	8.0%	8.0%.
C	9.7%	9.7%.

Q021 答案 / Answer: A

先求派息率 =1-45%=55%。Gordon 关系为 P0/E1=(1-b)/(r-g)，故 8=0.55/(0.10-g)，得到 g=3.125%。再用可持续增长率 g=b×ROE，ROE=3.125%/45%=6.944%，约为 6.9%。

The payout ratio is 1-0.45=0.55. From forward P/E=(1-b)/(r-g), 8=0.55/(0.10-g), so g=3.125%. Using sustainable growth g=b×ROE gives ROE=3.125%/45%=6.944%, approximately 6.9%.

易错点：P/E 公式分子是派息率；g 公式乘数是留存率。

Trap: Use the payout ratio in the P/E numerator and the retention ratio in the growth equation.

Q122 [优先练习 CORE] 合理远期市盈率

Justified forward P/E

来源 / Source: S1 PDF p.62 (章节页 / section p.22); S2 answer p.122

题意 股息支付率 40%，权益要求回报率 15%，ROE 为 20%。合理远期 P/E 最接近多少？

An analyst gathers the following information about a company:

Dividend payout ratio	40%
Required rate of return on equity	15%
Return on equity	20%

The justified forward P/E ratio for the company's stock is closest to:

A	5.7	5.7.
B	8.0	8.0.
C	13.3	13.3

Q122 答案 / Answer: C

先求留存率 b = 1 - 40% = 60%，再求可持续增长 g = b × ROE = 60% × 20% = 12%。合理远期 P/E = 支付率 / (r - g) = 0.40 / (0.15 - 0.12) = 13.33。

Retention b = 1 - payout = 60%. Sustainable growth is g = b × ROE = 0.60 × 20% = 12%. Justified forward P/E is payout / (r - g) = 0.40 / (0.15 - 0.12) = 13.33.

易错点：g 用留存率，不用支付率；r 是要求回报率，不是 ROE。

Trap: Use retention to calculate growth. The discount rate r is the required return, not accounting ROE.

Q106 合理远期市盈率

Justified forward P/E

来源 / Source: S1 PDF p.59 (章节页 / section p.19); S2 answer p.106

题意 公司与同业股息支付率分别为 40%、50%，预计未来股息增长率分别为 5%、4%。若要求回报率均为 9%，公司的合理远期 P/E 与同业相比如何？

An analyst gathers the following information about common shares:

	公司 Company	同业组 Peer Group
Dividend payout ratio	40%	50%
Estimated future dividend growth rate	5%	4%

If the investor's required rate of return is 9%, the company's justified forward P/E is:

A	低于同业	less than the peer group's justified forward P/E.
B	等于同业	the same as the peer group's justified forward P/E.
C	高于同业	greater than the peer group's justified forward P/E.

Q106 答案 / Answer: B

合理远期 P/E = 股息支付率 / (r - g)。公司：0.40 / (0.09 - 0.05) = 10；同业：0.50 / (0.09 - 0.04) = 10。公司的较低支付率与较高增长率在本题恰好互相抵销。

Justified forward P/E equals the payout ratio divided by (r - g). The company has 0.40 / (0.09 - 0.05) = 10; peers have 0.50 / (0.09 - 0.04) = 10. The lower payout and higher growth offset each other in this case.

易错点：不能只比较 g 或支付率；必须把两者一起放进公式。

Trap: Do not compare growth or payout alone; use both inputs in the formula.

Q112 Gordon 模型反求回报率

Required return from the Gordon model

来源 / Source: S1 PDF p.60 (章节页 / section p.20); S2 answer p.112

题意 当前每股股息 D0 = $4，当前 EPS = $5，股息增长率为 4%。Gordon 模型估值为 $92，要求回报率最接近多少？

An analyst gathers and estimates the following information about a company's stock:

Current dividend per share (D0)	$4
Current EPS	$5
Dividend growth rate	4%

If the estimated stock value using the Gordon growth model is $92 per share, the required return on this stock is closest to:

A	8.35%	8.35%
B	8.52%	8.52%.
C	9.44%	9.44%.

Q112 答案 / Answer: B

先把当前股息推进一期：D1 = 4 × 1.04 = $4.16。由 V0 = D1 / (r - g)，反解 r = D1 / V0 + g = 4.16 / 92 + 4% = 8.5217%。EPS 在本题是干扰数据。

First calculate next year's dividend: D1 = 4 × 1.04 = $4.16. Rearranging V0 = D1 / (r - g) gives r = D1 / V0 + g = 4.16 / 92 + 4% = 8.5217%. EPS is not needed.

