CFA LEVEL I | ECONOMICS

# 经济学
# 中英对照速学与原题全解

## Learn the concepts.
## Work through every original question.

| | | |
|---|---|---|
| 76 道原题<br>76 original questions | 8 个学习单元<br>8 topic-based units | 逐题匹配答案<br>Answers matched one by one |

先学知识点，再做原题；每题保留英文题干和选项，并配中文翻译、双语解析、计算步骤及易错点。

Learn each unit's concepts first, then apply them to the original questions. Every item retains its English stem and choices, with a Chinese translation, bilingual explanation, calculations where needed, and a common-trap reminder.

题源：1000题(7).pdf，第91-103页。答源：经济学(2).pdf，第1-76页。原题编号1-76完整保留。

Question source: 1000题(7).pdf, PDF pages 91-103. Answer source: 经济学(2).pdf, PDF pages 1-76. Original question numbers 1-76 are retained.

资料年份与来源性质未标明：不能据此确认教材年份，也不将这些题标为官方原题或某年模考题。本书8单元为按考点重组的学习分类。

The files do not establish a curriculum year or verified provenance. These questions are not relabeled as official questions or a particular year's mock. The eight units are editorial groupings by topic.

整理日期：2026年11月2日。重点疑题已标注，原答案与编者复核分开呈现。

Prepared 2 November 2026. Source issues are flagged, with original answers separated from editorial review.

# 怎样最快学会这76题

## How to Learn These 76 Questions Efficiently

建议先用90分钟建立框架，再完成全部76题。下面是第一轮学习预算，不是读完整本讲义的承诺；你已熟悉的单元可直接从例题开始。

Use an initial 90-minute pass to establish the framework, then complete all 76 questions. This is a first-pass time budget, not a promise to finish the entire guide; begin with the examples in units you already know.

| 顺序与时间<br>Order and minutes | 先抓住的知识点<br>First-pass focus | 先做原题<br>Start with these originals |
|---|---|---|
| 1 \| 20分钟 / 20 min | 财政与货币：工具、方向、稳定器、利率下限<br>Fiscal vs monetary: tools, stance, stabilizers, lower bound | Q1, Q16, Q23, Q33, Q67 |
| 2 \| 20分钟 / 20 min | 汇率：单位消去、利率放置、点数换算<br>FX: unit cancellation, rate placement, forward points | Q4, Q40, Q41, Q54, Q63 |
| 3 \| 15分钟 / 15 min | 市场结构：定价权、停产退出、正常利润<br>Market structure: pricing, shutdown/exit, normal profit | Q2, Q28, Q42, Q53, Q68 |
| 4 \| 10分钟 / 10 min | 周期指标：领先、同步、滞后<br>Cycle indicators: leading, coincident, lagging | Q7, Q32, Q39 |
| 5 \| 10分钟 / 10 min | 贸易：补贴关税、机构、储蓄恒等式<br>Trade: subsidies/tariffs, institutions, saving identity | Q29, Q48, Q61, Q65 |
| 6 \| 10分钟 / 10 min | 地缘政治：合作类型、国家行为、风险<br>Geopolitics: cooperation, archetypes, risks | Q9, Q66, Q73, Q74 |
| 7 \| 5分钟 / 5 min | 核对资料疑点，写出自己的错误原因<br>Review source issues and record your error causes | Q45, Q49, Q50, Q62 |

每题固定三步：先独立选答案；再用一句话解释正确项并排除另外两项；最后给错题贴标签（定义、方向、公式、审题或资料疑点）。24小时后只重做错题与猜对题。

For each question: choose independently; explain the correct choice and reject the other two in one sentence; then tag any error as definition, direction, formula, reading, or source ambiguity. After 24 hours, repeat only incorrect or guessed items.

资料疑点题不计入概念掌握率：第45题方向冲突，第49题缺少报价口径，第50题缺少集中度定义，第62题选项缺词。先学原理，再单独核对这些题。

Exclude source-issue items from a clean concept-mastery score: Q45 has a direction conflict, Q49 omits the quote convention, Q50 omits the concentration-ratio definition, and Q62 has an incomplete choice. Learn the principles and review these items separately.

| 07 汇率制度与汇率的含义<br>Exchange Rate Regimes and Exchange Rate Concepts | 5 | 6, 34, 43, 52, 71 |
| 08 汇率计算：交叉、远期与实际汇率<br>Exchange Rate Calculations: Cross Rates, Forwards, and Real Rates | 9 | 4, 18, 40, 41, 45, 46, 49, 54, 63 |

本讲义不扩写题库中不存在的考点题，也不把这76题视为完整考纲覆盖。学完后重点检查：能否说清定义、判断方向、解释错误选项，以及在不看答案时复现计算。

This guide does not invent additional questions or claim that the 76 items cover an entire curriculum. After studying, check that you can state the definition, judge the direction, explain the distractors, and reproduce calculations without the key.

# 考前核心规则速查

## Core Rules for a Fast Review

01 财政看税收和政府支出；货币看央行、利率、流动性与信贷。

Fiscal policy concerns taxes and government spending; monetary policy concerns central banks, rates, liquidity, and credit. [Q1, Q3, Q15, Q58]

02 衰退令税收自动下降，是自动稳定器；新增项目或修改税率才是主动政策决策。

Tax receipts falling automatically in a recession are an automatic stabilizer; new projects or rate changes are discretionary decisions. [Q23, Q25]

03 短期收入低于可变成本才停产；收入能盖住可变成本但盖不住总成本，则短期做、长期退。

Shut down if short-run revenue is below variable cost. If revenue covers variable but not total cost, operate short term and exit long term. [Q53, Q68]

04 完全竞争长期零经济利润仍包含正常回报；产品差异化是垄断竞争的关键。

Zero long-run economic profit under perfect competition includes a normal return; differentiation is central to monopolistic competition. [Q2, Q42]

05 工时领先，就业人数同步，失业持续时间滞后；不要把招聘减速当成全面停止招聘。

Hours lead, employment is coincident, and unemployment duration lags; slower hiring does not mean all hiring stops. [Q31, Q39]

06 央行作为回购中的现金贷款人会注入流动性；卖出债券通常回收流动性。

A central bank lending cash through a repo injects liquidity; selling bonds generally withdraws liquidity. [Q33, Q64]

07 先写外汇报价单位。利率在远期公式中的位置，取决于该币种在报价的分子还是分母。

Write FX quote units first. A currency's position in the forward-rate formula follows its position in the quotation. [Q4, Q49]

08 关税和出口补贴可能保护生产者，但小国的整体福利通常受损。

Tariffs and export subsidies may protect producers while generally reducing a small country's national welfare. [Q29, Q51]

09 IMF重国际货币与支付体系；世界银行重减贫与发展；WTO重国际贸易规则。

The IMF concerns the monetary and payments system; the World Bank concerns poverty reduction and development; the WTO concerns trade rules. [Q20, Q61]

10 原答案可以核对，但题干缺失或定义不清时要保留疑点；不要靠背字母掩盖概念冲突。

An answer key can be matched, but missing text and unclear definitions must remain flagged; memorizing letters does not resolve conceptual conflicts. [Q45, Q49, Q50, Q62]

# 公式速查与使用条件

## Formula Sheet and Conditions

### 长期保本产量 / Long-run break-even quantity

$$Q = TFC / (P - AVC)$$

售价与单位可变成本不变；P大于AVC。TFC为总固定成本。

Assume constant selling price and variable cost per unit, with P>AVC. TFC is total fixed cost. [Q28]

### 短期与长期决策 / Short-run and long-run decisions

$$TR < TVC: \text{shut down}; TVC < TR < TC: \text{operate short run, exit long run}$$

TR为总收入，TVC为总可变成本，TC为总成本；固定成本已承诺的标准模型。

TR is total revenue, TVC total variable cost, and TC total cost; use the standard model with committed fixed costs. [Q53, Q68]

### 市场集中度 / Market concentration

$$CR_N = \text{sum of top N shares}; HHI = \text{sum}(s_i^2)$$

份额用小数时垄断HHI=1；用百分数时HHI=10,000。CR_N=100%须先看N。

Monopoly HHI is 1 with decimal shares or 10,000 with percentage shares. Interpret CR_N=100% only after identifying N. [Q50, Q76]

### 中性政策利率 / Neutral policy rate

$$i_{neutral} \approx \text{real trend growth} + \text{expected inflation}$$

本题库的简化近似；紧缩要求i_policy>i_neutral。

This set uses a simplifying approximation; contraction requires i_policy>i_neutral. [Q56, Q67]

### 储蓄、财政与净出口 / Saving, fiscal balance, and net exports

$$X - M = (S_{private} - I) + (T - G)$$

本题简化国民收入恒等式，忽略净要素收入及跨境转移等差异；T按一致的净税收口径。

Simplified national-income identity, abstracting from net factor income and cross-border transfers; use a consistent net-tax definition for T. [Q65]

### 交叉汇率及变化 / Cross rate and percentage change

$$EUR/GBP = (USD/GBP) / (USD/EUR); \text{change} = S_{end} / S_{start} - 1$$

先约掉共同货币，再算新值/旧值；不要混入倒数报价。

Cancel the common currency, then use new/old; do not mix reciprocal quotations. [Q40, Q41]

### 覆盖利率平价 / Covered interest rate parity

$$F(P/B) = S(P/B) \times (1 + r_P \times T) / (1 + r_B \times T)$$

P为报价货币、B为基础货币；T以年计并与单利报价相容。假设覆盖套利、同期限利率及无摩擦。

P is price currency and B base currency; T is in years and consistent with simple-rate quotes. Assume covered arbitrage, matching tenors, and no frictions. [Q4, Q18, Q49]

### 四位小数的远期点数 / Forward points for a four-decimal quote

$$\text{Points} = (F - S) \times 10{,}000; F = S + \text{Points} / 10{,}000$$

适用于原题54、63的报价惯例，不能无条件推广到所有货币。

Use the convention in Q54 and Q63, rather than applying this scale to every currency. [Q54, Q63]

### 实际汇率与通胀调整 / Real exchange rate and inflation adjustment

$$q(P/B) = S(P/B) \times CPI_B / CPI_P$$

q变化因子=(S_1/S_0)×(1+inflation_B)/(1+inflation_P)。升值方向必须与报价一致；第45题单列疑点。

The q-change factor is (S_1/S_0)×(1+inflation_B)/(1+inflation_P). Keep appreciation consistent with the quote; Q45 is separately flagged. [Q45, Q46, Q71]

# 01 企业与市场结构

## Firms and Market Structures

14道原题 / 14 original questions: Q2, Q21, Q24, Q26, Q28, Q30, Q42, Q47, Q50, Q53, Q55, Q57, Q68, Q76

## 先学知识点 / Learn the concepts first

### 01 四种结构：先看企业数量、产品差异和进入壁垒

Four structures: firms, differentiation, and entry barriers

完全竞争：企业多、产品同质、进入壁垒低，单个企业接受市场价格。垄断竞争：企业多但产品有差异，具有有限定价权。寡头：少数主要企业、进入壁垒高，必须考虑对手反应。垄断：单一卖方且缺少良好替代品，定价权通常最强。第21题没有完全竞争选项，因此在给定选项中选垄断竞争。

Perfect competition has many firms, homogeneous products, low entry barriers, and price-taking firms. Monopolistic competition has many firms and differentiated products, giving each limited pricing power. Oligopoly has a few major firms, high barriers, and strategic interdependence. Monopoly has one seller and no close substitutes, usually giving the greatest pricing power. Q21 does not offer perfect competition, so monopolistic competition is the best available choice.

对应原题 / Related originals: Q2, Q21, Q47, Q55

### 02 正常利润与零经济利润

Normal profit and zero economic profit

经济利润已经扣除显性成本与机会成本，包括投资者要求的正常回报。完全竞争长期均衡中的零经济利润，并不是零会计利润，也不意味着企业必然倒闭。超额经济利润吸引进入，经济亏损促使退出，直到留下的企业赚取正常回报。

Economic profit deducts explicit costs and opportunity costs, including investors' required normal return. Zero economic profit in long-run competitive equilibrium is therefore not zero accounting profit or inevitable business failure. Positive economic profit attracts entry; economic losses induce exit until remaining firms earn a normal return.

Economic profit = Total revenue - Explicit costs - Opportunity costs

对应原题 / Related originals: Q42, Q57

### 03 短期停产看可变成本，长期退出看总成本

Short-run shutdown uses variable cost; long-run exit uses total cost

在本题组的标准短期模型中，固定成本已经发生；只要收入能覆盖可变成本，继续生产仍能分担固定成本。TR<TVC 时停产；TVC<TR<TC 时短期继续、长期退出；长期至少需要覆盖全部经济成本。第28题假设售价与单位可变成本不变，保本产量等于固定成本除以单位贡献毛利。

In the standard short-run model used here, fixed costs are already committed. Producing is worthwhile if revenue covers variable cost and contributes toward fixed cost. Shut down when TR<TVC; if TVC<TR<TC, operate in the short run but exit in the long run. Long-run viability requires covering all economic costs. With constant price and variable cost per unit, Q28's break-even quantity equals fixed cost divided by contribution margin per unit.

Q_break-even = TFC / (P - AVC); TC = TFC + TVC

对应原题 / Related originals: Q28, Q53, Q68

## 04 为什么只有价格接受者有通常意义上的供给曲线

Why the usual supply curve belongs to a price taker

完全竞争企业按 P=MR=MC 选择产量，其短期供给曲线是高于最低平均可变成本的向上倾斜边际成本部分；长期对应高于最低长期平均成本的长期边际成本部分。垄断竞争企业面对向下倾斜的需求，先按 MR=MC 决定产量，再从需求曲线读价格；需求变化会改变价格与产量关系，因此不存在独立于需求的唯一供给曲线。

A competitive firm chooses output where P=MR=MC. Its short-run supply is the upward-sloping part of marginal cost above minimum average variable cost; its long-run supply is the relevant long-run marginal-cost portion above minimum long-run average cost. A monopolistically competitive firm selects output at MR=MC and reads price from demand. Because demand changes the price-output relationship, it has no unique supply curve independent of demand.

Perfect competition: P = MR = MC; Imperfect competition: choose Q where MR = MC

对应原题 / Related originals: Q30, Q57

## 05 寡头：战略相互依赖与古诺假设

Oligopoly: strategic interdependence and the Cournot assumption

寡头企业改变价格或产量时要预判其他企业的反应。古诺模型以产量为决策变量：每家企业优化自己的产量时，把其他企业的产量视为既定。勾结模型则把企业作为共同制定行业产量或价格的集团；第24题按答案资料的口径，将行业总需求分配给成员，区别于非勾结情形中的企业个别需求。

An oligopolist considers rivals' responses when changing price or output. Cournot competition uses output as the decision variable: each firm optimizes its own output while treating rivals' output as fixed. A collusive model treats firms as a group setting industry price or output. For Q24, the supplied solution distinguishes allocation of aggregate market demand under collusion from individual firm demand under non-collusion.

对应原题 / Related originals: Q24, Q26, Q55

## 06 市场集中度：CR 与 HHI

Market concentration: CR and HHI

CR_N 是最大 N 家企业市场份额之和；HHI 把各企业市场份额先平方再相加，因而对大企业给予更大权重。用小数份额计算，单一垄断 HHI=1；用百分数计算则为10,000。M家同样大小的企业对应 HHI=1/M。集中度不直接反映潜在进入威胁或需求弹性。注意：一般 CR_N=100% 不能证明单一垄断；第50题原答案的表述需要这个限定。

CR_N sums the market shares of the largest N firms. HHI sums squared market shares and therefore gives greater weight to large firms. A monopolist has HHI=1 using decimal shares, or 10,000 using percentage shares. M equal-sized firms have HHI=1/M. Concentration measures do not directly capture potential entry or demand elasticity. A general CR_N of 100% does not prove a single-firm monopoly; Q50's supplied explanation needs this qualification.

CR_N = s_1 + ... + s_N; HHI = sum(s_i^2); Equal-sized firms: HHI = 1/M

对应原题 / Related originals: Q50, Q76

## 考场触发词 / Exam triggers

做题顺序：先辨市场结构，再看时间范围。停产题圈出 short run / long run；定价题确认是否为价格接受者；集中度题确认份额用小数还是百分数。

Identify market structure first, then the time horizon. Highlight short run versus long run in shutdown questions, establish whether the firm is a price taker, and check whether concentration shares use decimals or percentages.

# 用原题检验理解 / Apply the concepts to the originals

## Q02 产品差异化

Product differentiation

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.2

Under which of the following market structures is product differentiation most important?

在以下哪一种市场结构中，产品差异化最重要？

| | | |
|---|---|---|
| A. | Monopoly. | 垄断。 |
| B. | Perfect competition. | 完全竞争。 |
| C. | Monopolistic competition. | 垄断竞争。 |

原答案 / Supplied answer: C

解析：垄断竞争有许多相互竞争的企业，但品牌、品质或服务差异使各企业拥有有限定价权，因此差异化是核心。完全竞争的产品同质，不能依靠差异化定价；纯粹垄断只有一个卖方，其市场力量主要来自缺少替代品和进入壁垒。

Explanation: Monopolistic competition combines many competing firms with differentiated products. Differences in brand, quality, or service create limited pricing power, making differentiation central. Perfect competition assumes homogeneous products. A pure monopoly has one seller, with market power arising mainly from a lack of close substitutes and barriers to entry.

易错点：不要把 monopolistic competition（垄断竞争）误读为 monopoly（垄断）。

Common trap: Do not confuse monopolistic competition with monopoly.

## Q21 相对定价权

Relative pricing power

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.21

Under which of the following market structures do firms have the least control over price?

在以下哪一种市场结构中，企业对价格的控制最少？

| | | |
|---|---|---|
| A. | Oligopoly. | 寡头。 |
| B. | Monopoly. | 垄断。 |
| C. | Monopolistic competition. | 垄断竞争。 |

原答案 / Supplied answer: C

解析：给定三个选项中，垄断竞争的企业数量较多且替代品较多，定价权最弱。寡头和垄断通常具有较高进入壁垒及较强市场力量。完全竞争的定价权更低，但它不在本题选项内。

Explanation: Among the three choices, monopolistic competition has more firms and more substitutes, giving the least pricing power. Oligopoly and monopoly generally have stronger barriers and greater market power. Perfect competition would have even less pricing power, but it is not an offered choice.