易错点：A 错用 D0；C 把 EPS 当成股息。Gordon 分子必须是下一期股息。

Trap: A uses D0; C substitutes EPS for dividends. The numerator must be the next dividend.

Q077 用合理 P/E 反推增长率

Inferring growth from justified P/E

来源 / Source: S1 PDF p.54 (章节页 / section p.14); S2 answer p.77

题意 公司当前股价 €36，P/E=22；名义无风险利率 2.5%，风险溢价 6.0%，预期留存率 60%。公司的股利增长率最佳估计是多少？

An analyst gathers the following information about a company and the economy:

Current share price	€36
P/E ratio	22
Nominal risk-free rate	2.5%
Risk premium	6.0%
Expected retention rate	60%

The best estimate of the company's dividend growth rate is:

A	5.8%	5.8%.
B	6.7%	6.7%.
C	7.4%	7.4%.

Q077 答案 / Answer: B

按答案将 22 视为预期 P/E：必要回报 r=2.5%+6.0%=8.5%；支付率 p=1-60%=40%。由 P0/E1=p/(r-g)，得 g=8.5%-0.40/22=6.6818%，选 6.7%。股价 €36 无需使用。

Following the source’s forward-P/E assumption, required return r = 2.5% + 6.0% = 8.5%, and payout p = 1 - 60% = 40%. From P_0/E_1 = p/(r - g), g = 8.5% - 0.40/22 = 6.6818%, closest to 6.7%. The share price is unnecessary.

易错点：分子用支付率，不是留存率；先辨别 forward 与 trailing P/E。

Trap: Use payout, not retention, and identify whether P/E is forward or trailing.

原稿核验：原题只写 P/E，没有说明 forward 或 trailing；原答案明确按 forward P/E 处理。若按 trailing P/E，方程应为 22=0.4(1+g)/(0.085-g)，得到 g 约 6.56%，公式不同。

Source check: The stem does not label P/E as forward or trailing; the supplied solution explicitly assumes forward P/E. A trailing P/E instead gives 22 = 0.4(1 + g)/(0.085 - g), implying about 6.56%.

附录 A 公式速查

18 formula groups, with variable definitions and question links

不要只背公式：先判断分子分母对应谁、属于哪个期间、是否需要融资成本或终值折现。以下记号只在各公式块内使用；例如 L 在不同资料中可能代表贷款或杠杆，必须先看定义。

Do not memorize formulas alone: identify whose numerator and denominator are used, the relevant period, financing costs and terminal-value timing. Symbols are local to each block; for example, L may denote a loan or leverage in different materials, so read the definition.

A01 单期价格收益与总收益

One-period price and total returns

```
PR = (P1 - P0) / P0

TR = (P1 - P0 + D) / P0
```

P0 为期初价值；P1 为期末价值；D 为该期每股或同口径的收入。

P0 and P1 are beginning and ending values; D is income measured on the same basis.

防错：总收益加收入，价格收益不加；无分配时 TR=PR。

Check: Include income only in total return; without distributions, TR=PR.

对应原题 / Q: 24, 44, 138

A02 等权与一般加权收益

Equal-weighted and weighted returns

```
R_index = sum(w_i * R_i)

Equal weight: w_i = 1/N; R_index = sum(R_i)/N
```

w_i 为期初权重；R_i 为各证券同口径收益率；N 为成份数量。

w_i is the beginning weight; R_i is each security return; N is the constituent count.

防错：等权平均的是收益率，不是价格。Q17 需使用已说明的修复数据。

Check: Average returns, not prices. Q17 requires its explicitly reconstructed data.

对应原题 / Q: 17, 144

A03 价格加权指数

Price-weighted index

```
I_t = sum(P_i,t) / divisor_t

w_i = P_i / sum(P_i)

PR = I_1/I_0 - 1
```

P_i 为每股价格；divisor 为指数除数。除数不变时可用期末价格合计 / 期初价格合计 -1。

P_i is share price. With an unchanged divisor, use ending price sum divided by beginning price sum minus one.

防错：股数不参与价格加权；拆股需要调整除数，但仍会改变相对权重。

Check: Share count is irrelevant. A split requires a divisor adjustment and changes relative weights.

对应原题 / Q: 88, 146

A04 市值与自由流通市值权重

Market-cap and free-float weights

```
MV_i = P_i * N_i

w_i = MV_i / sum(MV_i)

w_float,i = (P_i*N_i*f_i) / sum(P_i*N_i*f_i)
```

N_i 为发行在外股数；f_i 为自由流通比例；权重不由指数点数决定。

N_i is shares outstanding and f_i is the free-float fraction; index level does not determine weights.

防错：控制性股东持股增加可降低自由流通比例，即使总股数不变。

Check: More controlling-shareholder ownership may reduce free float without changing total shares.

对应原题 / Q: 60, 71, 137

A05 多期复合收益

Compounded multi-period returns

```
I_T = I_0 * product(1 + R_t)

R_cumulative = product(1 + R_t) - 1
```

R_t 为每一期收益率；product 表示各期增长因子连乘。

R_t is each period return; product means multiplying the growth factors.

防错：连续各期收益不能直接相加；负收益也用 1+R_t。

Check: Do not add sequential returns; a negative return still enters as 1+R_t.

对应原题 / Q: 75

A06 保证金与杠杆

Margin and financial leverage

```
E = V - B

L = V/E = 1/m

m = E/V = 1/L
```

V 为持仓市值；B 为借款；E 为自有权益；m 为权益占市值比例。

V is position value, B is debt, E is investor equity, and m is equity divided by position value.

防错：分母是权益，不是借款；价格跌后必须重算 E 和 L。

Check: Leverage divides by equity, not debt; recompute equity and leverage after price changes.

对应原题 / Q: 115, 117, 119, 120

A07 维持保证金与追缴价格

Maintenance margin and margin-call price

```
B_per_share = P0*(1 - m_initial)

m(P) = (P - B_per_share)/P

P_call = B_per_share/(1 - m_maintenance)
```

借款金额固定、忽略利息及费用时使用；P 低于阈值会触发追缴。

Use when borrowing is fixed and interest and fees are ignored; a price below the threshold triggers the call.

防错：维持比例乘的是当前市值，不是买入价；初始保证金和维持保证金不同。

Check: Maintenance margin applies to current value, not purchase value; distinguish initial and maintenance margins.

对应原题 / Q: 123, 124

A08 融资后的期末权益与回报

Ending equity and leveraged holding-period return

```
E0 = q*P0/L; B = q*P0 - E0

E1 = q*P1 + D_total - B*(1+i*T) - costs

R_equity = (E1 - E0)/E0

If no dividends/fees: R_equity = L*R_asset - (L-1)*i*T
```

q 为股数，i 为借款年利率，T 为年数；这里用题目的一年单利借款口径。

q is shares, i is the annual borrowing rate, and T is years; the questions use one-year simple interest.

防错：利息按借款算，收益率按初始权益算；不能漏扣借款本金或利息。

Check: Interest is charged on debt, while the return denominator is initial equity. Deduct principal and interest.

对应原题 / Q: 130, 133, 136

A09 账面权益、市值与 ROE

Book equity, market equity, and ROE

```
Book equity = Total assets - Total liabilities

Market equity = Share price * Shares outstanding

ROE = Net income to common / Average common book equity
```

ROE 分子和分母应同属普通股；题目未列优先股时可使用其给定总权益。

Match common-shareholder earnings with common equity; use stated total equity where no preferred claim is specified.

防错：账面金额不是市场价格；期末权益与平均权益不要混用。

Check: Book values are not market prices; distinguish ending equity from average equity.

对应原题 / Q: 22, 90, 94, 103, 104

A10 股权自由现金流

Free cash flow to equity

```
FCFE = CFO - Fixed capital investment + Net borrowing

Net borrowing = New debt issued - Debt repaid

V_equity = sum[FCFE_t/(1+r)^t]
```

CFO 为经营现金流；固定资本投资通常用净资本开支；r 为股权必要回报率。

CFO is operating cash flow, fixed capital investment is net capital spending, and r is the required equity return.

防错：新增借款增加可供股东使用的现金；偿还本金则减少。折现终值也须计入。

Check: New borrowing adds cash available to equity; repayment reduces it. Include a terminal value where needed.

对应原题 / Q: 16, 61

A11 资产基础普通股估值

Asset-based common-equity valuation

```
V_common = FV_assets - FV_liabilities - FV_preferred

V_per_share = V_common / N

Adjusted assets = Book assets + sum(FV_item - BV_item)
```

FV 为公允 / 市场价值；BV 为账面价值；N 为普通股股数。

FV denotes fair or market value, BV book value, and N common shares outstanding.

防错：原总资产已含各资产，只加重估差额，不能再加一次整项价值。

Check: Assets are already included in total book assets; add only revaluation differences to avoid double counting.