易错点：回答给定选项中的最优答案，不能自行添加"完全竞争"选项。

Common trap: Choose the best offered answer; do not add perfect competition as a new option.

## Q47 进入壁垒

Barriers to entry

题源 Q / PDF p.98（经济学 p.8）| 答源 A / PDF p.47

Which of the following market structures has high barriers to entry?

以下哪一种市场结构具有较高的进入壁垒？

| | | |
|---|---|---|
| A. | An oligopoly. | 寡头。 |
| B. | Perfect competition. | 完全竞争。 |
| C. | Monopolistic competition. | 垄断竞争。 |

### 原答案 / Supplied answer: A

解析：寡头市场通常由少数主要企业控制，高进入壁垒有助于维持其地位。完全竞争与垄断竞争的标准模型都以较低进入壁垒为特征。垄断也可能具有高壁垒，但不在本题选项中。

Explanation: Oligopoly is dominated by a few major firms, whose position is supported by substantial entry barriers. Standard models of perfect and monopolistic competition have relatively low barriers. Monopoly can also have high barriers, but it is not offered here.

易错点：产品有差异不代表一定存在高进入壁垒。

Common trap: Product differentiation does not necessarily imply high entry barriers.

## Q55 战略相互依赖

Strategic interdependence

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.55

Under which of the following market structures are pricing strategies most likely influenced by the expected reaction of other firms?

在以下哪一种市场结构中，企业的定价策略最可能受到其他企业预期反应的影响？

| | | |
|---|---|---|
| A. | Oligopoly | 寡头。 |
| B. | Perfect competition | 完全竞争。 |
| C. | Monopolistic competition | 垄断竞争。 |

### 原答案 / Supplied answer: A

解析：寡头企业数量较少，一家的降价或增产会明显影响其他企业，因此必须预判对手回应。完全竞争企业接受市场价格；垄断竞争企业众多，单个竞争者的反应通常没有寡头模型中那么重要。

Explanation: With few major firms, an oligopolist's price or output change materially affects rivals, making anticipated responses central to strategy. A perfectly competitive firm takes the market price. Monopolistic competition has many firms, so a particular rival's response is generally less central than in oligopoly.

易错点：题干出现"对手反应""报复性降价""战略互动"，优先想到寡头。

Common trap: Rival responses, retaliatory pricing, and strategic interaction point toward oligopoly.

## Q42 正常回报与长期均衡

Normal return and long-run equilibrium

题源 Q / PDF p.97（经济学 p.7）| 答源 A / PDF p.42

A perfectly competitive market structure:

完全竞争的市场结构：

| | | |
|---|---|---|
| A. | is not possible in reality. | 在现实中不可能存在。 |
| B. | causes all industries to ultimately fail due to lack of profits. | 由于缺乏利润，最终会导致所有行业衰败。 |
| C. | drives company profits to the investors' required rate of return. | 使企业利润趋向投资者要求的回报水平。 |

原答案 / Supplied answer: C

解析：自由进入与退出使完全竞争企业的长期超额经济利润趋向零，但企业仍获得包含机会成本在内的正常回报，因此选C。部分同质商品市场可近似完全竞争，A过于绝对。零经济利润并非零会计利润，B把正常经营误解为必然失败。

Explanation: Entry and exit drive long-run excess economic profit toward zero while firms still earn a normal return covering opportunity costs. Some homogeneous commodity markets approximate perfect competition, making A too absolute. Zero economic profit is not zero accounting profit, so B incorrectly equates normal operation with failure.

易错点：零经济利润已经包括投资者要求的正常回报。

Common trap: Zero economic profit already includes investors' required normal return.

## Q57 完全竞争企业的长期供给

Long-run supply of a competitive firm

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.57

In long-run equilibrium, the perfectly competitive firm's supply curve is best represented by the firm's long-run:

在长期均衡中，完全竞争企业的供给曲线最适合由该企业长期的哪一条曲线表示？

| | | |
|---|---|---|
| A. | marginal cost schedule. | 边际成本曲线。 |
| B. | average revenue schedule. | 平均收益曲线。 |
| C. | marginal revenue schedule. | 边际收益曲线。 |

### 原答案 / Supplied answer: A

解析：企业接受价格，并按P=MC选择产量，所以长期供给由长期边际成本曲线的相关部分表示，长期经营还要求覆盖平均成本。平均收益与边际收益对单个完全竞争企业等于市场价格，描述收入条件而不是成本决定的供给关系。

Explanation: A price-taking firm selects output where P=MC, so its long-run supply is the relevant portion of its long-run marginal-cost curve, subject to covering average cost. Average and marginal revenue equal market price for the firm; they describe revenue conditions rather than the cost-based supply relationship.

P = MR = MC; long-run operation requires P >= LRAC

易错点：并非整条MC曲线都代表供给；要满足向上倾斜及长期成本覆盖条件。

Common trap: Not every part of the MC curve is supply; the relevant portion must satisfy slope and long-run cost-coverage conditions.

原资料核对 / **Source review**

原答案页末的学习目标误写为“垄断竞争”；本题题干与解析均讨论完全竞争，故依题干归类。

The learning-outcome label at the bottom of the source answer page incorrectly says monopolistic competition. Both the question and explanation concern perfect competition, so classification follows the question.

## Q28 长期保本产量

Long-run break-even quantity

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.28

An analyst gathers the following information about a company

| | |
|---|---|
| Average variable cost per unit | $12.50 |
| Selling price per unit | $37.50 |
| Total fixed costs | $900,000 |

The minimum production level needed to continue operations over the long run is most likely.

分析师收集到某公司的以下资料：单位平均可变成本为12.50美元，单位售价为37.50美元，总固定成本为900,000美元。为了在长期继续经营，所需的最低产量最可能是多少？

| | | |
|---|---|---|
| A. | 24,000 units. | 24,000单位。 |
| B. | 36,000 units. | 36,000单位。 |
| C. | 72,000 units. | 72,000单位。 |

原答案 / Supplied answer: B

解析：长期需要收入覆盖总成本。每单位贡献毛利为37.50-12.50=25美元；最低产量为900,000÷25=36,000单位。A把固定成本除以售价，忽略可变成本；C把固定成本除以平均可变成本，误用了分母。

Explanation: Long-run operation requires revenue to cover total cost. Contribution margin is $37.50-$12.50=$25 per unit. Break-even output is $900,000/$25=36,000 units. A divides fixed cost by selling price and ignores variable cost; C incorrectly uses average variable cost as the denominator.

$$Q = TFC / (P - AVC) = 900,000 / (37.50 - 12.50) = 36,000$$

易错点：分母必须是售价减单位可变成本，而不是售价或单位可变成本本身。

Common trap: Use price minus variable cost per unit in the denominator, not either amount alone.

## Q53 短期停产条件

Short-run shutdown condition

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.53

In the short run, a firm most likely shuts down production when:

在短期内，企业最可能在以下哪种情况下停止生产？

| | | |
|---|---|---|
| A. | economic profit is zero. | 经济利润为零。 |
| B. | sunk costs are greater than total revenue. | 沉没成本大于总收入。 |
| C. | total revenue is less than total variable cost. | 总收入小于总可变成本。 |

原答案 / Supplied answer: C

解析：若TR<TVC，生产所得连可变成本也无法覆盖，停产能避免这部分额外损失。零经济利润表示已赚取正常回报，不需要停产。沉没成本已经发生、无法收回，不应决定当前是否生产，因此A和B均不成立。

Explanation: If TR<TVC, production fails to cover even variable costs, and shutting down avoids the additional operating loss. Zero economic profit still provides a normal return. Sunk costs are already incurred and unrecoverable, so they should not determine the current production decision. Thus A and B are incorrect.

Shutdown if TR < TVC; equivalently P < AVC at the contemplated output

易错点：短期有亏损不等于应停产，先问能否覆盖可变成本。

Common trap: A short-run loss does not automatically justify shutdown; first ask whether variable costs are covered.

## Q68 短期继续与长期退出

Continue in the short run; exit in the long run

题源 Q / PDF p.102（经济学 p.12）| 答源 A / PDF p.68

An analyst gathers the following information (in $millions) about a firm operating in a perfectly competitive market:

| | |
|---|---|
| Total variable costs | 700 |
| Total fixed costs | 400 |

If the firm's total revenue is $1,000 million, the firm should:

分析师收集到某家在完全竞争市场经营的企业的以下资料，单位为百万美元：总可变成本700，总固定成本400。若企业总收入为1,000百万美元，该企业应当：

| | | |
|---|---|---|
| A. | stay in the market in both the short run and long run. | 短期和长期都留在市场。 |
| B. | stay in the market in the short run and exit the market in the long run. | 短期留在市场，长期退出市场。 |
| C. | shutdown production in the short run and exit the market in the long run. | 短期停止生产，长期退出市场。 |

原答案 / Supplied answer: B

解析：总成本为700+400=1,100，收入1,000不足以覆盖长期总成本，应长期退出。但收入超过可变成本700，能贡献300用于支付固定成本：继续生产只亏100，停产仍承担400固定成本。因此短期继续，选B；A忽略总成本，C忽略生产可减少短期亏损。

Explanation: Total cost is 700+400=1,100, exceeding revenue of 1,000, so long-run exit is indicated. Yet revenue exceeds variable cost of 700 and contributes 300 toward fixed costs. Operating loses only 100, whereas shutdown leaves fixed costs of 400. Thus the firm operates in the short run but exits in the long run. A ignores total cost; C ignores the smaller short-run operating loss.

TC = 700 + 400 = 1,100

Operating profit = 1,000 - 1,100 = -100

Shutdown profit = -400; operating is better in the short run

易错点：先比较TR与TVC，再比较TR与TC，不能直接因净亏损而选停产。

Common trap: Compare TR with TVC first, then TR with TC; a net loss alone does not imply shutdown.

## Q30 不完全竞争的供给曲线

Supply under imperfect competition

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.30

Under monopolistic competition, a firm's supply curve is represented by:

在垄断竞争下，企业的供给曲线由以下哪一项表示？

| | | |
|---|---|---|
| A. | average cost. | 平均成本。 |
| B. | marginal cost. | 边际成本。 |
| C. | neither average cost nor marginal cost | 既不是平均成本，也不是边际成本。 |

原答案 / Supplied answer: C

解析：垄断竞争企业依据MR=MC确定产量，再依据需求曲线确定价格。其最优价格与产量同时取决于需求及成本，无法用一条独立于需求的曲线表示唯一供给关系。因此平均成本和边际成本都不是该企业的供给曲线。

Explanation: A monopolistically competitive firm chooses output at MR=MC and obtains price from its demand curve. Optimal price and quantity depend on both demand and costs, so there is no unique supply relationship independent of demand. Neither average cost nor marginal cost is its supply curve.

Choose Q where MR = MC; then read P from demand

易错点："MC就是供给曲线"只在特定完全竞争条件下成立，不能套用到垄断竞争。

Common trap: Marginal cost represents supply only under appropriate competitive conditions, not automatically under monopolistic competition.

## Q24 勾结与非勾结寡头

Collusive and non-collusive oligopoly

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.24

Each oligopoly firm faces an individual demand curve under.

在以下哪种情况下，每家寡头企业面对各自的需求曲线？

| | | |
|---|---|---|
| A. | colluding market conditions only. | 仅在市场参与者勾结的情况下。 |
| B. | non-colluding market conditions only. | 仅在市场参与者不勾结的情况下。 |
| C. | both colluding and non-colluding market conditions. | 在勾结与不勾结的两种情况下。 |

原答案 / Supplied answer: B

解析：原答案采用的模型区分是：勾结时企业共同决定行业结果，并瓜分整体市场需求；不勾结时，每家企业独立面对自己的需求。因此按该题口径选B；A和C不符合原答案对这两种模型的划分。

Explanation: The supplied solution distinguishes firms collectively determining industry outcomes and dividing aggregate demand under collusion from firms facing individual demand under non-collusion. Under that model convention, B is the intended answer; A and C do not match the source's distinction.

易错点：这是原题的模型口径，不能推广为"现实中勾结企业绝不可能存在个别或剩余需求"。

Common trap: This is the source's model convention, not a universal claim that a colluding firm can never have individual or residual demand.

原资料核对 / **Source review**

模型限定：保留原答案B，并补充其适用口径；勾结协议的分配、成员偏离及剩余需求属于更一般的分析。

Model qualification: the source answer B is retained. Allocation rules, deviations from collusion, and residual demand require a more general analysis.

## Q26 古诺模型

Cournot model

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.26

According to the Cournot assumption, in an oligopoly market each firm determines its profit-maximizing production level by assuming that other firms will:

根据古诺假设，寡头市场中的每家企业在确定使利润最大化的产量时，假设其他企业将：

| | | |
|---|---|---|
| A. | decrease output. | 减少产量。 |
| B. | not change output. | 不改变产量。 |
| C. | increase output. | 增加产量。 |

原答案 / Supplied answer: B

解析：古诺模型中，每家企业选择自己的产量，把竞争对手的产量当作既定，因此选B。A与C都假定对手主动改变产量，不符合该假设。这不表示各企业永远不调整，而是描述一次最优反应计算时对对手产量的处理。

Explanation: In Cournot competition, each firm chooses its own output while taking rivals' output as given, so B is correct. A and C assume changes in rivals' output and violate this assumption. It does not mean firms never adjust; it describes how a firm treats rivals' quantities when calculating a best response.

易错点：古诺的决策变量是产量；“其他企业产量既定”不等于“市场价格既定”。

Common trap: Cournot uses output as the decision variable. Fixed rival output does not mean a fixed market price.

## Q50 集中度的解释边界

Limits of concentration measures

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.50

Which of the following indicators suggest(s) a monopoly market?

以下哪些指标表明垄断市场？

| | | |
|---|---|---|
| A. | A concentration ratio of 100% only. | 仅集中度比率为100%。 |
| B. | A Herfindahl-Hirschman index of zero only | 仅赫芬达尔-赫希曼指数为零。 |
| C. | Both a concentration ratio of 100% and a Herfindahl-Hirschman index of zero | 集中度比率为100%，且赫芬达尔-赫希曼指数为零。 |

### 原答案 / Supplied answer: A

解析：原答案为A。HHI为零不代表垄断；单一垄断的HHI为1，因此B与C错误。但A需要限定：若CR指最大一家企业的份额，100%即单一垄断；若指前N家份额之和，100%也可能只是寡头。原题未说明N，原解析的结论不够严谨。

Explanation: The supplied answer is A. A zero HHI does not indicate monopoly; a single monopolist has HHI=1, so B and C are wrong. A needs qualification: a one-firm concentration ratio of 100% implies monopoly, but the combined share of the largest N firms can be 100% under oligopoly. The question does not specify N, so the source explanation is too broad.

Single-firm monopoly: CR_1 = 100%; HHI = 1 (decimal shares)

易错点：考试按原答选A，但理解上不能把任何CR_N=100%都当成单一垄断。

Common trap: Retain A as the source answer, but do not treat every CR_N of 100% as proof of a single-firm monopoly.

原资料核对 / **Source review**

原题限定不足：未说明集中度比率包括几家企业。保留原题、原选项及原答案，并将严谨解释与原答案分开。

Insufficient qualification in the source: the number of firms in the concentration ratio is unspecified. The original question, choices, and answer are retained, with the conceptual qualification stated separately.

## Q76 HHI计算基础

Inputs to HHI

题源 Q / PDF p.103（经济学 p.13）| 答源 A / PDF p.76

The Herfindahl-Hirschman index is calculated based on

赫芬达尔-赫希曼指数根据以下哪一项计算？

| | | |
|---|---|---|
| A. | Market shares of the companies. | 企业的市场份额。 |
| B. | elasticity of demand in the market. | 市场需求弹性。 |
| C. | probability of new entry into the market. | 新企业进入市场的概率。 |

原答案 / Supplied answer: A

解析：HHI将各企业市场份额平方后加总，直接输入是份额，因此选A。需求弹性和潜在进入会影响企业的实际市场力量，却不直接进入HHI公式；这也是单凭集中度判断竞争程度的局限。

Explanation: HHI sums squared firm market shares, making market share the direct input. Demand elasticity and potential entry affect actual market power but do not enter the HHI formula. Their omission is a limitation of using concentration alone to assess competition.

$$HHI = s_1^2 + s_2^2 + ... + s_N^2$$

易错点：普通集中度直接相加；HHI先平方再相加。

Common trap: A concentration ratio adds shares directly; HHI squares them first.

# 02 经济周期与经济指标

## Business Cycles and Economic Indicators

6道原题 / 6 original questions: Q7, Q31, Q32, Q37, Q39, Q75

## 先学知识点 / Learn the concepts first

### 01 经济周期不是所有变量同时转向

Business-cycle variables do not turn simultaneously

按本题资料的周期划分：复苏期仍有闲置产能，通胀保持温和；扩张走向成熟时，产能利用和成本压力上升；放缓期企业继续招聘但速度下降，通胀仍可能进一步加速；收缩期通胀才滞后减速。必须区分增长率放缓与经济活动绝对下降，也不能假设就业、订单与通胀同时转向。

Under the phase classification used in these materials, recovery retains spare capacity and moderate inflation. As expansion matures, capacity use and cost pressures increase. During slowdown, firms continue hiring at a slower pace while inflation may accelerate further; during contraction, inflation decelerates with a lag. Distinguish slowing growth from an outright decline, and do not assume employment, orders, and inflation turn simultaneously.

对应原题 / Related originals: Q31, Q75

### 02 领先指标：预期和最早的调整

Leading indicators: expectations and early adjustments

领先指标通常在整体经济之前转向。本题涉及广泛股票指数、制造业平均每周工时、制造商新订单及长期与短期利率之差。股票价格反映预期；企业常先减少工时或订单，再减少员工人数。领先不等于每次都准确预测。

Leading indicators tend to turn before the overall economy. Examples in this set include broad stock indexes, average weekly manufacturing hours, manufacturers' new orders, and the long-short interest-rate spread. Stock prices incorporate expectations, and firms often reduce hours or orders before headcount. Leading status does not guarantee a correct forecast every time.