对应原题 / Q: 34, 37, 102

A12 派息、留存与可持续增长

Payout, retention, and sustainable growth

```
p = DPS/EPS; b = 1 - p

g = b*ROE

D1 = D0*(1+g)
```

p 为派息率；b 为留存率；g 为稳定增长率；D0 为刚支付股息，D1 为下一期股息。

p is payout, b retention, g stable growth, D0 the current dividend, and D1 the next dividend.

防错：g 用留存率，不用派息率；稳定 ROE 及资本结构等假设需合理。

Check: Growth uses retention, not payout; stable profitability and financing assumptions must be reasonable.

对应原题 / Q: 21, 82, 122

A13 Gordon 增长模型与必要回报

Gordon growth model and required return

$$V_0 = \frac{D_1}{r-g} = \frac{D_0(1+g)}{r-g}$$

$$r = \frac{D_1}{P_0} + g$$

Required condition: $r > g$

r 为股权必要回报率；g 为永久稳定股息增长率；反推 r 时假定 P0 等于模型价值。

r is the required equity return and g perpetual dividend growth; inferring r assumes price equals model value.

防错：分子用 D1；r=g 或 r<g 不能使用该永续增长公式。

Check: Use D1 in the numerator; the perpetual-growth expression is invalid when r is not greater than g.

对应原题 / Q: 82, 112, 152, 154

A14 合理预期与历史市盈率

Justified forward and trailing P/E

$$\text{Forward P/E} = \frac{P_0}{E_1} = \frac{p}{r-g}$$

$$\text{Trailing P/E} = \frac{P_0}{E_0} = \frac{p(1+g)}{r-g}$$

$$g = r - \frac{p}{\text{Forward P/E}}$$

p 为派息率；E1 为预期下一期 EPS；E0 为历史 EPS；假定 EPS 与股息同速稳定增长。

p is payout, E1 forecast EPS, and E0 historical EPS; assume stable common growth in earnings and dividends.

防错：Q77 答案把未注明口径的 P/E 当 forward；不要对 trailing 公式漏乘 1+g。

Check: Q77 assumes a forward P/E although the stem is unspecific. Trailing P/E includes the 1+g factor.

对应原题 / Q: 1, 21, 36, 77, 106, 116, 122

A15 价格倍数与隐含价值

Price multiples and implied value

$$P/E = \frac{P}{EPS}; \quad P/B = \frac{P}{BVPS}$$

$$P/CF = \frac{P}{CFPS}; \quad P/S = \frac{P}{SPS}$$

$$\text{Implied price} = \text{Benchmark multiple} \times \text{Per-share fundamental}$$

BVPS、CFPS、SPS 分别为每股账面价值、现金流、销售额；比较必须统一口径。

BVPS, CFPS, and SPS are book value, cash flow, and sales per share; use comparable definitions.

防错：低倍数可能反映风险高或增长低；负历史 EPS 使常规 P/E 比较失去意义。

Check: A low multiple may reflect weaker growth or higher risk; negative historical EPS undermines ordinary P/E comparisons.

对应原题 / Q: 1, 51, 58, 128

A16 永续与定期优先股

Perpetual and finite-maturity preferred shares

Perpetual: V = D/r; D = Par*Dividend rate

Finite: V = D_period*[1-(1+y)^(-n)]/y + F/(1+y)^n

D_period = [V-F/(1+y)^n]*y/[1-(1+y)^(-n)]

F 为到期兑付额，y 为每期必要回报，n 为期数。Q142 用 y=7.2%/2、n=5*2。

F is redemption value, y the periodic required return, and n periods. Q142 uses y=7.2%/2 and n=5*2.

防错：有到期本金不可按永续估值；半年度现金流必须配半年度利率与期数。

Check: A maturity redemption rules out the perpetuity formula. Match payment frequency, discount rate, and periods.

对应原题 / Q: 114, 118, 142

A17 多阶段股息与终值时点

Multistage DDM and terminal-value timing

D_t = D0*(1+g_high)^t

V_n = D_(n+1)/(r-g_stable)

V0 = sum[t=1..n: D_t/(1+r)^t] + V_n/(1+r)^n

n 为高增长期末；稳定增长从第 n+1 期开始，D_(n+1)=D_n*(1+g_stable)。

n ends the high-growth phase; stable growth starts in period n+1, so D_(n+1)=D_n*(1+g_stable).

防错：题目若问年末 V_n，到此停止；问今日 V0 才折现。Q140 问第 3 年末价值。

Check: Stop at V_n if the question asks for that future date. Discount only for V0. Q140 asks for end-of-year-3 value.

对应原题 / Q: 93, 140

A18 企业价值与 EV 倍数

Enterprise value and EV multiples

EV = MV_common + MV_preferred + MV_debt - Cash_and_investments

EV/EBITDA = EV / EBITDA

MV 均指市场价值；减项为题目口径的现金、现金等价物与非经营投资。

MV denotes market value; subtract cash, cash equivalents, and non-operating investments under the stated convention.

防错：债务通常用市值，不自动用账面值；EV 对应全体资本提供者，不能当普通股市值。

Check: Use debt market value rather than automatically using book debt. EV is not common-equity market value.

对应原题 / Q: 52, 63, 98

附录 B 易混术语

30 contrasts to recognize quickly in an English stem

中文 / English	怎样区分 / Distinction
市场 / 账面 / 内在价值 Market / book / intrinsic value	成交价格对应市场价值；会计记录对应账面价值；估值模型给出内在价值估计。 Market value is observed in trading; book value comes from accounting; intrinsic value is an estimate.
股权价值 / 企业价值 Equity value / enterprise value	股权属于股东；EV 覆盖债权、普通股及优先股，并扣除相关现金投资。 Equity value belongs to shareholders; EV includes debt and equity claims and deducts relevant cash investments.
价格收益 / 总收益 Price return / total return	价格收益不含分配；总收益包括股息等收入及相应再投资。 Price return excludes distributions; total return includes income and its reinvestment.
等权 / 价格 / 市值加权 Equal / price / capitalization weighting	分别看 1/N、每股价格、股价乘股数；不要混淆高股价与大公司。 Weights depend on 1/N, share price, or price times shares. High-priced shares are not necessarily large firms.
再平衡 / 成份重构 Rebalancing / reconstitution	再平衡调整持仓权重；成份重构改变纳入哪些证券。 Rebalancing resets weights; reconstitution changes index membership.
历史 / 预期口径 Trailing / forward	Trailing 用已发生数据；forward 用预测数据，比较时必须一致。 Trailing uses realized data; forward uses forecasts. Compare like with like.
派息率 / 留存率 Payout / retention ratio	派息率 DPS/EPS；留存率 =1- 派息率；g 乘留存率。 Payout is DPS/EPS; retention is one minus payout. Growth uses retention.
股息收益率 / 派息率 Dividend yield / payout ratio	两者分子均为股息，前者除股价，后者除盈利。 Both use dividends; yield divides by price, while payout divides by earnings.
当前 / 下一期 / 稳定期首期股息 D0 / D1 / D_(n+1)	Gordon 分子是估值时点之后第一期股息，不是刚支付的股息。 Gordon uses the first dividend after the valuation date, not the dividend just paid.
经纪商 / 交易商 Broker / dealer	经纪商代客户安排交易；交易商以自身账户成为对手方并提供流动性。 Brokers act as agents; dealers trade for their own accounts and supply liquidity.
一级 / 二级市场 Primary / secondary market	一级市场发行人出售证券取得资金；二级市场资金在投资者之间流动。 Primary-market sales fund issuers; secondary-market trades transfer funds between investors.
订单 / 报价 / 经纪人市场 Order-driven / quote-driven / brokered	分别依靠订单簿撮合、交易商报价、经纪人寻找对手方。 They rely on order matching, dealer quotes, and brokers locating counterparties, respectively.
市价 / 限价 / 触发单 Market / limit / stop order	市价求立即成交；限价限制最差价格；stop 规定订单启动条件。 Market orders seek immediate execution; limits constrain price; stops specify activation conditions.
执行 / 有效性 / 清算指令 Execution / validity / clearing	依次回答怎样成交、何时有效、如何完成结算。 They specify how to execute, when the order is valid, and how to settle.
全部立即成交或取消 / 立即成交否则取消 FOK / IOC	标准 FOK 必须全部成交；IOC 允许部分成交并撤销余量。Q25 原解析混用。 Standard FOK requires a full fill; IOC permits a partial fill and cancels the remainder. Q25 conflates them.
初始 / 维持保证金 Initial / maintenance margin	初始保证金管建仓；维持保证金管建仓后的最低权益比例。 Initial margin governs opening the position; maintenance margin sets the minimum ongoing equity ratio.