对应原题 / Related originals: Q7, Q32, Q37, Q39

### 03 同步与滞后指标：产出就业对比调整结果

Coincident versus lagging indicators: current activity versus delayed outcomes

同步指标与整体经济活动大致同时变化，本题包括工业生产和非农就业人数。滞后指标在经济转向后才明显调整，本题包括存货销售比、平均失业持续时间，以及答案资料口径下的消费者价格指标。记忆时比较：工时领先，就业人数同步，失业持续时间滞后。

Coincident indicators move broadly with economic activity; this set uses industrial production and non-agricultural payroll employment. Lagging indicators adjust after economic turning points, including the inventory-sales ratio, average duration of unemployment, and the consumer-price measure used by the supplied solutions. A useful contrast is: hours lead, employment is coincident, and unemployment duration lags.

对应原题 / Related originals: Q7, Q37, Q39

## 04 收益率曲线利差为何会领先经济

Why the yield spread can lead economic activity

本题的利差是10年期国债收益率减隔夜借款利率。市场预期经济放缓及未来短期利率下降时，长期收益率往往相对当前短期利率下降，利差收窄，曲线趋平，甚至倒挂。期限溢价等因素也会影响长端利率，所以它是信号而非机械定律。

The spread in Q32 is the 10-year Treasury yield minus the overnight borrowing rate. Expectations of slower activity and lower future short-term rates often lower long-term yields relative to current short rates, narrowing the spread and flattening or inverting the curve. Term premiums also affect long-term yields, so this is an indicator rather than a mechanical law.

Yield spread = 10-year Treasury yield - Overnight borrowing rate

对应原题 / Related originals: Q32

## 考场触发词 / Exam triggers

快速记忆：股价、工时、新订单领先；工业生产、非农就业同步；存货销售比、失业持续时间滞后。复苏通胀温和，放缓先减招聘。

Fast recall: stock prices, hours, and new orders lead; industrial production and payroll employment coincide; inventory-sales ratios and unemployment duration lag. Recovery has moderate inflation; a slowdown first reduces hiring.

# 用原题检验理解 / Apply the concepts to the originals

## Q31 经济放缓阶段

Slowdown phase

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.31

During the slowdown phase of the business cycle:

在经济周期的放缓阶段：

| | | |
|---|---|---|
| A. | inflation decelerates. | 通胀减速。 |
| B. | business halts new orders. | 企业停止新订单。 |
| C. | business slows its rate of hiring. | 企业放慢招聘速度。 |

### 原答案 / Supplied answer: C

解析：原解析将放缓阶段描述为：企业继续招聘，但速度降低；企业仍在接近产能上限经营，并继续下新订单；通胀进一步加速。因此C正确，B的"停止"过强，A的通胀方向也与原资料的阶段划分不符。

Explanation: The supplied solution describes the slowdown phase as continued hiring at a slower rate, continued new orders while firms operate near capacity, and further inflation acceleration. Thus C is correct. B incorrectly says orders halt, while A gives the opposite inflation direction under the source's phase classification.

易错点：slowdown是增长放缓，并不必然表示产出已下降或经营活动已停止。

Common trap: A slowdown means slower growth, not necessarily falling output or halted business activity.

---

## Q75 复苏期通胀

Inflation during recovery

题源 Q / PDF p.103（经济学 p.13）| 答源 A / PDF p.75

During the recovery phase of the business cycle, inflation most likely:

在经济周期的复苏阶段，通胀最可能：

| | | |
|---|---|---|
| A. | remains moderate. | 保持温和。 |
| B. | further accelerates. | 进一步加速。 |
| C. | decelerates but with a lag. | 减速，但存在时滞。 |

### 原答案 / Supplied answer: A

解析：原资料的阶段对应是：复苏期通胀温和，放缓期通胀进一步加速，收缩期通胀滞后减速。复苏初期仍有闲置产能，需求改善尚未形成强烈价格压力，因此A正确；B与C分别属于其他阶段。

Explanation: The supplied phase mapping is moderate inflation in recovery, further acceleration in slowdown, and lagged deceleration in contraction. Early recovery retains spare capacity, so improving demand does not yet create strong price pressure. A is correct; B and C describe other phases.

易错点：复苏不等于过热，不能看到经济好转就立即判断通胀加速。

Common trap: Recovery is not overheating; improving activity does not immediately imply accelerating inflation.

---

## Q07 领先经济指标

Leading economic indicators

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.7

Which of the following indexes is most likely considered a leading economic indicator?

以下哪一种指数最可能被视为领先经济指标？

| | | |
|---|---|---|
| A. | Consumer price index. | 消费者价格指数。 |
| B. | Broad stock market index. | 广泛股票市场指数。 |
| C. | Industrial production index. | 工业生产指数。 |

### 原答案 / Supplied answer: B

解析：股票价格会提前反映投资者对未来盈利和经济活动的预期，因此广泛股票指数是领先指标。工业生产反映当期生产，属于同步指标；消费者价格指标在本题资料中归为滞后指标，不能作为最佳领先选项。

Explanation: Stock prices incorporate expectations about future earnings and economic activity, making a broad stock index a leading indicator. Industrial production measures current output and is coincident. The supplied classification treats the consumer-price measure as lagging, so it is not the best leading choice.

易错点：股票指数与工业生产都反映经济，但反映的时间位置不同。

Common trap: Stock prices and industrial production both relate to the economy, but their timing differs.

---

## Q32 收益率曲线与衰退预期

Yield curve and downturn expectations

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.32

The interest rate spread between 10-year treasury yields and overnight borrowing rates most likely:

10年期国债收益率与隔夜借款利率之间的利差，最可能：

| | | |
|---|---|---|
| A. | is a lagging economic indicator. | 是滞后经济指标。 |
| B. | decreases when the market expects an economic downturn. | 在市场预期经济下滑时收窄。 |
| C. | increases as the market expects future short-term interest rates to decrease. | 在市场预期未来短期利率下降时扩大。 |

### 原答案 / Supplied answer: B

解析：经济下滑预期常伴随未来降息预期，长期收益率相对于当前短期利率下降，使长减短利差收窄，因此选B。这一利差通常是领先而非滞后指标；C把预期短期利率下降对长端收益率与利差的方向写反。

Explanation: Downturn expectations often imply lower future short-term rates, lowering long-term yields relative to current short rates and narrowing the long-short spread. The spread is generally leading, not lagging. C reverses the usual effect of lower expected future short rates on long yields and the spread.

Spread = 10-year Treasury yield - Overnight borrowing rate

易错点：先写清利差是长期减短期，再判断扩大还是收窄。

Common trap: Write the spread as long-term minus short-term before deciding whether it widens or narrows.

---

## Q37 滞后经济指标

Lagging economic indicators

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.37

Which of the following is most likely a lagging economic indicator?

以下哪一项最可能是滞后经济指标？

| | | |
|---|---|---|
| A. | Inventory-sales ratio. | 存货销售比。 |
| B. | S&P 500 Stock Index. | 标普500股票指数。 |
| C. | Manufacturers' new orders for consumer goods and materials. | 制造商消费品与原材料新订单。 |

### 原答案 / Supplied answer: A

解析：存货销售比反映销售变化后存货调整的结果，属于滞后指标。标普500体现前瞻预期，新订单预示未来生产，两者属于领先指标，因此排除B和C。

Explanation: The inventory-sales ratio reflects inventory adjustment following changes in sales and is classified as lagging. The S&P 500 incorporates forward-looking expectations, while new orders signal future production. Both B and C are leading indicators.

易错点："存货销售比"与"新订单"不是同一种指标：前者滞后，后者领先。

Common trap: The inventory-sales ratio and new orders are different indicators: the former lags and the latter leads.

## Q39 同步经济指标

Coincident economic indicators

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.39

Which of the following is most likely a coincident indicator of economic activity?

以下哪一项最可能是经济活动的同步指标？

| | | |
|---|---|---|
| A. | Average duration of unemployment. | 平均失业持续时间。 |
| B. | Average weekly hours, manufacturing. | 制造业平均每周工时。 |
| C. | Employees on non-agricultural payrolls. | 非农业工资名册中的雇员人数。 |

### 原答案 / Supplied answer: C

解析：非农就业人数随当期经济活动变化，属于同步指标。企业往往先调整现有员工工时，再改变员工人数，所以制造业周工时是领先指标；平均失业持续时间较晚才改善，属于滞后指标。

Explanation: Non-agricultural payroll employment moves with current activity and is coincident. Firms often adjust existing employees' hours before changing headcount, so manufacturing weekly hours lead. Average unemployment duration improves later and is lagging.

易错点：工时领先，就业人数同步，失业持续时间滞后。

Common trap: Hours lead, employment is coincident, and unemployment duration lags.

# 03 财政政策

## Fiscal Policy

11道原题 / 11 original questions: Q1, Q5, Q15, Q16, Q22, Q23, Q25, Q35, Q36, Q58, Q62

## 先学知识点 / Learn the concepts first

### 01 先分清谁在行动：政府还是央行

Identify the decision maker: government or central bank

财政政策使用政府支出与税收影响总需求、收入分配和资源配置。货币政策则通过央行的利率及流动性操作影响货币与信贷。看见 tax、government spending、transfer payments，先想到财政；看见 policy rate、money、credit，先想到货币。

Fiscal policy uses government spending and taxation to influence aggregate demand, income distribution and resource allocation. Monetary policy uses central-bank interest-rate and liquidity actions to influence money and credit. Taxes, government spending and transfers signal fiscal policy; policy rates, money and credit signal monetary policy.

对应原题 / Related originals: Q1, Q15, Q58

### 02 扩张与紧缩：逐个判断工具的方向

Expansion and contraction: classify each instrument

扩张性财政政策通常是增加政府支出或减税；紧缩性通常是减少支出或加税。若税收和支出同时下降，两者方向相反，不能只凭方向判断净效果，还须比较规模。判断财政时，不要把降息当成减税。

Expansionary fiscal policy generally raises spending or cuts taxes; contractionary fiscal policy cuts spending or raises taxes. If both spending and taxes fall, their effects oppose each other, so the net effect depends on their sizes. An interest-rate cut is monetary policy, not a tax cut.

Expansion: G rises or T falls. Contraction: G falls or T rises.

对应原题 / Related originals: Q16, Q35, Q62

### 03 转移支付、经常支出与资本支出

Transfers, current spending and capital spending

转移支付是福利等收入转移，政府不因此获得当期商品或服务，例如失业福利。经常支出购买持续提供的公共服务；资本支出建设道路等基础设施。转移支付并非直接计入 GDP 的政府购买，但可通过居民消费影响总需求。

Transfers redistribute income, such as unemployment benefits, without purchasing current goods or services. Current spending buys recurring public services; capital spending funds assets such as roads. Transfers are not government purchases directly counted in GDP, although they can influence aggregate demand through household consumption.

对应原题 / Related originals: Q5, Q23, Q62

### 04 自动稳定器与相机抉择：是否需要新决策

Automatic stabilizers versus discretionary decisions

经济衰退使利润下降、税收自动减少，或使失业福利自动增加，均属于自动稳定器：既有规则自动减缓冲击。批准新的基建项目属于主动改变支出的相机抉择政策。不要把“税收下降”一律读成“政府下调税率”。

A recession can automatically lower tax receipts or raise unemployment benefits under existing rules. These automatic stabilizers cushion the downturn without a new policy decision. Approving new infrastructure projects is a discretionary spending decision. Lower tax revenue does not necessarily mean a legislated tax-rate cut.

对应原题 / Related originals: Q23, Q25

## 05 政策时滞：立即影响支出不等于没有任何时滞

Policy lags: immediate spending effects do not mean no lag

消费税等间接税一旦改变，就会改变购买成本，可较快影响支出。大型资本项目往往需要审批、设计和施工，实施时滞较长。汇率目标属于货币或汇率政策。本题比较的是工具实施后的传导速度。

Once changed, indirect taxes such as sales taxes alter purchase costs and can affect spending quickly. Large capital projects require approval, design and construction and therefore have longer implementation lags. An exchange-rate target belongs to monetary or exchange-rate policy. The question compares the speed of effects after implementation.

对应原题 / Related originals: Q36

## 06 财政与货币搭配：私人部门占比怎么变

Policy combinations and the private share of GDP

在工资和价格僵硬的题设下，财政紧缩配合货币宽松，使公共支出相对缩小，同时低利率支持私人消费和投资，因此私人部门占 GDP 比重趋升。财政宽松配合货币紧缩则相反。占比的变化不能直接等同于总 GDP 的变化。

With sticky wages and prices, fiscal contraction combined with monetary expansion reduces the public sector's relative role while lower interest rates support private consumption and investment. The private share of GDP therefore tends to rise. The opposite mix tends to favor the public share. A change in shares does not by itself determine the change in total GDP.

对应原题 / Related originals: Q16, Q22

## 考场触发词 / Exam triggers

答题顺序：先识别工具归属，再判断扩张或紧缩，最后区分主动政策与自动反应。优先练 Q1、Q23、Q22、Q35；Q62 原题有缺词，按缺损题处理。

Classify the instrument first, determine expansion or contraction second, then distinguish a new decision from an automatic response. Prioritize Q1, Q23, Q22 and Q35. Q62 has missing original wording and must be treated as an incomplete item.

# 用原题检验理解 / Apply the concepts to the originals

## Q01 财政与货币的界线

Fiscal versus monetary policy

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.1

Fiscal policy refers to the government's decisions about:

财政政策是指政府关于下列哪项的决策？

| | | |
|---|---|---|
| A. | taxation only. | 仅税收。 |
| B. | taxation and spending only. | 仅税收和支出。 |
| C. | taxation, spending, and the quantity of money in the economy. | 税收、支出以及经济中的货币数量。 |

### 原答案 / Supplied answer: B

解析：财政政策的两类核心工具是税收与政府支出，因此 B 完整。A 漏了支出；C 又把属于货币政策的货币数量纳入。

Explanation: Taxation and government spending are the two core fiscal instruments, so B is complete. A omits spending; C incorrectly adds the money quantity, which belongs to monetary policy.

易错点："政府做的事"不全都叫财政政策；本题按工具分类。

Common trap: Not every public-sector activity is fiscal policy; classify the instrument.

## Q15 财政政策目标

Fiscal-policy objectives

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.15

An objective of fiscal policy is to:

财政政策的一个目标是：

| | | |
|---|---|---|
| A. | supervise the banking system. | 监管银行体系。 |
| B. | influence the quantity of credit in an economy. | 影响经济中的信贷数量。 |
| C. | distribute income among different segments of the population. | 在不同人口群体之间分配收入。 |

### 原答案 / Supplied answer: C

解析：税收和转移支付可以改变不同群体的可支配收入，因此再分配属于财政政策目标。银行监管属于金融监管或央行职能；影响信贷数量主要属于货币政策。

Explanation: Taxes and transfers can change disposable income across groups, making redistribution a fiscal objective. Bank supervision is a regulatory or central-bank function; influencing credit quantity is principally monetary policy.

易错点：央行的监管职能与货币政策操作也并非完全同义；此处二者均不是财政工具。

Common trap: Central-bank regulation is not identical to monetary-policy operations, but neither is a fiscal instrument here.

## Q58 总需求管理

Managing aggregate demand

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.58

Which of the following is most likely an objective of fiscal policy?

下列哪项最可能是财政政策的目标？

| | | |
|---|---|---|
| A. | Maintaining price stability. | 维持价格稳定。 |
| B. | Affecting aggregate demand. | 影响总需求。 |
| C. | Achieving an exchange rate target. | 达到汇率目标。 |

原答案 / Supplied answer: B

解析：政府通过支出与税收影响总需求，是本题最直接的财政目标。价格稳定通常是央行的主要目标；汇率目标属于货币或汇率政策。财政也会影响物价，但不是本题最贴切的分类。

Explanation: Government spending and taxation directly influence aggregate demand, making B the best fiscal-policy objective here. Price stability is usually a central-bank objective; an exchange-rate target belongs to monetary or exchange-rate policy. Fiscal policy can affect prices, but A is not the best classification.

易错点：选最直接对应的目标，不能把“可能有影响”当成“主要职责”。

Common trap: Choose the directly associated objective, not every possible indirect effect.

---

## Q16 政策组合识别

Identifying the policy mix

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.16

A decrease in taxes and an increase in interest rates most likely reflect

减税并提高利率最可能反映：

| | | |
|---|---|---|
| A. | easy fiscal policy and tight monetary policy. | 宽松财政政策与紧缩货币政策。 |
| B. | tight fiscal policy and easy monetary policy. | 紧缩财政政策与宽松货币政策。 |
| C. | tight fiscal policy and tight monetary policy. | 紧缩财政政策与紧缩货币政策。 |

原答案 / Supplied answer: A

解析：减税提高可支配收入，是宽松财政；提高利率抑制借款和支出，是紧缩货币。两项必须分别判断，故 A。B、C 都将减税错当成财政紧缩。

Explanation: A tax cut supports disposable income and is fiscal easing; higher interest rates discourage borrowing and spending and are monetary tightening. Classify the two separately: A. Both B and C misclassify the tax cut.

易错点：不同政策可以方向相反，不要强行给整个组合一个宽松或紧缩标签。

Common trap: Fiscal and monetary policies can move in opposite directions.

---

## Q35 财政紧缩方向

Contractionary fiscal instruments

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.35

Which of the following fiscal policy actions is most likely contractionary?

下列哪项财政政策行动最可能是紧缩性的？

| | | |
|---|---|---|
| A. | Increasing taxes and decreasing spending | 增加税收并减少支出。 |
| B. | Decreasing taxes and increasing spending | 减少税收并增加支出。 |
| C. | Decreasing taxes and decreasing spending | 减少税收并减少支出。 |

原答案 / Supplied answer: A

解析：加税减少私人可支配收入，减支降低政府需求，两者都紧缩。B 两项都扩张；C 的减税与减支方向相反，缺少规模信息时不能确定净效应。

Explanation: Higher taxes reduce private disposable income, and lower government spending reduces public demand: both are contractionary. B is expansionary on both dimensions. C combines opposing effects, so its net effect requires size information.

易错点：同时变化的两个工具，要先分别判方向。

Common trap: Classify each instrument before combining their effects.

## Q62 扩张性财政政策；原题缺词

Expansionary fiscal policy; incomplete original option

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.62

Which of the following is an expansionary fiscal policy?