中文 / English	怎样区分 / Distinction
多空持仓与方向敞口 Long / short position and exposure	卖出 put 是期权空头，却有标的多头方向敞口。 A written put is a short option position with long directional exposure to the underlying.
宣布 / 除息 / 登记 / 支付日 Declaration / ex / record / payment date	分别对应宣布股息、除去本次股息权、核对登记、实际付款；日期规则因市场而异。 These concern announcement, loss of dividend entitlement, shareholder registration, and payment; date rules vary by market.
股票股利 / 拆股 / 并股 Stock dividend / split / reverse split	前两项增加股数，并股减少股数；机械变化本身不创造股东财富。 The first two increase share count; a reverse split reduces it. Mechanical adjustments do not create wealth.
现金股利 / 回购 Cash dividend / repurchase	都是向股东返还现金；公平价格、无税费等假设下可比较财富等价。 Both return cash to shareholders; wealth equivalence requires fair pricing and other simplifying assumptions.
可赎回 / 可回售 Callable / putable	赎回权在发行人；回售权在投资者；后者通常对投资者更有利。 The issuer owns the call; the investor owns the put. The put generally protects the investor.
累积 / 非累积优先股 Cumulative / non-cumulative	累积股息欠付会累积；非累积遗漏股息通常不再补发。 Omitted cumulative dividends accrue; omitted non-cumulative dividends generally do not.
参与型 / 可转换优先股 Participating / convertible	参与型可分享额外分配；可转换型可按条款换成普通股。 Participating shares may share additional distributions; convertible shares may convert into common equity.
全球注册股份 / 存托凭证 GRS / depositary receipt	GRS 是跨市场交易的股份本身；DR 是代表外国股份权益的凭证。 A GRS is the share itself across markets; a DR represents an interest in foreign shares.
保荐 / 非保荐存托凭证 Sponsored / unsponsored DR	发行公司是否参与是核心差异；投票安排不同，两者均可能有汇率风险。 Issuer involvement is the key distinction; voting arrangements differ, and both can carry currency exposure.
弱式 / 半强式 / 强式效率 Weak / semi-strong / strong efficiency	信息集合依次为历史交易资料、全部公开信息、公开加私人信息。 The information sets are historical trading data, all public information, and public plus private information.
风险厌恶 / 损失厌恶 / 保守性偏差 Risk aversion / loss aversion / conservatism	风险厌恶可为理性偏好；损失厌恶重视损失；保守性偏差是更新信息不足。 Risk aversion can be rational; loss aversion overweights losses; conservatism under-updates beliefs.
价值 / 规模 / 动量效应 Value / size / momentum effect	分别比较价值与成长、小盘与大盘，以及过去赢家后续表现。 They concern value versus growth, small versus large firms, and persistence in past winners' performance.
自上而下 / 自下而上预测 Top-down / bottom-up forecast	市场规模×份额是 top-down；经营单位数量×单位收入是 bottom-up。 Market size times share is top-down; operating units times revenue per unit is bottom-up.
维持性 / 增长性资本开支 Maintenance / growth capex	前者维持现有产能，可参考折旧；后者扩张产能，应看扩张计划。 Maintenance preserves capacity and may use depreciation as a proxy; growth capex follows expansion plans.

附录 C 原稿勘误与条件说明

Keep the original answer separate from the verified interpretation

前四类严重问题已在相应题目中保留原题并解释；其他条目是答案符号、拼写、旁注或适用条件的修正。没有为补齐缺损而杜撰新题或新选项。

The four major source issues retain the original questions and are explained in place. Other entries correct signs, typos, side explanations or application conditions. No new questions or answer choices have been invented to fill gaps.

Q002 | 原答案 / Source answer A | 讲解页 / Guide p.59

原答案的“登记日只能是工作日”表述与 SEC Investor.gov
现行说明不符；本题应标记为规则背景不足，避免纳入无争议正确率统计。

The source statement that record dates occur only on business days conflicts with SEC Investor.gov guidance. Flag the item as context-dependent and exclude it from unambiguous scoring.

核验来源 / Verification: W3

Q012 | 原答案 / Source answer A | 讲解页 / Guide p.8

经原题页面与答案页双重核对，题干和选项 / 解析错配。原答案 A
仅适用于“何者是资金来源”的另一题；未擅自补造原题选项。

The source stem is mismatched with its options and solution. Source answer A belongs to a capital-source question. No replacement answer choices have been invented.

Q017 | 原答案 / Source answer B | 讲解页 / Guide p.31

原题表格第三行与答案页不一致：原题按期末 €0 字面计算得到 -20%，没有匹配选项。本讲义明确采用答案页的 €21 作示例重建，并保留原始问题说明。

The original third row conflicts with the solution. Taking the displayed €0 ending price literally gives -20%, which matches no option. The worked example explicitly uses the solution’s reconstructed €21.