下列哪项属于扩张性财政政策？

| | | |
|---|---|---|
| A. | An increase in sales taxes. | 提高销售税。 |
| B. | A decrease in interest rates. | 降低利率。 |
| C. | in public spending on infrastructure. | ……用于基础设施的公共支出（原文缺失 / Missing information）。 |

原答案 / Supplied answer: C

解析：答案文档选择 C，并以新增基础设施等公共支出解释扩张性财政政策。A 提高销售税是紧缩；B 降息是货币政策。不过原题 C 缺少变化方向，不能把答案解析中的含义擅自补进原题。

Explanation: The supplied solution selects C and explains new public spending on infrastructure and social goods as expansionary fiscal policy. A is fiscal tightening; B is monetary easing. However, original option C omits the direction of change; the solution's interpretation must not be silently inserted into the original item.

易错点：本题仅能记录"原答案 C"；不宜把缺损题直接计入独立测验正确率。

Common trap: Record C as the supplied answer; do not treat the incomplete item as an unambiguous self-test.

原资料核对 / **Source review**

原题 C 原文为"in public spending on infrastructure."，缺少开头文字。原答案 C 可核对，但完整选项待补充。

Original C reads "in public spending on infrastructure." Its opening wording is missing. The supplied answer is C, but the complete option remains unavailable.

## Q05 转移支付

Transfer payments

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.5

With respect to fiscal policy, transfer payments are best described as:

就财政政策而言，转移支付最适合描述为：

| | | |
|---|---|---|
| A. | welfare payments. | 福利支付。 |
| B. | infrastructure spending. | 基础设施支出。 |
| C. | spending on recurring goods and services. | 购买经常性商品和服务的支出。 |

### 原答案 / Supplied answer: A

解析：转移支付通过福利体系将收入转给居民，并不对应政府购买当期商品或服务。基础设施是资本支出；持续提供公共商品或服务属于经常支出。

Explanation: Transfers redistribute income to households through welfare programs without purchasing current goods or services. Infrastructure is capital spending; recurring goods and services are current spending.

易错点：福利支付与政府购买要分开。

Common trap: Distinguish welfare transfers from government purchases.

## Q23 相机抉择与自动稳定器

Discretionary policy versus stabilizers

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.23

Which of the following changes most likely reflects a discretionary fiscal policy action?

下列哪项变化最可能体现相机抉择的财政政策行动？

| | | |
|---|---|---|
| A. | A decrease in corporate tax revenues due to lower corporate profitability. | 企业盈利下降导致企业税收收入减少。 |
| B. | An increase in government expenditures due to new infrastructure projects. | 新的基础设施项目导致政府支出增加。 |
| C. | An increase in payments of unemployment benefits due to increasing unemployment. | 失业增加导致失业福利支付增加。 |

### 原答案 / Supplied answer: B

解析：新的基建项目需要政府主动决策，是相机抉择财政政策。盈利下降使税收减少，或失业增加使福利支出增加，通常是在既有制度下自动发生的稳定器作用。

Explanation: New infrastructure projects require an active government decision and are discretionary fiscal policy. Lower taxes collected because profits fall, and higher unemployment benefits because unemployment rises, usually operate automatically under existing rules.

易错点：主动改变规则或项目，才是本题的 discretionary。

Common trap: Look for an active change in policy or projects.

## Q25 自动稳定器

Automatic stabilizers

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.25

A decline in tax revenues due to a recession is best described as an example of a(n):

经济衰退导致税收收入下降，最适合描述为：

| | | |
|---|---|---|
| A. | automatic stabilizer. | 自动稳定器。 |
| B. | expansionary fiscal policy. | 扩张性财政政策。 |
| C. | contractionary fiscal policy. | 紧缩性财政政策。 |

原答案 / Supplied answer: A

解析：题干只有经济衰退导致税收下降，没有新的减税决策。既有税制自动降低税负、缓冲收入冲击，最准确的分类是自动稳定器。它有稳定需求的作用，但不等于主动实施扩张措施。

Explanation: Tax receipts fall because of the recession, with no new tax-cut decision stated. Existing tax rules automatically cushion the income shock, so an automatic stabilizer is the most precise classification. Its supportive effect does not imply a new discretionary expansion.

易错点：税收收入下降不等于税率被下调。

Common trap: Lower tax revenue does not imply a lower tax rate.

---

## Q36 财政工具与时滞

Fiscal tools and timing

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.36

A fiscal policy tool that can immediately influence spending is most likely.

下列哪种财政政策工具最可能立即影响支出？

| | | |
|---|---|---|
| A. | indirect taxes. | 间接税。 |
| B. | exchange rate targeting. | 汇率目标。 |
| C. | capital expenditure plans. | 资本支出计划。 |

原答案 / Supplied answer: A

解析：间接税调整实施后会改变商品购买价格，较快影响支出。资本项目从规划到执行通常有较长时滞。汇率目标不是财政工具。这里“立即”是相对于其他选项而言。

Explanation: Once implemented, an indirect-tax change alters purchase prices and can affect spending quickly. Capital projects usually have longer planning and implementation lags. Exchange-rate targeting is not a fiscal instrument. “Immediately” is relative to these alternatives.

易错点：不要把“实施后影响较快”理解为决策、立法和传导都没有时滞。

Common trap: Faster effects after implementation do not eliminate decision or legislative lags.

---

## Q22 私人部门占 GDP 比重

Private-sector share of GDP

题源 Q / PDF p.94（经济学 p.4）| 答源 A / PDF p.22

Assuming wages and prices are rigid, which of the following policy combinations most likely leads to the private sector increasing its share of GDP?

假设工资和价格僵硬，下列哪种政策组合最可能使私人部门占 GDP 的比重上升？

| | | |
|---|---|---|
| A. | Easy fiscal policy and tight monetary policy. | 宽松财政政策与紧缩货币政策。 |
| B. | Tight monetary policy and tight fiscal policy. | 紧缩货币政策与紧缩财政政策。 |
| C. | Tight fiscal policy and easy monetary policy. | 紧缩财政政策与宽松货币政策。 |

原答案 / Supplied answer: C

解析：财政紧缩降低公共部门的相对需求，货币宽松及较低利率支持私人消费和投资，因此私人部门份额趋升。A 倾向提高公共部门份额；B 同时压制两部门需求，不能得到题设结论。

Explanation: Fiscal contraction reduces the relative public-sector demand, while monetary expansion and lower rates support private consumption and investment. The private share tends to rise. A tends to favor the public share; B restrains both sectors and does not imply the stated result.

易错点：问的是 GDP 构成比例，不是总 GDP 一定上升。

Common trap: The question concerns GDP composition, not a guaranteed rise in total GDP.

# 04 货币政策

## Monetary Policy

16道原题 / 16 original questions: Q3, Q8, Q11, Q12, Q14, Q17, Q27, Q33, Q38, Q56, Q59, Q60, Q64, Q67, Q69, Q70

## 先学知识点 / Learn the concepts first

### 01 货币政策的目标与法定货币

Monetary objectives and fiat money

本题库将价格稳定作为大多数央行的主要目标。法定货币的价值来自法律地位及公众接受，而非承诺兑换贵金属。从金本位转向法定货币后，货币价值更依赖可信的政策安排，因此央行作用更关键。

This question set identifies price stability as the main objective of most central banks. Fiat money rests on legal status and public acceptance rather than a promise of precious-metal redemption. Moving from a gold standard to fiat money makes a credible monetary framework, and thus the central bank, more important.

对应原题 / Related originals: Q3, Q14, Q27, Q38

### 02 看资金方向：注入还是回收流动性

Follow the cash: injecting or withdrawing liquidity

央行向银行提供回购融资，是现金贷款人，会注入流动性；央行卖出国债则收回银行资金，通常抑制货币与信贷增长。提高准备金要求也属紧缩。扩张性利率政策通常通过降低利率支持融资、投资与支出。

When the central bank lends cash through a repo operation, it injects liquidity. Selling government bonds withdraws bank funds and generally restrains money and credit growth. Higher reserve requirements are also contractionary. Expansionary interest-rate policy typically supports financing, investment and spending through lower rates.

对应原题 / Related originals: Q33, Q64, Q70

### 03 传导机制：利率如何影响通胀

Transmission: how interest rates affect inflation

政策利率变化会经银行贷款利率、资产价格、预期和汇率影响消费与投资，再影响总需求、产出和通胀。它不是即时、固定比例的机械传导。题目若问“信用数量”，优先识别为货币政策的直接作用对象。

Policy-rate changes pass through lending rates, asset prices, expectations and exchange rates to consumption and investment, then to aggregate demand, output and inflation. Transmission is neither instantaneous nor a fixed mechanical ratio. The quantity of credit is a direct focus of monetary policy.

对应原题 / Related originals: Q3, Q8, Q70

### 04 有效通胀目标制：独立、可信、透明

Effective inflation targeting: independence, credibility and transparency

独立性减少短期政治干预，可信度帮助稳定预期，透明度帮助公众理解决策。通胀目标通常是低而略为正的水平，以兼顾价格稳定和通缩缓冲；并非零或负值。独立决策不等于没有问责。

Independence limits short-term political interference, credibility helps anchor expectations, and transparency explains decisions. An inflation target is generally low but positive, supporting price stability while providing a buffer against deflation; it need not be zero or negative. Independence does not mean an absence of accountability.

对应原题 / Related originals: Q8, Q11, Q69

## 05 中性利率：先找基准，再比较政策利率

Neutral interest rate: find the benchmark before comparing

本题采用近似：名义中性政策利率等于实际趋势增长率加长期预期通胀；Q67 以央行通胀目标代替长期预期通胀。政策利率高于中性为紧缩，低于中性为扩张。这是题库采用的简化关系，不能把实际趋势增长率在所有模型中都当成真实中性利率。

The questions use the approximation that the nominal neutral policy rate equals real trend growth plus long-run expected inflation. Q67 uses the inflation target for long-run expected inflation. A policy rate above neutral is contractionary; below neutral it is expansionary. This is the set's simplifying relationship, not a claim that real trend growth equals the real neutral rate in every model.

i_neutral = g_trend + expected inflation; contractionary if i_policy > i_neutral.

对应原题 / Related originals: Q56, Q67

## 06 为何通缩较难处理：利率下限与流动性陷阱

Why deflation is harder: the lower bound and liquidity traps

传统货币政策可通过加息抑制通胀，但通缩时降息空间可能受到有效下限约束。若货币需求极富弹性，新增货币可能被持有而不带动支出，即流动性陷阱。维持汇率目标也可能限制独立调节国内利率。不要把有效下限记成"任何名义利率都绝不可能低于零"。

Conventional policy can raise rates to restrain inflation, but an effective lower bound can constrain rate cuts during deflation. With extremely elastic money demand, extra money may be held instead of stimulating spending: a liquidity trap. Maintaining an exchange-rate target may also restrict independent domestic rate setting. An effective lower bound is not a claim that every nominal rate must always be nonnegative.

对应原题 / Related originals: Q12, Q17, Q59, Q60

## 考场触发词 / Exam triggers

先问"央行给出现金还是收回现金"；再问"利率相对中性水平高还是低"。独立、可信、透明一起记；流动性陷阱、通缩、有效利率下限一起记。

Ask whether the central bank supplies or withdraws cash, then whether the policy rate is above or below neutral. Learn independence, credibility and transparency together; likewise group liquidity traps, deflation and the effective lower bound.

# 用原题检验理解 / Apply the concepts to the originals

## Q03 货币政策与信贷

Monetary policy and credit

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.3

Which of the following economic policies is most likely directed toward influencing the quantity of credit in an economy?

下列哪项经济政策最可能旨在影响经济中的信贷数量？

| | | |
|---|---|---|
| A. | Fiscal policy only. | 仅财政政策。 |
| B. | Monetary policy only. | 仅货币政策。 |
| C. | Both fiscal policy and monetary policy. | 财政政策和货币政策两者。 |

### 原答案 / Supplied answer: B

解析：央行通过货币政策影响货币与信贷数量，因此 B。财政政策的直接工具是税收和支出；虽可间接影响融资需求，仍不是本题定义中的直接信用调控政策。

Explanation: Monetary policy influences money and credit quantities, so B is correct. Fiscal instruments are taxation and spending. They may indirectly affect financing demand, but that does not make them the direct credit-control policy asked about here.

易错点：区分政策的直接对象与间接影响。

Common trap: Distinguish the policy’s direct focus from indirect effects.

## Q14 法定货币

Fiat money

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.14

Fiat money:

法定货币：

| | | |
|---|---|---|
| A. | is not currently used in any major economy. | 目前没有任何主要经济体使用。 |
| B. | can be exchanged for a precious metal at the country's central bank. | 可以在本国央行兑换贵金属。 |
| C. | derives its value via government decree and because people accept it for payment. | 因政府法令以及人们接受其用于支付而具有价值。 |

### 原答案 / Supplied answer: C

解析：法定货币依赖法律地位与公众接受，而不是承诺兑换某种商品。A 否认其使用，B 则描述可兑换商品货币的特征，均不符合法定货币定义。

Explanation: Fiat money rests on legal status and public acceptance, not a promise of commodity redemption. A denies its use; B describes a commodity-convertibility feature rather than the defining property of fiat money.

易错点：fiat 不等于以黄金储备承诺兑换。

Common trap: Fiat money does not imply a gold-redemption promise.

## Q27 央行首要目标

Primary central-bank objective

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.27

The main objective of most central banks is to maintain:

大多数央行的主要目标是维持：

| | | |
|---|---|---|
| A. | price stability. | 价格稳定。 |
| B. | gold reserves. | 黄金储备。 |
| C. | an employment target. | 一个就业目标。 |

原答案 / Supplied answer: A

解析：本题库以价格稳定作为大多数央行的主要目标。某些央行也关注就业等目标，但不能据此把就业作为所有央行的首要目标；持有黄金是一项资产安排而非主要政策目标。

Explanation: The question set identifies price stability as the main objective of most central banks. Some also pursue employment goals, but that does not make employment the best general answer. Holding gold is an asset arrangement, not the primary policy objective.

易错点：留意 most，不要把某一个央行的制度推广到全部。

Common trap: Read “most”; do not generalize one central bank’s mandate to all.

## Q38 金本位转向法定货币

Moving from gold to fiat money

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.38

As an economy moves from the gold standard to a system of fiat currency, the role of the central bank most likely:

当一个经济体从金本位转向法定货币制度时，央行的作用最可能：

| | | |
|---|---|---|
| A. | becomes less crucial. | 变得较不关键。 |
| B. | remains unchanged. | 保持不变。 |
| C. | becomes more crucial. | 变得更加关键。 |

原答案 / Supplied answer: C

解析：金本位下贵金属兑换约束货币安排；法定货币下价值更依赖货币政策与公众信任。管理货币供给、维护价格稳定和可信度的央行因此更关键，A、B 不反映这种变化。

Explanation: Gold convertibility constrains monetary arrangements. With fiat money, value depends more on policy and public confidence. The central bank’s role in managing money and sustaining price stability and credibility therefore becomes more important, contrary to A and B.

易错点：脱离黄金兑换并不意味着不需要管理货币。

Common trap: Removing gold convertibility does not remove the need for monetary management.

## Q33 回购操作与流动性

Repo operations and liquidity

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.33

Which of the following monetary policy actions is most likely considered expansionary? The central bank.

下列哪项货币政策行动最可能属于扩张性？央行：

| | | |
|---|---|---|
| A. | acts as the lender in a repurchase agreement. | 在回购协议中充当贷款人。 |
| B. | sells government bonds to commercial banks. | 向商业银行出售政府债券。 |
| C. | raises reserve requirements of commercial banks. | 提高商业银行的准备金要求。 |

原答案 / Supplied answer: A

解析：央行作为现金贷款人，把资金借给银行并取得证券担保，因此注入流动性。出售国债收回银行资金；提高准备金要求限制可用资金与信贷，两者都偏紧缩。

Explanation: As cash lender, the central bank supplies funds against securities collateral and injects liquidity. Selling bonds withdraws bank funds, while higher reserve requirements restrict usable funds and credit. Both B and C are contractionary.

易错点：不要只背 repo 名字；判断谁把现金交给谁。

Common trap: Do not classify solely by the word “repo”; trace who supplies cash.

## Q64 公开市场卖出

Open-market sales

题源 Q / PDF p.101（经济学 p.11）| 答源 A / PDF p.64

When a central bank sells government bonds to commercial banks, broad money growth:

当央行向商业银行出售政府债券时，广义货币增长：

| | | |
|---|---|---|
| A. | decreases, | 下降。 |
| B. | remains the same. | 保持不变。 |
| C. | increases. | 上升。 |

原答案 / Supplied answer: A

解析：银行支付资金购债，央行卖债收回流动性，通常限制银行扩张信贷的能力，因此广义货币增速下降。这里讨论的是政策方向，不是固定乘数或保证货币存量立即绝对下降。

Explanation: Banks pay for the bonds, so the central bank withdraws liquidity and generally restrains credit expansion. Broad-money growth therefore decreases. This is a directional policy effect, not a fixed multiplier or a guarantee that the money stock immediately falls.

易错点：增长放缓不等于存量必然减少。

Common trap: Lower growth does not necessarily mean a lower level.

## Q70 扩张政策与流动性

Expansionary policy and liquidity

题源 Q / PDF p.102（经济学 p.12）| 答源 A / PDF p.70

To increase liquidity, a central bank most likely implements an interest rate policy that is:

为增加流动性，央行最可能实施哪种利率政策？

| | | |
|---|---|---|
| A. | contractionary | 紧缩性。 |
| B. | neutral. | 中性。 |
| C. | expansionary. | 扩张性。 |

### 原答案 / Supplied answer: C

解析：扩张性利率政策通常通过较低利率支持融资和流动性。紧缩性政策抑制融资与需求；中性政策不以额外刺激为目标，因此 C 最符合目的。

Explanation: Expansionary interest-rate policy typically supports financing and liquidity through lower rates. Contraction restrains financing and demand; neutral policy does not seek additional stimulus. C best matches the stated objective.

易错点：题目给出"增加流动性"，先确定方向，再选择政策标签。

Common trap: Translate the liquidity objective into a policy direction before choosing the label.