Q025 | 原答案 / Source answer B | 讲解页 / Guide p.14

原答案把 FOK 按 IOC 处理并注明某些市场使用该称呼，因此给
B。本讲义同时保留其预期答案与标准术语区别，避免把部分成交当成标准 FOK 规则。

The source treats FOK as IOC and notes that terminology can differ across markets. B is its intended result, but partial execution is inconsistent with the standard FOK definition.

核验来源 / Verification: W1, W2

Q018 | 原答案 / Source answer C | 讲解页 / Guide p.13

原答案对 A 的文字解释不够准确：€47.70 卖单可以与现有 €47.85 买价成交；这不影响正确选项 C。

The source explanation of A is imprecise: a €47.70 sell limit is marketable against the €47.85 bid. The correct option remains C.

Q035 | 原答案 / Source answer C | 讲解页 / Guide p.82

原题把“年末支付”作为年度 DDM 的默认约定；并非 DDM 只能处理年度股息。

Year-end payment is the annual-model convention in this item, not a restriction on all DDM applications.

Q040 | 原答案 / Source answer A | 讲解页 / Guide p.40

A 是原题预期答案；严格表述应注明相关信息集合，弱式、半强式和强式效率所覆盖的信息不同。

A is the intended answer. More precisely, efficiency is defined relative to an information set, which differs across weak, semi-strong, and strong forms.

Q044 | 原答案 / Source answer A | 讲解页 / Guide p.28

原题省略了存在收入分配的条件。答案 A 应按有股息等分配的通常情形理解，不能与 Q24 的无分配例外混淆。

The question omits the positive-distribution assumption. A applies to the usual income-paying case; Q24 states the no-distribution exception.

Q057 | 原答案 / Source answer C | 讲解页 / Guide p.57

原答案提到除息日比登记日早一至两个工作日；这不是可跨市场、跨时期照搬的固定规则。本题答案 C 不受该细节影响。

The source describes a one- or two-business-day gap before the record date. That is not a universal rule across markets and settlement regimes; the answer C does not depend on that detail.

核验来源 / Verification: W3

Q064 | 原答案 / Source answer C | 讲解页 / Guide p.36

原答案将对冲基金概括为“不受监管实体”。学习时不宜把这当作所有司法管辖区的绝对法律事实；本题真正考点是数据库覆盖差异与报告偏差。

The source broadly labels hedge funds unregulated. Do not treat that as an absolute legal statement across jurisdictions; the tested point is database coverage and reporting bias.

Q077 | 原答案 / Source answer B | 讲解页 / Guide p.98

原题只写 P/E，没有说明 forward 或 trailing；原答案明确按 forward P/E 处理。若按 trailing P/E，方程应为 22=0.4(1+g)/(0.085-g)，得到 g 约 6.56%，公式不同。

The stem does not label P/E as forward or trailing; the supplied solution explicitly assumes forward P/E. A trailing P/E instead gives 22 = 0.4(1 + g)/(0.085 - g), implying about 6.56%.

Q084 | 原答案 / Source answer A | 讲解页 / Guide p.71

原答案引用的是 2009 年的分类数量，不能直接作为现行数量记忆；本题只保留不依赖这些旧数量的层级关系。

The source quotes category counts from 2009. Those figures should not be memorized as current counts; the hierarchy answers the question without them.

Q109 | 原答案 / Source answer C | 讲解页 / Guide p.45

原答案 B 的解释把 earnings surprise
本身称为异象，表述过宽。意外消息导致价格及时调整符合有效市场；持续漂移或不恰当反应才可能构成异象。

The source overstates matters by calling an earnings surprise itself an anomaly. Prompt repricing on unexpected news is consistent with efficiency; drift or inappropriate reaction may indicate an anomaly.

Q128 | 原答案 / Source answer A | 讲解页 / Guide p.92

已目视核对原题：B 印为 P/F，C 印为 P/CE；表格和答案说明对应
P/E、P/CF。本讲义中文按明确语义校正，保留原题英文以便追溯。

Visual inspection confirms source option typos: B says P/F and C says P/CE. The table and solution identify the intended measures as P/E and P/CF. The Chinese translation corrects these while the original English remains traceable.

Q136 | 原答案 / Source answer A | 讲解页 / Guide p.22

原答案选择 A 正确，但最后一行把 -5,625 / 12,500 写为 45%，漏了负号。应为 -45%。

The source correctly selects A but omits the minus sign in its final calculation. -5,625 / 12,500 equals -45%, not +45%.