## Q08 有效央行的三项特征

Three qualities of an effective central bank

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.8

Independence, credibility, and transparency are most likely:

独立性、可信度和透明度最可能是：

| | | |
|---|---|---|
| A. | key objectives of fiscal policy. | 财政政策的主要目标。 |
| B. | properties of the monetary transmission mechanism. | 货币政策传导机制的特征。 |
| C. | qualities that determine the success of an inflation-targeting central bank. | 决定实行通胀目标制的央行能否成功的特质。 |

### 原答案 / Supplied answer: C

解析：这三项是有效通胀目标制的制度条件。传导机制讲的是利率如何经银行贷款、资产价格、预期和汇率影响经济；财政目标则涉及总需求和分配，因此 A、B 均不匹配。

Explanation: These are institutional qualities supporting successful inflation targeting. Transmission describes how rates affect the economy through lending, asset prices, expectations and exchange rates. Fiscal objectives concern demand and distribution, so neither A nor B matches.

易错点：央行特质、政策目标、传导渠道是三个层次。

Common trap: Separate institutional qualities, policy objectives and transmission channels.

## Q11 通胀目标的水平

The level of an inflation target

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.11

The inflation target of an effective central bank is most likely.

一家有效央行的通胀目标最可能：

| | | |
|---|---|---|
| A. | equal to zero to avoid the risk of deflation. | 等于零，以避免通货紧缩风险。 |
| B. | sufficiently below zero to maintain high credibility. | 明显低于零，以维持高度可信度。 |
| C. | low enough to ensure a significant degree of price stability. | 足够低，以确保相当程度的价格稳定。 |

### 原答案 / Supplied answer: C

解析：通胀目标应低到维持价格稳定，且通常略高于零以预留通缩缓冲。零通胀不能保证避免通缩；负目标反而意味着目标性价格下降。可信度来自可信的政策安排，不是目标越低越好。

Explanation: The target should be low enough for price stability and generally positive enough to provide a deflation buffer. Zero inflation does not guarantee protection from deflation, and a negative target seeks falling prices. Credibility does not mean choosing the lowest possible number.

易错点：价格稳定不等于每期物价完全不变。

Common trap: Price stability does not require an exactly unchanged price level every period.

## Q69 独立性与问责

Independence and accountability

题源 Q / PDF p.102（经济学 p.12）| 答源 A / PDF p.69

To be effective in targeting inflation a central bank is least likely to need:

为了有效实行通胀目标制，央行最不可能需要的是：

| | | |
|---|---|---|
| A. | government oversight. | 政府监督。 |
| B. | transparency of decisions. | 决策透明度。 |
| C. | credibility with market participants. | 市场参与者对其的信任。 |

### 原答案 / Supplied answer: A

解析：本题强调独立、透明与可信。B、C 直接对应后两项；A 不是这组三项必要特征，且政府对操作的干预可能损害独立性。但答案不意味着央行完全无需法律监督或公众问责。

Explanation: The item emphasizes independence, transparency and credibility. B and C directly match two qualities. A is not one of the three, and government interference in operations may undermine independence. This does not mean a central bank requires no legal oversight or public accountability.

易错点："独立性"不等于"无需任何监督"，避免过度推广选项。

Common trap: Independence does not mean absence of all oversight; do not overgeneralize.

## Q56 名义中性政策利率

Nominal neutral policy rate

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.56

The neutral policy rate is equal to:

中性政策利率等于：

| | | |
|---|---|---|
| A. | long-run expected inflation. | 长期预期通胀率。 |
| B. | the real trend rate of growth of the underlying economy. | 基础经济的实际趋势增长率。 |
| C. | long-run expected inflation plus the real trend rate of growth of the underlying economy. | 长期预期通胀率加上基础经济的实际趋势增长率。 |

原答案 / Supplied answer: C

解析：按本题近似，中性名义利率由实际部分与预期通胀部分组成，因此相加得 C。A 漏掉实际部分；B 只保留实际部分。此处采用实际趋势增长率代表实际中性部分。

Explanation: Under the question’s approximation, the nominal neutral rate combines a real component with expected inflation, giving C. A omits the real component; B omits expected inflation. The item uses real trend growth as the proxy for the real neutral component.

$$i_{neutral} = g_{trend} + \text{expected inflation}$$

易错点：名义中性利率与实际中性利率不同；本题还采用了增长率近似。

Common trap: Distinguish nominal from real neutral rates and remember the growth-rate approximation.

## Q67 由紧缩反推通胀目标

Inferring the inflation target

题源 Q / PDF p.101（经济学 p.11）| 答源 A / PDF p.67

An analyst gathers the following data about an economy:

| | |
|---|---|
| Real trend growth rate | 0.5% |
| Central bank's policy rate | 1.5% |

If monetary policy is contractionary, the central bank's inflation target is:

某分析师取得以下经济数据：实际趋势增长率为 0.5%，央行政策利率为 1.5%。若货币政策属于紧缩性，央行的通胀目标为：

| | | |
|---|---|---|
| A. | less than 1.0%. | 低于 1.0%。 |
| B. | equal to 1.0%. | 等于 1.0%。 |
| C. | greater than 1.0%. | 高于 1.0%。 |

### 原答案 / Supplied answer: A

解析：紧缩要求政策利率高于中性利率。按题设近似，1.5% > 0.5% + 通胀目标，所以通胀目标 < 1.0%。等于 1.0% 时政策中性；高于 1.0% 时当前政策利率反而低于中性。

Explanation: Contraction requires the policy rate to exceed neutral. Using the item’s approximation, 1.5% > 0.5% + inflation target, so the target is below 1.0%. A target of 1.0% makes policy neutral; a higher target puts the policy rate below neutral.

$$1.5\% > 0.5\% + \text{inflation target}$$

$$\text{inflation target} < 1.0\%$$

易错点：用严格大于号；“紧缩”不能包含恰好中性。

Common trap: Use a strict inequality: contraction excludes exact neutrality.

## Q12 货币政策的有效性

Effectiveness of monetary policy

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.12

Under which of the following conditions is monetary policy most effective? When the:

在下列哪种情况下，货币政策最有效？当：

| | | |
|---|---|---|
| A. | demand for money is infinitely elastic. | 货币需求具有无限弹性。 |
| B. | central bank targets an exchange rate. | 央行设定汇率目标。 |
| C. | risk of inflation is greater than deflation. | 通胀风险大于通缩风险。 |

原答案 / Supplied answer: C

解析：传统政策可通过加息抑制通胀，而通缩时降息可能受有效下限限制。货币需求无限弹性对应流动性陷阱；汇率目标可能限制央行根据国内状况调节政策，所以 C 最佳。

Explanation: Conventional policy can raise rates against inflation, while the effective lower bound can restrict cuts against deflation. Infinitely elastic money demand indicates a liquidity trap; an exchange-rate target can constrain policy responses to domestic conditions. C is therefore best.

易错点：这是给定选项中的相对有效性，不表示通胀越高政策越有效。

Common trap: This is a comparison among the choices, not a claim that higher inflation always improves effectiveness.

## Q17 通胀与通缩的不对称

Inflation-deflation asymmetry

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.17

With respect to conventional monetary policy, combating inflation is most likely:

就传统货币政策而言，抑制通胀最可能：

| | | |
|---|---|---|
| A. | less difficult than combating deflation. | 比抑制通缩更容易。 |
| B. | equally difficult as combating deflation. | 与抑制通缩同样困难。 |
| C. | more difficult than combating deflation. | 比抑制通缩更困难。 |

原答案 / Supplied answer: A

解析：抑制通胀可以加息；应对通缩通常需要降息，但接近有效利率下限时可用空间较小。因此传统政策对通缩更棘手。B、C 忽视了这种不对称。

Explanation: Inflation can be restrained with rate increases. Deflation often calls for cuts, but room is limited near the effective lower bound. That asymmetry makes deflation harder for conventional policy; B and C overlook it.

易错点：应记“降息空间受限”，而非把零当成所有名义利率的绝对下限。

Common trap: Remember constrained room to cut, rather than an absolute zero floor for every nominal rate.

## Q59 流动性陷阱

Liquidity traps

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.59

Which of the following is most likely to limit the effectiveness of monetary policy?

下列哪项最可能限制货币政策的有效性？

| | | |
|---|---|---|
| A. | A liquidity trap | 流动性陷阱。 |
| B. | The crowding out effect | 挤出效应。 |
| C. | A time lag to implement government spending | 实施政府支出的时滞。 |

### 原答案 / Supplied answer: A

解析：流动性陷阱中，增加货币未必继续降低利率或刺激真实活动，货币政策作用受限。挤出效应和政府支出实施时滞是本题对比的财政政策局限。

Explanation: In a liquidity trap, adding money may fail to reduce rates further or stimulate real activity, limiting monetary policy. Crowding out and government-spending implementation lags are the fiscal-policy limitations contrasted in this item.

易错点：liquidity trap 对应货币；政府项目时滞通常对应财政。

Common trap: Associate liquidity traps with monetary policy and public-project lags with fiscal policy.

## Q60 通缩环境下的政策限制

Policy constraints in deflation

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.60

Which of the following is a limitation of monetary policy?

下列哪项是货币政策的局限？

| | | |
|---|---|---|
| A. | The presence of automatic stabilizers in the economy. | 经济中存在自动稳定器。 |
| B. | The ineffectiveness of interest rate adjustments in deflationary environments. | 在通缩环境中，利率调整可能无效。 |
| C. | The uneven distribution of income and wealth among different segments of the population. | 不同人口群体之间收入和财富分配不均。 |

### 原答案 / Supplied answer: B

解析：通缩时名义利率接近有效下限，继续降息可能空间有限、传导较弱，故 B。自动稳定器属于财政制度；分配不均是财政再分配的关注事项，并非这里识别的利率工具局限。

Explanation: During deflation, rates may be near the effective lower bound, limiting further cuts or weakening their transmission. B fits. Automatic stabilizers are fiscal mechanisms, and unequal distribution is a concern of redistribution rather than the rate-tool constraint identified here.

易错点：选项写“无效”，应在本题传统货币政策与通缩限制的语境理解。

Common trap: Read “ineffectiveness” in the context of conventional-policy limits during deflation.

# 05 地缘政治与全球化

## Geopolitics and Globalization

8道原题 / 8 original questions: Q9, Q10, Q13, Q19, Q66, Q72, Q73, Q74

## 先学知识点 / Learn the concepts first

### 01 先看两个轴：全球化程度与合作程度

Start with two axes: globalization and cooperation

题库把国家行为分为四类：自给自足（autarky）是低全球化、低合作；霸权主义（hegemony）是高全球化、低合作；双边主义（bilateralism）是低全球化、较高合作；多边主义（multilateralism）是高全球化、高合作。这是分析用的理想类型，不是给现实国家永久贴标签。双边合作是两国之间逐一达成协议，一国可以同时有多个双边伙伴。

The source uses four archetypes: autarky combines low globalization with low cooperation; hegemony combines high globalization with low cooperation; bilateralism combines low globalization with higher cooperation; multilateralism combines high globalization with high cooperation. These are analytical archetypes, not permanent labels for real countries. Bilateral cooperation consists of agreements between two countries; a country can maintain several separate bilateral relationships.

对应原题 / Related originals: Q10, Q66

### 02 合作机制：集装箱、SWIFT 与监管标准各归哪类

Cooperation mechanisms: containers, SWIFT and regulation

按原解析的分类，监管合作（regulatory cooperation）对应共同监管框架，例如巴塞尔银行监管委员会；流程标准化（process standardization）对应共同流程，例如 SWIFT；运营同步（operational synchronization）对应实际运输和设施之间的兼容，例如统一集装箱尺寸与形状，使陆、海、空、铁路与港口起重机衔接。不要只见到 standards 就机械选 process standardization。

In the source taxonomy, regulatory cooperation concerns joint regulatory frameworks, illustrated by the Basel Committee on Banking Supervision. Process standardization concerns shared processes, illustrated by SWIFT. Operational synchronization concerns compatibility across actual operations and infrastructure, illustrated by uniform containers connecting transport modes and port cranes. The word standards alone does not determine the category.

对应原题 / Related originals: Q9

### 03 全球化：利润机会与分配代价可以同时出现

Globalization: profit opportunities and distributional costs can coexist

全球化扩大商品、资本、人才和信息的跨境流动。企业可通过进入新市场增加销售，或通过劳动力、税务和供应链安排降低成本，因而提高利润。全球化并不保证收入更平均，也不保证 ESG 标准更高。民族主义减弱通常有利于跨境开放；软实力与共同标准本身则有助于交流和合作。

Globalization expands cross-border flows of goods, capital, talent and information. Firms may raise profits by accessing new customers or reducing labor, tax and supply-chain costs. It does not guarantee more equal incomes or stronger ESG standards. Less nationalism generally supports openness, while soft power and shared standards themselves facilitate exchange and cooperation.

对应原题 / Related originals: Q19, Q72

## 04 三类风险：定日期、持续演变、突然冲击

Three risk types: scheduled dates, evolving themes and sudden shocks

事件风险（event risk）围绕预先已知日期，例如选举；主题风险（thematic risk）是随时间演变的持续趋势，例如网络威胁；外生风险（exogenous risk）是突然或未预期的冲击，例如自然灾害。这里的 event risk 是专业分类，不能把日常语言中的所有"事件"都放进去。单次网络攻击也可能很突然，但 Q13 问的是持续存在的 cyber threats。

Event risk centers on dates known in advance, such as elections. Thematic risk evolves over time, such as ongoing cyber threats. Exogenous risk arises from sudden or unanticipated shocks, such as natural disasters. Event risk is a defined category, not a label for everything called an event in everyday language. An individual cyberattack may be sudden, but Q13 asks about the ongoing threat.

对应原题 / Related originals: Q13, Q73

## 05 风险影响速度决定应对层次

The speed of impact guides the level of portfolio response

原解析把短期、高速度冲击与战术性调整联系起来；中期影响可能集中在特定行业；长期、低速度变化则可能影响战略资产配置。Q74 按这一框架将黑天鹅造成的短期波动对应 tactical changes。黑天鹅并非必然只有短期后果，实际持仓决策仍取决于冲击是否改变长期基本面、投资期限和风险承受能力。

The source links short-term, high-velocity shocks to tactical changes, medium-term effects to sector-specific responses, and long-term, low-velocity changes to strategic asset allocation. Q74 applies the tactical response to short-term volatility from a black swan. Black swans do not necessarily have only short-lived effects; an actual response depends on lasting fundamental changes, horizon and risk tolerance.

对应原题 / Related originals: Q74

## 考场触发词 / Exam triggers

优先把两个二维轴和三类风险记清。先做 Q66、Q13、Q73，再用 Q9 检验术语区分；Q74 要按原材料的短期冲击框架回答。

Memorize the two archetype axes and the three risk categories first. Start with Q66, Q13 and Q73, then use Q9 to test terminology. Answer Q74 within the source's short-term-impact framework.

# 用原题检验理解 / Apply the concepts to the originals

## Q10 双边主义

Bilateralism

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.10

A nation that cooperates with a neighboring country is most likely characterized as:

一个与邻国合作的国家，最可能被描述为下列哪一种类型？

| | | |
|---|---|---|
| A. | autarkic. | 自给自足型。 |
| B. | bilateral. | 双边合作型。 |
| C. | hegemonic. | 霸权型。 |

原答案 / Supplied answer: B

解析：题干描述两国之间的合作，因此最符合 bilateralism，选 B。Autarky 强调自给自足和有限的对外往来；hegemony 强调通过政治或经济影响力主导他国。双边主义不表示只能有一个合作伙伴，而是每项协议通常由两国参与。

Explanation: Cooperation between two countries fits bilateralism, B. Autarky emphasizes self-sufficiency and limited external engagement; hegemony emphasizes dominance through political or economic influence. Bilateralism does not limit a country to one partner: each agreement typically involves two countries.

易错点：关键是 two countries；不要把"与很多国家分别合作"误认为每份协议都属于多边。

Common trap: Focus on two countries per relationship; several separate bilateral agreements are still bilateral.

## Q66 全球化与合作二维分类

The globalization-cooperation matrix

题源 Q / PDF p.101（经济学 p.11）| 答源 A / PDF p.66

Which of the following behavioral archetypes best describes a country that is high on the globalization spectrum but low on the cooperation spectrum?

下列哪种行为原型最能描述全球化程度高、但合作程度低的国家？

| | | |
|---|---|---|
| A. | Autarky. | 自给自足主义。 |
| B. | Hegemony. | 霸权主义。 |
| C. | Bilateralism. | 双边主义。 |

原答案 / Supplied answer: B

解析：高全球化说明广泛参与国际经济，低合作说明更倾向以影响力主导而非平等协作，这一组合对应 hegemony，选 B。Autarky 在两个维度都低；bilateralism 在原材料矩阵中是合作较高、全球化较低。多边主义是两个维度都高，但并非本题选项。

Explanation: High globalization indicates broad international engagement, while low cooperation indicates a preference for dominance over cooperative arrangements. This combination is hegemony, B. Autarky is low on both dimensions; bilateralism is higher on cooperation and lower on globalization in the source matrix. Multilateralism is high on both but is not an answer choice here.

易错点：全球参与程度高，不等于合作程度高。

Common trap: Extensive global engagement does not necessarily imply high cooperation.

## Q09 国际合作的三种机制

Three mechanisms of international cooperation

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.9

With respect to geopolitics, setting standards for the size and shape of containers used for shipping is most likely an example of:

就地缘政治而言，为运输所用集装箱的大小和形状制定标准，最可能属于下列哪一类？

| | | |
|---|---|---|
| A. | regulatory cooperation. | 监管合作。 |
| B. | process standardization. | 流程标准化。 |
| C. | operational synchronization. | 运营同步。 |

原答案 / Supplied answer: C

解析：统一集装箱规格使运输方式、港口和起重设备之间能够衔接，因此按原解析属于运营同步，选 C。A 对应监管框架合作，例如巴塞尔委员会；B 对应共同流程，例如 SWIFT。这里按标准服务的具体功能分类。

Explanation: Uniform containers let transport modes, ports and handling equipment work together, so the source classifies them as operational synchronization, C. A concerns regulatory frameworks, illustrated by the Basel Committee; B concerns shared processes, illustrated by SWIFT. Classify the function the standard serves.

易错点：题干虽有 standards，也不能只凭字面选择 standardization。

Common trap: The word standards in the stem does not automatically imply process standardization.

## Q19 全球化的促进与阻碍因素

Drivers and barriers of globalization

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.19

Which of the following would most likely lead to an increase in globalization? A decrease in:

下列哪项的减少最可能促使全球化程度提高？

| | | |
|---|---|---|
| A. | soft power. | 软实力。 |
| B. | nationalism. | 民族主义。 |
| C. | standardization. | 标准化。 |

原答案 / Supplied answer: B

解析：本题中的民族主义强调本国利益优先并可能排斥外国利益，减弱后通常更有利于跨境开放，选 B。软实力通过非强制方式促进影响与交流，共同标准降低跨境协作障碍；这两者减少通常不会成为全球化增强的理由。

Explanation: Nationalism here prioritizes national interests in ways that can exclude foreign interests; less nationalism therefore tends to support openness, B. Soft power facilitates influence and exchange without coercion, while common standards reduce cross-border coordination barriers. Reducing either is not the most likely driver of greater globalization.

易错点：看清问题问的是哪项“减少”，不是哪项增加。

Common trap: The question asks which factor decreases, not which factor increases.

## Q72 全球化的收益与局限

Benefits and limits of globalization

题源 Q / PDF p.102（经济学 p.12）| 答源 A / PDF p.72

Which of the following is most likely a benefit of globalization?

下列哪项最可能是全球化的好处？

| | | |
|---|---|---|
| A. | Increased profits. | 利润增加。 |
| B. | More equal income distribution. | 收入分配更加平等。 |
| C. | Stronger environmental, social, and governance standards. | 环境、社会和治理标准更严格。 |

### 原答案 / Supplied answer: A

解析：企业可以通过扩大海外销售和降低部分经营成本提高利润，因此 A 最符合。全球化的收益可能分配不均，B 并无保证；跨国经营也可能转向较低的当地标准，C 同样并非必然。答案是可能的企业收益，不是所有企业一定获利。

Explanation: Access to foreign customers and lower operating costs can raise corporate profits, making A the best answer. Benefits may be distributed unevenly, so B is not assured. Firms may also operate under lower local standards, so C is not guaranteed. This is a potential benefit, not a claim that every firm gains.

易错点：企业利润、收入分配与 ESG 标准是三个不同维度。

Common trap: Corporate profits, income distribution and ESG standards are separate dimensions.

## Q13 主题风险

Thematic risk

题源 Q / PDF p.92（经济学 p.2）| 答源 A / PDF p.13

Cyber threats most likely fall into the category of

网络威胁最可能属于下列哪类风险？

| | | |
|---|---|---|
| A. | event risk. | 事件风险。 |
| B. | thematic risk. | 主题风险。 |
| C. | exogenous risk. | 外生风险。 |

### 原答案 / Supplied answer: B

解析：Cyber threats 指持续存在并随时间演变的网络安全威胁，原材料把它归为 thematic risk，选 B。事件风险围绕预先已知的日期；外生风险强调突然、未预期的冲击。本题问的是威胁主题，而非指定的一次突发攻击。

Explanation: Cyber threats refer to an ongoing security issue that evolves over time, so the source classifies them as thematic risk, B. Event risk centers on dates known in advance; exogenous risk concerns sudden, unanticipated shocks. The stem asks about the persistent threat rather than a specified surprise attack.

易错点：风险主题与某次具体事件的发生方式，是不同分类层次。

Common trap: An ongoing risk theme and the timing of an individual incident are different levels of classification.

## Q73 外生风险

Exogenous risk

题源 Q / PDF p.102（经济学 p.12）| 答源 A / PDF p.73

Natural disasters are an example of:

自然灾害属于下列哪类风险的例子？

| | | |
|---|---|---|
| A. | event risk. | 事件风险。 |
| B. | thematic risk. | 主题风险。 |
| C. | exogenous risk. | 外生风险。 |

原答案 / Supplied answer: C

解析：原材料把自然灾害的突发冲击归为 exogenous risk，选 C。Event risk 围绕已知日期，例如选举；thematic risk 是长期演变的主题，例如气候变化。自然灾害冲击与气候变化主题在该框架中应分别识别。

Explanation: The source treats the sudden impact of natural disasters as exogenous risk, C. Event risk concerns known dates such as elections, while thematic risk concerns evolving themes such as climate change. Distinguish the disaster shock from the broader climate theme within this framework.

易错点：日常语言说"灾害事件"，不代表考试分类就是 event risk。

Common trap: Calling a disaster an event in everyday language does not make it event risk in this taxonomy.

## Q74 冲击速度与战术调整

Impact velocity and tactical adjustments

题源 Q / PDF p.103（经济学 p.13）| 答源 A / PDF p.74

Which of the following changes are investors most likely to make in response to a black swan risk?

投资者最可能作出下列哪种调整，以应对黑天鹅风险？

| | | |
|---|---|---|
| A. | Tactical. | 战术性调整。 |
| B. | Sector specific. | 针对特定行业的调整。 |
| C. | Asset allocation. | 资产配置调整。 |

原答案 / Supplied answer: A

解析：原解析将黑天鹅放在短期、高速度的市场波动框架下，因此对应战术性调整，选 A。B 对应中期、行业集中的影响；C 对应长期资产类别和风格配置变化。此答案依赖原材料的时间尺度假设，不能推广成所有黑天鹅都不影响长期配置。

Explanation: The source places black swans within short-term, high-velocity market volatility, which it links to tactical adjustments, A. B corresponds to medium-term sector effects, and C to longer-term changes in asset-class and style allocation. The answer relies on the source's horizon assumption; it does not imply that all black swans leave long-term allocation unaffected.

易错点：按原解析的冲击期限作答，不把"罕见、重大"机械等同于必须永久改变资产配置。

Common trap: Use the source's impact horizon; rare and consequential does not automatically mean a permanent allocation change.

# 06 国际贸易与国际机构

## International Trade and International Institutions

7道原题 / 7 original questions: Q20, Q29, Q44, Q48, Q51, Q61, Q65

## 先学知识点 / Learn the concepts first

### 01 三大机构：支付体系、发展减贫、贸易规则

Three institutions: payments, development and trade rules

本组题的识别词是：IMF（国际货币基金组织）对应汇率稳定和国际支付体系；World Bank（世界银行）对应发展、减贫与环境上可持续的增长；WTO（世界贸易组织）对应多边贸易的法律和制度基础。IBRD 虽然名称包含“重建”，重点仍是重建与发展融资；看到 international payment system 应选 IMF。

Use these source keywords: the IMF supports exchange-rate stability and the international payments system; the World Bank supports development, poverty reduction and environmentally sound growth; the WTO provides the legal and institutional basis of multilateral trade. Although IBRD includes reconstruction in its name, its focus is reconstruction and development financing. International payment system points to the IMF.

对应原题 / Related originals: Q20, Q61

### 02 自由贸易：总收益不代表每个人都受益

Free trade: aggregate gains do not imply gains for everyone

贸易可扩大市场、带来规模经济和知识传播，从而降低平均生产成本、提高生产率。但进口竞争会损害部分企业和劳动者，收益分配可能不均。因此“总体效率提高”与“收入差距可能扩大”可以同时成立。题目问反对自由贸易的理由时，要区分分配问题与总量效率问题。

Trade can expand markets, create scale economies and spread knowledge, lowering average costs and raising productivity. Import competition can nevertheless hurt some firms and workers, and gains may be unevenly distributed. Higher aggregate efficiency can coexist with greater income inequality. Distinguish distributional objections from claims about aggregate efficiency.

对应原题 / Related originals: Q44

### 03 小国关税与出口补贴：先追踪国内价格

Small-country tariffs and export subsidies: follow the domestic price

小国是国际市场价格接受者。进口关税使国内进口价格上升：消费者受损、本地生产者获益、政府取得关税收入，但净福利出现无谓损失。出口补贴提高出口商每单位出口所得，使其愿意把销售转向国外，国内价格也会上升；国内消费下降，政府付出补贴，国家净福利下降。两者都不能仅因生产者获益就判断全国获益。

A small country takes the world price as given. An import tariff raises the domestic import price: consumers lose, local producers gain, and the government receives revenue, but national welfare suffers a deadweight loss. An export subsidy raises exporters' proceeds and redirects sales abroad, also raising the domestic price; domestic consumption falls, the government pays the subsidy, and national welfare falls. Producer gains alone do not imply a national gain.

Small-country export subsidy: domestic price = world price + subsidy per unit.

对应原题 / Related originals: Q29, Q51

## 04 贸易集团逐层增加承诺

Trading blocs add progressively deeper commitments

按本题框架，自由贸易区取消成员间贸易壁垒；关税同盟进一步采用共同对外关税；共同市场再允许劳动力和资本等生产要素自由流动；经济联盟进一步协调经济政策并建立共同经济机构；货币联盟再采用共同货币。因此 common market 包含 customs union 的全部内容，却不必已经具备共同货币。

In this framework, a free-trade area removes barriers among members; a customs union adds a common external tariff; a common market adds free movement of production factors such as labor and capital; an economic union adds policy coordination and common institutions; a monetary union adds a common currency. A common market therefore contains the features of a customs union without requiring a common currency.

对应原题 / Related originals: Q48

## 05 贸易余额：私人储蓄余额加政府余额

Trade balance: private saving balance plus government balance

本题使用简化国民收入恒等式：净出口等于私人储蓄减投资，再加财政余额。S 为私人储蓄，T 为扣除转移支付后的税收，G 为政府购买。财政盈余 T-G 为正，私人储蓄超过投资 S-I 也为正，两项相加必为正，所以出口大于进口。这是会计关系，不是单向因果定律；若显式计入净海外收入和转移，通常以经常账户而不只净出口对应全国储蓄减投资。

The question uses a simplified national-income identity: net exports equal private saving minus investment plus the fiscal balance. S is private saving, T is taxes net of transfers, and G is government purchases. A positive fiscal balance and positive private saving-investment balance imply positive net exports. This is an accounting relationship, not a one-way causal law. With explicit net foreign income and transfers, national saving minus investment generally corresponds to the current account rather than net exports alone.

$$NX = X - M = (S - I) + (T - G)$$

对应原题 / Related originals: Q65

## 考场触发词 / Exam triggers

先用 Q20、Q61 固定机构职责；再成对练 Q29、Q51，分别追踪消费者、生产者、政府和全国福利；最后用 Q48、Q65 检验层级与恒等式。

Use Q20 and Q61 to anchor institutional roles. Pair Q29 with Q51 and trace consumers, producers, the government and national welfare separately. Finish with Q48 and Q65 to test integration levels and the accounting identity.

# 用原题检验理解 / Apply the concepts to the originals

## Q20 IMF 与国际支付体系

The IMF and the international payments system

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.20

Which of the following organizations was founded with the goal of assisting in the reconstruction of the international payment system?

下列哪个组织成立时，以协助重建国际支付体系为目标？

| | | |
|---|---|---|
| A. | The World Trade Organization. | 世界贸易组织。 |
| B. | The International Monetary Fund. | 国际货币基金组织。 |
| C. | The International Bank for Reconstruction and Development. | 国际复兴开发银行。 |

### 原答案 / Supplied answer: B

解析：题干的识别词是 international payment system，对应 IMF，选 B。WTO 对应国际贸易规则；IBRD 属世界银行体系，支持重建与发展融资。不要只看到 reconstruction 就被 C 的机构名称吸引。

Explanation: International payment system is the key phrase: it points to the IMF, B. The WTO concerns international trade rules, while IBRD belongs to the World Bank framework and supports reconstruction and development financing. The word reconstruction alone should not lead to C.

易错点：分清"重建支付体系"与"重建和发展融资"。

Common trap: Distinguish rebuilding the payments system from reconstruction and development financing.

---

## Q61 世界银行的主要目标

The World Bank's main objective

题源 Q / PDF p.100（经济学 p.10）| 答源 A / PDF p.61

The main objective of the World Bank Group is to:

世界银行集团的主要目标是：

| | | |
|---|---|---|
| A. | support exchange rate stability and an open system of international payments. | 支持汇率稳定和开放的国际支付体系。 |
| B. | provide the legal and institutional foundation of the multinational trading system. | 为多边贸易体系提供法律和制度基础。 |
| C. | help developing countries fight poverty and enhance environmentally sound economic growth. | 帮助发展中国家减少贫困，并促进符合环境要求的经济增长。 |

### 原答案 / Supplied answer: C

解析：发展、减贫及环境上可持续的增长对应世界银行，选 C。A 是 IMF 的典型职责；B 对应 WTO。把本题与 Q20 配对记忆，可以一次排清三家机构。

Explanation: Development, poverty reduction and environmentally sound growth identify the World Bank, C. A describes the IMF's role, while B describes the WTO. Pairing this item with Q20 separates the responsibilities of all three institutions.

易错点：都属于国际机构，但目标词不同：payments、development、trade rules。

Common trap: The organizations differ by their key objective: payments, development or trade rules.

---

## Q44 自由贸易的分配影响

Distributional effects of free trade

题源 Q / PDF p.97（经济学 p.7）| 答源 A / PDF p.44

An argument against free trade is that:

反对自由贸易的一项论据是：

| | | |
|---|---|---|
| A. | it has the potential to lead to greater income inequality. | 自由贸易可能加剧收入不平等。 |
| B. | it increases average production costs in goods and services. | 自由贸易提高商品和服务的平均生产成本。 |
| C. | it discourages foreign research and development in an economy | 自由贸易抑制一国经济中的外国研究与开发活动。 |

### 原答案 / Supplied answer: A

解析：自由贸易可能使部分群体受益、部分受损，因而扩大收入差距，A 是常见反对理由。B 与更大市场带来的规模经济相反；C 与知识、技术和研发成果跨境传播的通常收益相反。总福利有改善空间，不代表所有人的收入都提高。

Explanation: Trade can benefit some groups while hurting others and may widen income inequality, making A a common objection. B runs against the scale economies available from a larger market. C runs against the usual benefits of cross-border knowledge, technology and R&D spillovers. Potential aggregate gains do not mean that everyone's income rises.

易错点：区分总量收益与分配结果；“可能”不等于“一定”。

Common trap: Separate aggregate gains from distribution, and distinguish possibility from certainty.

---

## Q29 小国出口补贴

Export subsidies in a small country

题源 Q / PDF p.95（经济学 p.5）| 答源 A / PDF p.29

The implementation of an export subsidy for a normal good produced in a small country will most likely increase the:

一个小国对其生产的正常商品实施出口补贴，最可能使下列哪项增加？

| | | |
|---|---|---|
| A. | domestic consumption of the good. | 该商品的国内消费量。 |
| B. | price of the good in the domestic market. | 该商品在国内市场的价格。 |
| C. | national welfare of the country providing the subsidy. | 提供补贴国家的国民福利。 |

### 原答案 / Supplied answer: B

解析：出口商出口一单位可取得世界价格加补贴，因此将销售转向国外；国内买家必须支付更高价格才能留住商品。在小国模型中，国内价格上升至世界价格加单位补贴，所以 B。国内消费下降，A 错；政府补贴成本与扭曲造成净福利损失，C 错。

Explanation: Exporters receive the world price plus the subsidy for each unit exported and redirect sales abroad. Domestic buyers must pay more to retain supply. In the small-country model, the domestic price rises to the world price plus the per-unit subsidy, so B is correct. Domestic consumption falls, rejecting A, while subsidy costs and distortions reduce national welfare, rejecting C.

Domestic price = World price + Export subsidy per unit

易错点：补贴给出口商不代表国内消费者买得更便宜。

Common trap: A subsidy paid to exporters does not mean lower prices for domestic consumers.

---

## Q51 小国进口关税的福利影响

Welfare effects of an import tariff in a small country

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.51

When a country that is a price taker imposes a tariff on an imported good:

当一个作为价格接受者的国家对某种进口商品征收关税时：

| | | |
|---|---|---|
| A. | national welfare increases. | 国民福利增加。 |
| B. | consumers gain consumer surplus. | 消费者获得更多消费者剩余。 |
| C. | local producers gain producer surplus. | 本地生产者获得更多生产者剩余。 |

### 原答案 / Supplied answer: C

解析：小国无法改变世界价格，关税提高国内价格，保护本地生产者，因此生产者剩余增加，选 C。消费者支付更高价格，消费者剩余下降，B 错；即使计入政府关税收入，消费和生产扭曲仍带来无谓损失，A 错。

Explanation: A price-taking country cannot alter the world price. The tariff raises the domestic price and benefits local producers, increasing producer surplus, C. Consumers pay more and lose surplus, rejecting B. Even after government tariff revenue is included, production and consumption distortions cause a deadweight loss, rejecting A.

易错点：本地生产者获益只是福利转移的一部分，不能代表全国净福利上升。

Common trap: Local producer gains are only one component of welfare and do not establish a national net gain.

---

## Q48 共同市场与贸易整合层级

Common markets and integration levels

题源 Q / PDF p.98（经济学 p.8）| 答源 A / PDF p.48

With respect to trading blocs, a common market most likely incorporates all aspects of a(n):

就贸易集团而言，共同市场最可能包含下列哪一种安排的全部内容？

| | | |
|---|---|---|
| A. | customs union. | 关税同盟。 |
| B. | monetary union. | 货币联盟。 |
| C. | economic union. | 经济联盟。 |

### 原答案 / Supplied answer: A

解析：共同市场是在关税同盟基础上，进一步允许生产要素自由流动，所以包含 A 的全部内容。经济联盟还要求共同经济机构和政策协调；货币联盟还采用共同货币，均比本题的共同市场承诺更深。

Explanation: A common market adds free movement of factors of production to a customs union, so it incorporates all customs-union features, A. An economic union adds common institutions and policy coordination; a monetary union adds a common currency. Both go beyond the common-market commitments in this framework.

Common market = Customs union + Free movement of factors of production

易错点：方向是高层级包含低层级，而非低层级已经具备高层级全部内容。

Common trap: The higher integration level incorporates the lower one, not the other way around.