Q137 | 原答案 / Source answer C | 讲解页 / Guide p.24

原答案 B 的旁注把 $30 / 指数点位 100 称为价格加权权重，不严谨。价格加权权重应为 Pi / ΣPj；指数点位还含除数调整。

The source's explanation of B incorrectly treats $30 divided by the index level as a price-weighted weight. The correct weight is Pi / ΣPj; the index level also reflects its divisor.

Q144 | 原答案 / Source answer B | 讲解页 / Guide p.30

原答案对 C 的解释误复制了忽略股息的 A。C = 6% 的实际错误是忘了等权平均；正确答案 B 不变。

The source repeats the explanation for A when discussing C. C = 6% actually results from failing to average the equally weighted returns. B remains correct.

附录 D 154 题答案与页码索引

Original numbering · concept-unit mapping · source answer · guide page

星号 * 表示 40 道 CORE 题。感叹号!表示原稿有实质问题，答案栏只保留原文件字母，不代表无条件认可；详见对应页。其余附条件或文字修正在勘误表中说明。点击题号可跳转。

An asterisk * marks a CORE question. An exclamation ! marks a materially defective source item: its letter is the supplied answer, not an unqualified endorsement. Other caveats appear in the errata. Click a question number to jump.

评分建议：排除 Q2、Q12、Q17、Q25，剩余 150 题作为原稿修正后的练习基础；Q17
若采用答案页重建数据，可单独练习，不与未修复原题混合计分。

For practice scoring, exclude Q2, Q12, Q17 and Q25, leaving 150 items with the stated corrections and assumptions. Q17 may be practiced using explicitly reconstructed data, but should not be mixed with the unrepaired item when scoring.

来源与编制说明

Source traceability and editorial method

S1 1000 题 (2).pdf

股权投资部分，PDF 第 41-68 页，章节印刷页 1-28，原题 Q1-Q154。 / Equity section, PDF pp.41-68, printed pp.1-28, Q1-Q154.

S2 股权投资 (1).pdf

PDF 第 1-154 页，每页对应同号题的原答案。原文件为答案图片；本讲义以文字识别并结合原图核对。 / PDF pp.1-154, one source solution per matching question number; image-based pages checked through OCR and source visuals.

W1 SEC Investor.gov - Fill-Or-Kill Order

用于核实第 25 题 FOK 必须立即全部成交的定义。 / Verifies immediate execution in full for FOK in Q25.

https://www.investor.gov/introduction-investing/investing-basics/glossary/fill-or-kill-order

W2 SEC Investor.gov - Immediate-Or-Cancel Order

用于核实第 25 题 IOC 可以部分成交，其余取消。 / Verifies partial execution and cancellation of the remainder for IOC in Q25.

https://www.investor.gov/introduction-investing/investing-basics/glossary/immediate-or-cancel-order

W3 SEC Investor.gov - Ex-Dividend Dates

用于核实第 2、57、108 题日期口径；明确存在非工作日登记日，除息安排依规则确定。核验日期 2026-11-02。 / Clarifies Q2, Q57 and Q108 date conventions, including non-business-day record dates. Checked 2026-11-02.

https://www.investor.gov/introduction-investing/investing-basics/glossary/ex-dividend-dates-when-are-you-entitled-stock-and

题目英文保留原始实质内容，规范换行并重建 26 张表格。中文为辅助理解的翻译；解释按知识点重写并逐题对应原答案。Q128 等明确错字只在中文与核验说明中纠正，英文仍可追溯到原稿。

Original English substance is preserved, with normalized line breaks and 26 reconstructed tables. Chinese translations support understanding; explanations are rewritten by concept and matched to each source answer. Clear typos such as Q128 are corrected in Chinese and the source-check notes while the original English remains traceable.

每题来源行中的 S1 页码是第一份 PDF 的实际文件页码，章节页为原股权投资部分底部印刷页码；S2 页码是第二份 PDF 答案页。讲义页码则见页脚与附录 D，三种页码不混用。

Each source line gives S1’s actual PDF page, the printed equity-section page, and S2’s answer page. Guide page numbers appear in the footer and Appendix D. These page-number systems are kept distinct.

本资料专为快速学习这 154 道上传题目编排。知识点频次、CORE 标记和章节顺序均为学习安排，不代表 CFA Institute 的命题频率、题源认证或考试覆盖保证。

This guide is organized to learn the 154 uploaded questions efficiently. Topic counts, CORE labels and ordering are study choices, not CFA Institute exam-frequency claims, source certification or guarantees of exam coverage.