---

## Q65 储蓄、财政余额与贸易余额

Saving, fiscal balances and the trade balance

题源 Q / PDF p.101（经济学 p.11） | 答源 A / PDF p.65

When a country has a fiscal surplus and an excess of private saving over investment, its exports are:

当一个国家存在财政盈余，且私人储蓄超过投资时，该国出口额：

| | | |
|---|---|---|
| A. | less than its imports. | 小于进口额。 |
| B. | equal to its imports. | 等于进口额。 |
| C. | greater than its imports. | 大于进口额。 |

原答案 / Supplied answer: C

解析：由原题使用的恒等式 X-M=(S-I)+(T-G)，财政盈余意味着 T-G>0，私人储蓄超过投资意味着 S-I>0。两项之和为正，故 X-M>0，即出口大于进口，选 C。这里 S 是私人储蓄，不能再把政府储蓄重复计入。

Explanation: Using the source identity X-M=(S-I)+(T-G), a fiscal surplus implies T-G>0 and excess private saving implies S-I>0. Their sum is positive, so exports exceed imports, C. S denotes private saving; do not include government saving in S and then add it again.

$$X - M = (S - I) + (T - G) > 0$$

易错点：本题两个余额均为正；若一正一负，必须比较大小，不能只看其中一项。

Common trap: Both balances are positive here. If their signs differ, their magnitudes must be compared.

# 07 汇率制度与汇率的含义

## Exchange Rate Regimes and Exchange Rate Concepts

5道原题 / 5 original questions: Q6, Q34, Q43, Q52, Q71

## 先学知识点 / Learn the concepts first

### 01 先读报价：每 1 单位谁，值多少谁？

Read the quote as units of price currency per one base currency

本讲义完全遵循原题的定义。S(P/B) 表示每 1 单位基础货币 B，可换多少报价货币 P。S 上升表示 B 相对 P 升值；S 下降表示 B 相对 P 贬值。不要只凭交易平台的货币对写法猜方向。名义汇率是货币之间的兑换比例；实际汇率还调整两国物价，比较商品篮子的相对价格。

Follow the explicit definition in each original question. S(P/B) is units of price currency P per one unit of base currency B. A rise in S means B appreciates against P; a fall means B depreciates. Do not infer the direction solely from a trading-platform label. A nominal rate exchanges currencies; a real rate also adjusts for the two countries' price levels to compare baskets of goods.

$$\text{Real } q(P/B) = S(P/B) \times \text{PriceIndex}(B) / \text{PriceIndex}(P)$$

对应原题 / Related originals: Q43, Q71

### 02 货币局与美元化：是否仍有本国货币？

Currency board versus dollarization: is there a domestic currency?

货币局保留本币，并承诺按固定汇率兑锚定外币，发行受到储备支持和规则约束；汇率不能自由调整时，国内工资与物价越灵活，越能吸收冲击。美元化是直接使用另一国货币作为交换媒介。货币联盟则由成员共同采用同一货币，不能与前两者混为一谈。

A currency board retains a domestic currency and commits to conversion into an anchor currency at a fixed rate, subject to reserve backing and rules. Flexible domestic wages and prices help absorb shocks when the exchange rate cannot adjust. Dollarization uses another country's currency as a medium of exchange. A monetary union shares a currency among its members and is a separate arrangement.

对应原题 / Related originals: Q6, Q34

### 03 理想汇率制度与“不可能三角”

An ideal currency regime and the policy trilemma

理想制度希望货币可自由兑换、汇率稳定，同时各国可追求独立货币政策；但固定汇率、资本自由流动、独立货币政策通常无法同时完全实现。第 52 题问理想特征而非现实中哪种制度最好，三项选项中应选货币完全可兑换。

An ideal regime would offer convertibility, exchange-rate stability, and domestic monetary-policy independence. In practice, a fixed rate, free capital movement, and fully independent monetary policy generally cannot all be maintained together. Q52 asks about a desirable feature, rather than which actual regime is universally best; full currency convertibility is the relevant choice.

对应原题 / Related originals: Q52

## 04 名义与实际：利率用于远期，物价用于实际汇率

Interest rates price forwards; price levels convert nominal into real rates

把名义汇率转成实际汇率，要两国物价水平，不要两国 GDP，也不要把利率差代入。购买力平价是一个基准关系；名义汇率可能偏离这个基准。实际汇率可用于理解相对竞争力，但并不因此保证恒定或等于 1。

Converting a nominal rate into a real rate requires the two countries' price levels, not their GDP or interest rates. Purchasing power parity is a benchmark relationship from which nominal rates may deviate. Real rates help interpret relative competitiveness, but are not thereby guaranteed to be constant or equal to one.

对应原题 / Related originals: Q43, Q71

## 考场触发词 / Exam triggers

题干出现 prices / inflation，想实际汇率；出现 interest rates / arbitrage，想远期汇率；出现 another nation's currency，想美元化。

Prices or inflation point to real rates; interest rates or arbitrage point to forwards; another nation's currency points to dollarization.

# 用原题检验理解 / Apply the concepts to the originals

## Q43 名义与实际汇率的区别

Nominal versus real exchange rates

题源 Q / PDF p.97（经济学 p.7） | 答源 A / PDF p.43

In contrast to real exchange rates, nominal foreign exchange rates:

与实际汇率相比，名义外汇汇率：

| | | |
|---|---|---|
| A. | tend to deviate from purchasing power parity. | 往往偏离购买力平价。 |
| B. | represent the relative price levels in the domestic and foreign countries. | 反映本国与外国的相对物价水平。 |
| C. | are indexes useful for understanding international trade and capital flows. | 是有助于理解国际贸易和资本流动的指数。 |

### 原答案 / Supplied answer: A

解析：原答案选 A：名义汇率是直接货币兑换价格，可能偏离购买力平价；B、C 描述的是实际汇率经相对物价调整后的解释用途。不要反过来推论实际汇率必定满足购买力平价，或名义汇率对贸易与资本流动毫无信息价值。

Explanation: The supplied answer is A: a nominal rate is a currency exchange price and may deviate from purchasing power parity. B and C describe the relative-price adjustment and interpretive use emphasized for real exchange-rate measures. This does not imply real rates necessarily satisfy PPP or nominal rates contain no useful trade or capital-flow information.

易错点：区分“本题最佳答案”与“只有某一种汇率才有用”的过度结论。

Common trap: Distinguish the best answer in this question from an excessive claim that only one type of exchange rate is useful.

原资料核对 / **Source review**

原题对名义与实际汇率的对比措辞较简化；实际汇率可以变化，购买力平价不被保证成立。

The source uses a simplified nominal-versus-real contrast. Real rates may change, and PPP is not guaranteed to hold.

---

## Q71 实际汇率需要的输入

Inputs needed for a real exchange rate

题源 Q / PDF p.102（经济学 p.12） | 答源 A / PDF p.71

The conversion of nominal exchange rates into real exchange rates requires the:

把名义汇率转换为实际汇率，需要：

| | | |
|---|---|---|
| A. | GDP of both countries. | 两国 GDP。 |
| B. | price levels in both countries. | 两国物价水平。 |
| C. | interest rates in both countries. | 两国利率。 |

### 原答案 / Supplied answer: B

解析：实际汇率以两国物价水平调整名义汇率，以衡量相对商品价格，故 B 正确。GDP 不是这个转换公式的输入；利率差用于远期汇率的无套利定价，不是名义转实际的调整因素。

Explanation: A real exchange rate adjusts the nominal rate using the two countries' price levels to measure relative goods prices, so B is correct. GDP is not an input to this conversion. Interest differentials price forward exchange rates through arbitrage, not the nominal-to-real adjustment.

易错点：物价决定实际调整，利率决定远期定价：两套公式分开。

Common trap: Separate the formulas: prices for the real-rate adjustment, interest rates for forward pricing.

---

## Q06 货币局的调整条件

Adjustment under a currency board

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.6

Which of the following economic conditions for a country best supports a well-functioning currency board exchange rate system?

以下哪项经济条件最有利于一个国家的货币局汇率制度良好运作？

| | | |
|---|---|---|
| A. | Flexible domestic prices and wages. | 国内物价和工资具有灵活性。 |
| B. | Rapid growth in supply of the global reserve asset. | 全球储备资产供给快速增长。 |
| C. | Large non-traded sectors of the domestic economy. | 国内经济中的非贸易部门规模较大。 |

### 原答案 / Supplied answer: A

解析：货币局维持固定兑换承诺，无法自由靠汇率吸收冲击。工资和物价灵活有助于恢复竞争力与供求平衡，A最恰当。原解析列举的其他有利条件是储备资产供给缓慢、稳定增长及非贸易部门较小；B、C正好与之相反。

Explanation: A currency board maintains a fixed conversion commitment and cannot freely use the exchange rate to absorb shocks. Flexible wages and prices support adjustment in competitiveness and supply-demand balance, giving A. The supplied solution also lists slow, steady growth in reserve-asset supply and a small non-traded sector as supportive conditions; B and C state the opposite.

易错点：固定汇率不等于经济无须调整；调整转移到国内价格与工资。

Common trap: A fixed exchange rate does not eliminate adjustment; it shifts adjustment toward domestic prices and wages.

## Q34 美元化

Dollarization

题源 Q / PDF p.96（经济学 p.6）| 答源 A / PDF p.34

Dollarization is best described as an exchange rate regime whereby a country:

美元化最恰当地描述了以下哪种汇率制度？一个国家：

| | | |
|---|---|---|
| A. | uses the currency of another nation as its medium of exchange. | 使用另一国家的货币作为交换媒介。 |
| B. | participates in a monetary union whose members share the same legal tender. | 参加成员共享同一法定货币的货币联盟。 |
| C. | makes a commitment to exchange domestic currency for a specified foreign currency at a fixed exchange rate. | 承诺按固定汇率把本币兑换为某种指定外币。 |

### 原答案 / Supplied answer: A

解析：美元化的关键是直接采用另一国货币，A 符合定义，名称并不意味着只能使用美元。B 描述货币联盟；C 描述本币对外币固定兑换的安排，可对应货币局的核心承诺，而不是直接使用另一国货币。

Explanation: The defining feature is using another nation's currency, so A is correct; the generic term is not restricted to use of the US dollar. B describes a monetary union. C describes a fixed conversion commitment for a domestic currency, central to a currency-board arrangement, rather than direct use of the foreign currency.

易错点：问自己：本币还在吗？直接用外币才是这里的美元化。

Common trap: Ask whether a domestic currency remains: direct use of a foreign currency is the key here.

## Q52 理想货币制度的特征

A desirable feature of an international currency regime

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.52

An ideal international currency regime would most likely have:

一个理想的国际货币制度最可能具有以下哪项特征？

| | | |
|---|---|---|
| A. | currencies that are fully convertible. | 货币完全可兑换。 |
| B. | floating exchange rates between currencies. | 货币之间采取浮动汇率。 |
| C. | a common monetary policy across different countries. | 不同国家实行共同货币政策。 |

### 原答案 / Supplied answer: A

解析：完全可兑换有利于跨境交易及资本流动，是理想制度的特征，A 最恰当。题目所列理想目标通常还包括汇率稳定与政策自主，因此 B 的浮动汇率、C 的共同货币政策并非对应理想特征；现实中需在政策目标之间取舍。

Explanation: Full convertibility facilitates cross-border transactions and capital movements and is the appropriate desirable feature, so A. The ideal set of objectives also usually includes exchange-rate stability and monetary autonomy; floating rates in B and a common monetary policy in C are not the features sought here. Actual regimes must make trade-offs.

易错点："理想特征"不等于全部目标在现实中可同时完全实现。

Common trap: A desirable ideal feature does not mean every objective can be fully achieved simultaneously.

# 08 汇率计算：交叉、远期与实际汇率

## Exchange Rate Calculations: Cross Rates, Forwards, and Real Rates

9道原题 / 9 original questions: Q4, Q18, Q40, Q41, Q45, Q46, Q49, Q54, Q63

## 先学知识点 / Learn the concepts first

### 01 交叉汇率：把货币当作单位约掉

Cross rates: cancel currency units

目标先写成"所需货币 / 基础货币"。两条报价若分母相同，用相除消去共同货币。第 41 题要 EUR/GBP，所以用 (USD/GBP) ÷ (USD/EUR)。第 40 题要 JPY/CAD，所以用 (JPY/USD) ÷ (CAD/USD)。先把两个时点的交叉汇率各算一次，再求百分比变化。

First write the target as required currency divided by base currency. If two quotes share a denominator, divide them to cancel the common currency. Q41 needs EUR/GBP, so divide USD/GBP by USD/EUR. Q40 needs JPY/CAD, so divide JPY/USD by CAD/USD. Calculate the cross rate at each date before calculating the percentage change.

EUR/GBP = (USD/GBP) / (USD/EUR); change = (S_end / S_start - 1) × 100%

对应原题 / Related originals: Q40, Q41

### 02 远期汇率：上面放报价货币利率

Forward pricing: price-currency interest rate goes in the numerator

在可进行覆盖套利、忽略交易成本等摩擦的假设下，远期汇率由即期汇率和两币种同期限无风险利率决定。S(P/B) 的分子放报价货币 P 的利率，分母放基础货币 B 的利率。第 4 题每 1 AUD 报多少 USD，所以 USD 利率在上，AUD 利率在下。

With covered arbitrage available and frictions such as transaction costs ignored, the forward rate is set by spot and the two currencies' matching-maturity risk-free rates. For S(P/B), put the price-currency P rate in the numerator and the base-currency B rate in the denominator. In Q4, the quote is USD per AUD, so USD interest is on top and AUD interest is below.

F(P/B) = S(P/B) × (1 + r_P × T) / (1 + r_B × T)

对应原题 / Related originals: Q4, Q18, Q49

### 03 远期升贴水不是未来即期汇率预测

A forward premium or discount is not a guaranteed spot forecast

同样报价方向下，基础货币利率越高，远期报价越低，基础货币呈远期贴水；报价货币利率越高，远期报价越高。该关系是无套利定价，不保证未来即期汇率同方向变化。第49题原解析采用"外币/本币"，本币在分母，所以本国利率上升使远期报价下降，原答案为C。

Keeping the quote direction fixed, a higher base-currency rate lowers the forward quote, placing the base currency at a forward discount; a higher price-currency rate raises it. This is arbitrage pricing, not a guarantee about future spot. Q49's supplied solution uses foreign per domestic, so the domestic rate is in the denominator: a rise lowers the forward quote, giving the original answer C.

对应原题 / Related originals: Q18, Q49

## 04 远期点数：先确认小数位

Forward points: identify the point scale

原题第 54、63 题使用四位小数报价的点数惯例：1 点 = 0.0001。已知即期与远期，先相减再乘 10,000；已知点数，除以 10,000 后加到即期。负点数表示这个报价的远期低于即期，不是把即期直接减 16。不同货币和报价惯例可能采用不同点值，不要把 10,000 无条件用于所有市场。

Q54 and Q63 use the four-decimal quote convention: one point equals 0.0001. Given spot and forward, subtract and multiply by 10,000. Given points, divide by 10,000 and add to spot. Negative points mean a lower forward quote, not subtracting 16 directly from spot. Other currency and quoting conventions may use a different point size.

Points = (F - S) × 10,000; F = S + Points / 10,000

对应原题 / Related originals: Q54, Q63

## 05 实际汇率：一套方向，一次到底

Real exchange rates: keep one quotation direction throughout

仍沿用"P每B"的报价。实际汇率q=S×B国物价/P国物价，变化因子等于名义变化因子×B国通胀因子/P国通胀因子。第46题USD/EUR中欧元是基础货币，所以欧元区物价在上。第45题的题干和原解析报价方向不一致：原答案为5%，按题干本币实际升值的通常定义则约7%；应学习方向推导，并把该题列为待确认。

Keep the P-per-B quotation. The real rate is q=S×the B-country price level/P-country price level, so its change factor equals the nominal factor times the B-country inflation factor divided by the P-country inflation factor. EUR is the base in Q46 USD/EUR, so Eurozone prices go on top. Q45 has a quotation inconsistency between stem and solution: its supplied answer is 5%, while the usual literal domestic-appreciation interpretation gives about 7%. Learn the directional derivation and flag this item for clarification.

q_1 / q_0 = (S_1 / S_0) × (1 + inflation_B) / (1 + inflation_P)

对应原题 / Related originals: Q45, Q46

## 06 近似检查：先看数量级，再精算

Use a quick approximation as a reasonableness check

变化较小时，同方向的实际汇率变化约等于名义变化，加基础货币国通胀、减报价货币国通胀。第46题约为-4%+6%-2%=0%。第45题原答案算6%+2%-3%=5%，但按"本币升值"字面、外币/本币报价则是6%+3%-2%=7%。两者使用不同方向，不能在同一题里无说明地互换。

For small changes, real-rate change is approximately nominal change in the same direction, plus base-country inflation, minus price-country inflation. Q46 is about -4%+6%-2%=0%. Q45's supplied solution calculates 6%+2%-3%=5%; the literal domestic-appreciation interpretation, quoted foreign per domestic, gives 6%+3%-2%=7%. These use different directions and must not be silently interchanged.

Approx. real change = nominal change + inflation_B - inflation_P

对应原题 / Related originals: Q45, Q46

## 考场触发词 / Exam triggers

计算顺序：写单位 → 定方向 → 列公式 → 代原题数字 → 检查升贴水或正负号。

Calculation order: write units, fix direction, state the formula, insert the original figures, and check the premium/discount or sign.

# 用原题检验理解 / Apply the concepts to the originals

## Q40 交叉汇率的百分比变化

Percentage change in a cross rate

题源 Q / PDF p.97（经济学 p.7）| 答源 A / PDF p.40

An analyst gathers the following foreign exchange rate information:

| | CAD/USD | JPY/USD |
|---|---|---|
| Beginning of period | 1.3216 | 105.42 |
| | 1.2944 | 104.74 |

CAD/USD is the amount of CAD per 1 USD. JPYIUSD is the amount of JPY per 1 USD. The percentage change in the JPY/CAD cross-rate for the period is closest to:

分析师收集到以下汇率资料。期初：CAD/USD = 1.3216，JPY/USD = 105.42；第二行：CAD/USD = 1.2944，JPY/USD = 104.74（原表未标示该行时点）。CAD/USD 为每 1 USD 对应的 CAD 金额；原文"JPYIUSD"说明为每 1 USD 对应的 JPY 金额。该期间 JPY/CAD 交叉汇率的百分比变化最接近：

| | | |
|---|---|---|
| A. | -2.7%. | -2.7%。 |
| B. | 1.4%. | 1.4%。 |
| C. | 2.8%. | 2.8%。 |

原答案 / Supplied answer: B

解析：按答案文档的口径，把第二行作为期末。期初 JPY/CAD = 105.42 / 1.3216 = 79.76695；期末 = 104.74 / 1.2944 = 80.91780。变化 = 80.91780 / 79.76695 - 1 = 1.4428%，选 B。A、C 不是目标交叉汇率的正确比率变化。

Explanation: Following the supplied solution, interpret the second row as the end of the period. Initially JPY/CAD = 105.42 / 1.3216 = 79.76695; finally it is 104.74 / 1.2944 = 80.91780. The change is 80.91780 / 79.76695 - 1 = 1.4428%, giving B. A and C are not the correct proportional change in the requested cross rate.

$$S_{start}(JPY/CAD) = 105.42 / 1.3216 = 79.76695$$

$$S_{end}(JPY/CAD) = 104.74 / 1.2944 = 80.91780$$

$$\text{Change} = (80.91780 / 79.76695 - 1) \times 100\% = 1.4428\%$$

易错点：不能直接相减两个原报价的变化率来替代精确交叉汇率计算。

Common trap: Do not substitute the difference of the two original quote changes for the exact cross-rate calculation.

原资料核对 / **Source review**

原表第二行的时点标签缺失，且原文印为"JPYIUSD"。英文原题保留这些特征；仅解析依据答案文档采用期末及 JPY/USD 的解释。

The second-row time label is missing, and the source prints JPYIUSD. These features are preserved in the English original; only the explanation interprets the row as period-end and the quote as JPY/USD, following the supplied solution.

## Q41 交叉汇率的单位消去

Cancelling units in cross rates

题源 Q / PDF p.97（经济学 p.7） | 答源 A / PDF p.41

An analyst gathers the following information about spot rates:

| | | |
|---|---|---|
| | USD/GBP | 1.2604 |
| Beginning of period | USD/EUR | 1.1786 |

USD/GBP is the amount of USD per 1 GBP. USD/EUR is the amount of USD per 1 EUR. The spot EUR/GBP cross rate is closest to:

分析师收集到以下即期汇率：USD/GBP = 1.2604；USD/EUR = 1.1786。原表第二行另有“期初 / Beginning of period”字样。USD/GBP 为每 1 GBP 对应的 USD 金额；USD/EUR 为每 1 EUR 对应的 USD 金额。即期 EUR/GBP 交叉汇率最接近：

| | | |
|---|---|---|
| A. | 0.9351. | 0.9351。 |
| B. | 1.0694. | 1.0694。 |
| C. | 1.4855. | 1.4855。 |

原答案 / Supplied answer: B

解析：目标为 EUR/GBP，故 (USD/GBP) / (USD/EUR) = EUR/GBP。代入 1.2604 / 1.1786 = 1.069404，选 B。A 是倒数方向；C 是两个报价相乘，货币单位无法消成题目要求。

Explanation: The target is EUR/GBP. Dividing USD/GBP by USD/EUR cancels USD and gives EUR/GBP. Thus 1.2604 / 1.1786 = 1.069404, giving B. A reverses the requested quotation; C multiplies the two quotes and does not yield the required currency units.

EUR/GBP = 1.2604 / 1.1786 = 1.069404

易错点：答案大小不如货币单位可靠：先确保结果是 EUR per GBP。

Common trap: Currency units are a better guide than the numerical size: the result must be EUR per GBP.

原资料核对 / **Source review**

原表“Beginning of period”位置不规则，本讲义保留原文；题目仅使用给定两项即期汇率，无须补写其他时点或数据。

The source places Beginning of period irregularly. It is preserved; the calculation uses only the two supplied spot quotes and requires no invented date or data.

## Q04 覆盖利率平价

Covered interest rate parity

题源 Q / PDF p.91（经济学 p.1）| 答源 A / PDF p.4

An analyst gathers the following information:

| | |
|---|---|
| USD/AUD spot rate | 0.8027 |
| AUD | 1-year interest rate 3.30% |
| USD | 1-year interest rate 2.42% |

USD/AUD is the amount of USD per 1 AUD. The USD/AUD 1-year forward rate is closest to:

分析师收集到以下信息：USD/AUD 即期汇率为 0.8027；AUD 的 1 年期利率为 3.30%；USD 的 1 年期利率为 2.42%。USD/AUD 表示每 1 澳元对应的美元金额。USD/AUD 的 1 年期远期汇率最接近：

| | | |
|---|---|---|
| A. | 0.7959. | 0.7959。 |
| B. | 0.8096. | 0.8096。 |
| C. | 0.8292. | 0.8292。 |

原答案 / Supplied answer: A

解析：每 1 AUD 报 USD，故 USD 利率在分子、AUD 利率在分母：0.8027 × 1.0242 / 1.033 = 0.7958619，选 A。AUD 利率高于 USD，所以 AUD 应呈远期贴水，远期低于 0.8027；B、C 都不符合这一方向。

Explanation: The quote is USD per AUD, so USD interest belongs in the numerator and AUD interest in the denominator: 0.8027 × 1.0242 / 1.033 = 0.7958619, giving A. AUD has the higher interest rate and trades at a forward discount; its forward quote is below 0.8027. B and C fail this directional check.

$$F = 0.8027 \times (1 + 2.42\%) / (1 + 3.30\%) = 0.7958619$$

易错点：先写“USD per AUD”，避免把两个利率倒放。

Common trap: Write USD per AUD first to avoid reversing the two interest rates.

## Q18 利率与远期定价

Interest rates and forward pricing

题源 Q / PDF p.93（经济学 p.3）| 答源 A / PDF p.18

With respect to the foreign exchange market, an arbitrage relationship involving countries' relative interest rates serves as the basis for:

在外汇市场中，涉及各国相对利率的套利关系，是以下哪项的定价基础？

| | | |
|---|---|---|
| A. | real exchange rates. | 实际汇率。 |
| B. | forward exchange rates. | 远期汇率。 |
| C. | nominal exchange rates. | 名义汇率。 |

### 原答案 / Supplied answer: B

解析：覆盖利率平价把即期汇率、两币种利率和远期汇率联系起来，否则可通过借入一种货币、换汇并投资另一种货币且锁定远期进行套利，故选 B。实际汇率主要是名义汇率经两国物价调整；即期名义汇率本身不是单凭这条利率套利关系决定。

Explanation: Covered interest parity connects spot, the two currencies' interest rates, and forward rates. Otherwise borrowing in one currency, converting and investing in the other, and locking in a forward could create arbitrage. Thus B is correct. Real rates adjust nominal rates for relative prices, while the spot nominal rate is not determined solely by this interest-arbitrage relationship.

易错点："arbitrage + relative interest rates"对应远期，不是购买力平价。

Common trap: Arbitrage plus relative interest rates points to forwards, not purchasing power parity.

## Q49 远期汇率对利率的敏感性

Forward-rate sensitivity to interest rates

题源 Q / PDF p.98（经济学 p.8）| 答源 A / PDF p.49

All else being equal, in an efficient market a forward exchange rate will decrease as a result of an increase in the:

其他条件不变，在有效市场中，以下哪项上升会导致远期汇率下降？

| | | |
|---|---|---|
| A. | spot exchange rate. | 即期汇率。 |
| B. | foreign risk-free interest rate. | 外国无风险利率。 |
| C. | domestic risk-free interest rate. | 本国无风险利率。 |

### 原答案 / Supplied answer: C

解析：原答案采用"外币/本币"报价：F(f/d)=S(f/d)×(1+r外国×T)/(1+r本国×T)。本国利率增加使分母增大，远期报价下降，因此原答案为C。A增加即期报价，B增加分子，都会令该方向的远期报价上升。若改报本币/外币，比较方向会反过来，故必须先明确口径。

Explanation: The supplied solution quotes foreign currency per domestic currency: F(f/d)=S(f/d)×(1+r_foreign×T)/(1+r_domestic×T). A higher domestic rate raises the denominator and lowers the forward quote, so the supplied answer is C. A raises spot and B raises the numerator, both increasing this quote. Inverting the quotation reverses the comparative direction, so the convention must be explicit.

$$F(f/d) = S(f/d) \times (1 + r_{foreign} \times T) / (1 + r_{domestic} \times T)$$

易错点：原题没有写报价方向；原解析以外币/本币为前提，不能机械把domestic永远放在分子。

Common trap: The stem omits the quotation direction; its solution assumes foreign per domestic. Do not mechanically put the domestic rate in the numerator.

**原资料核对 / Source review**

题干未明确报价方向。原答案C在"每1本币对应多少外币"的口径下自洽；若使用倒数报价，结果方向会改变。

The stem omits the quote direction. Original answer C is consistent with foreign-currency units per domestic unit; using the reciprocal quote changes the direction.

## Q54 由汇率计算远期点数

Calculating forward points

题源 Q / PDF p.99（经济学 p.9）| 答源 A / PDF p.54

If the spot USD/EUR exchange rate (the amount of USD per one EUR) is 1.1605 and the one-year forward rate is 1.17240, the forward points are:

若 USD/EUR 即期汇率（每 1 欧元对应的美元金额）为 1.1605，一年期远期汇率为 1.17240，远期点数为：

| | | |
|---|---|---|
| A. | +101.5. | +101.5。 |
| B. | +102.5. | +102.5。 |
| C. | +119.0. | +119.0。 |

原答案 / Supplied answer: C

解析：先求报价差额：1.17240 - 1.1605 = 0.01190。按本题四位小数的点数惯例乘以 10,000，得到 +119.0，选 C。A、B 接近相对变化的其他缩放结果，不是题目要求的报价差额点数。

Explanation: Subtract the quotes: 1.17240 - 1.1605 = 0.01190. Under this question's four-decimal convention, multiply by 10,000 to obtain +119.0, giving C. A and B resemble other scalings of relative changes, rather than the required quoted rate difference in points.

Points = (1.17240 - 1.1605) × 10,000 = +119.0

易错点：远期点数不是 (F/S - 1) 的百分比或基点。

Common trap: Forward points are not the percentage or basis-point change calculated from F/S - 1.

## Q63 由点数计算远期汇率

Converting forward points into a forward rate

题源 Q / PDF p.101（经济学 p.11）| 答源 A / PDF p.63

If the spot rate for AUD/USD (amount of AUD per 1 USD) is 1.4780 and the 1-month forward points are -16.0, the 1-month forward rate for AUD/USD is closest to:

若 AUD/USD 即期汇率（每 1 USD 对应的 AUD 金额）为 1.4780，1 个月远期点数为 -16.0，1 个月 AUD/USD 远期汇率最接近：

| | | |
|---|---|---|
| A. | 1.3180. | 1.3180。 |
| B. | 1.4764. | 1.4764。 |
| C. | 1.4796. | 1.4796。 |

原答案 / Supplied answer: B

解析：把点数还原成报价差额：-16 / 10,000 = -0.0016。远期 = 1.4780 - 0.0016 = 1.4764，选 B。A 的小数位错误；C 把负号反成正号。这里点数已经对应 1 个月期限，不需再除以 12。

Explanation: Convert points into a rate difference: -16 / 10,000 = -0.0016. The forward is 1.4780 - 0.0016 = 1.4764, giving B. A uses the wrong decimal scale; C reverses the sign. The points already refer to the one-month tenor and should not be divided by 12 again.

F = 1.4780 + (-16.0 / 10,000) = 1.4764

易错点：点数已给定期限；换点值，不做多余年化或月化。

Common trap: The points already have a tenor; convert their scale without extra annualization or monthly scaling.

## Q45 实际升值率

Real currency appreciation

题源 Q / PDF p.98（经济学 p.8）| 答源 A / PDF p.45

An analyst gathers the following information:

| | |
|---|---|
| Foreign inflation rate | 2% |
| Domestic inflation rate | 3% |
| Nominal appreciation of domestic currency against foreign currency | 6% |

The real appreciation of the domestic currency against the foreign currency is closest to:

分析师收集到以下资料：外国通胀率 2%；本国通胀率 3%；本币相对外币名义升值 6%。本币相对外币的实际升值率最接近：

| | | |
|---|---|---|
| A. | 4%. | 4%。 |
| B. | 5%. | 5%。 |
| C. | 7%. | 7%。 |

### 原答案 / Supplied answer: B | 原答案 B；报价方向存在疑点，待确认

Supplied answer B; quotation inconsistency requires clarification

解析：原答案文档选B，用1.06×1.02/1.03-1=4.9709%，约5%，并把名义变化记为S(d/f)增加6%。但题干说“本币相对外币升值6%”：按外币/本币报价和本币商品相对变贵的通常实际升值定义，应为1.06×1.03/1.02-1=7.0392%，对应C。两者无法在同一报价方向下同时成立；保留原答案B，并将本题标为待确认。A的4%则错误地直接乘除百分数。

Explanation: The supplied document selects B using 1.06×1.02/1.03-1=4.9709%, approximately 5%, and labels the nominal change as a 6% rise in S(d/f). However, the stem says the domestic currency appreciates by 6%. Under a foreign-per-domestic quote and the usual definition of domestic real appreciation as domestic goods becoming relatively dearer, 1.06×1.03/1.02-1=7.0392%, corresponding to C. Both cannot hold in the same quote direction. Preserve source answer B and flag the item for clarification. A incorrectly multiplies and divides percentage rates directly.

Supplied solution: 1.06 × 1.02 / 1.03 - 1 = 4.9709% ≈ 5% (B)

Literal domestic appreciation: 1.06 × 1.03 / 1.02 - 1 = 7.0392% ≈ 7% (C)

易错点：不要硬记“本币实际升值=名义升值+外国通胀-本国通胀”；先定义报价和实际升值方向。

Common trap: Do not memorize domestic real appreciation as nominal appreciation plus foreign minus domestic inflation without defining the quote and appreciation direction.

原资料核对 / **Source review**

资料疑点：原答案B已核对原图；不是识别错误。题干的本币升值方向与原解析S(d/f)增加的公式不一致。建议在复习记录中标“待确认”，不要把该题的答案字母当作通用公式。

Source issue: B is verified against the original answer image and is not an OCR error. Domestic appreciation in the stem conflicts with the solution's rise in S(d/f). Mark the item for clarification and do not treat its answer letter as a general formula.

定义复核 / Definition check: RBA [E1, E2]；详见本书“资料核对与来源” / see Source review and references.

## Q46 名义与实际变化的抵消

Offsetting nominal and relative-price changes

题源 Q / PDF p.98（经济学 p.8）| 答源 A / PDF p.46

Price levels increase by 2% in the US and by 6% in the Eurozone. If the nominal spot exchange rate of the USD/EUR (amount of US dollars per 1 euro) decreases by 4%, the absolute change in the real exchange rate is closest to:

美国物价上涨 2%，欧元区物价上涨 6%。若 USD/EUR 名义即期汇率（每 1 欧元对应的美元金额）下降 4%，实际汇率的绝对变化幅度最接近：

| | | |
|---|---|---|
| A. | 0%. | 0%。 |
| B. | 4%. | 4%。 |
| C. | 8%. | 8%。 |

原答案 / Supplied answer: A

解析：USD/EUR 的基础货币是 EUR，故实际汇率变化因子 = 0.96 × 1.06 / 1.02 = 0.997647。实际变化约 -0.2353%，绝对幅度约 0.2353%，在选项中最接近 0%，选 A。近似计算 -4% + 6% - 2% = 0%；并非精确地完全不变。

Explanation: EUR is the base currency in USD/EUR. The real-rate change factor is 0.96 × 1.06 / 1.02 = 0.997647. The real change is about -0.2353%, with magnitude about 0.2353%, closest to 0% among the choices, so A. The approximation is -4% + 6% - 2% = 0%; the exact change is not literally zero.

$q_1 / q_0 = 0.96 \times 1.06 / 1.02 = 0.997647$

Exact change = -0.2353%; absolute magnitude = 0.2353% ≈ 0%

易错点：closest to 允许近似；不要把答案 0% 讲成精确等于零。

Common trap: Closest to allows approximation; do not present the selected 0% as an exact zero.

# 全部答案与知识点索引

## Complete Answer Key and Topic Index

本表逐字母保留第二份文档的答案。星号表示需连同原资料核对说明阅读，尤其第45题不能把原答案当成无争议结论。

This table preserves every answer letter from the second document. An asterisk marks an item that should be read with its source-review note; especially for Q45, the original key is not an unqualified conclusion.

| 原题 Original | 原答案 Source answer | 单元与考点 Unit and topic | 题/答页 Q/A pages |
|---|---|---|---|
| Q01 | B | 03 财政与货币的界线 Fiscal versus monetary policy | 91 / 1 |

# 资料核对与来源

## Source Review and References

以下区分原文、原答案和本讲义的解释。题库的缺失、标签问题或简化结论保留可见，不通过改写原题消除。题源Q均指第一份文档；答源A均指第二份文档。

The review distinguishes original text, supplied answers, and this guide's explanations. Missing wording, label issues, and simplifications remain visible rather than being removed by rewriting the question. Q denotes the first document; A denotes the second.

### Q24 | 原答案 / Supplied answer B

勾结/非勾结的需求曲线分类是原答案采用的模型口径，不能无条件推广。

The collusive/non-collusive demand-curve distinction is the supplied model convention, not an unconditional general claim.

### Q40 | 原答案 / Supplied answer B

第二行缺少时点标签；原文印JPYIUSD。解析按答案文档将第二行解释为期末，不补写原题。

The second row lacks a time label, and the source prints JPYIUSD. The explanation follows the solution in treating the row as period-end without altering the original.

### Q41 | 原答案 / Supplied answer B

原表含位置不规则的Beginning of period；保留原文，仅使用给定两条即期汇率。

The table contains an irregular Beginning of period label; preserve it and use only the two supplied spot rates.

### Q43 | 原答案 / Supplied answer A

名义与实际汇率的比较较简化；实际汇率并不被保证符合PPP或恒定。

The nominal-versus-real contrast is simplified; real rates are not guaranteed to satisfy PPP or remain constant.

### Q45 | 原答案 / Supplied answer B*

原答案4.9709% ≈ 5%；按题干本币升值的通常定义复核为7.0392% ≈ 7%（C）。原题与原解析方向冲突，待确认；不是官方勘误。

The source gives 4.9709%≈5%. The usual literal domestic-appreciation interpretation gives 7.0392%≈7% (C). The stem and solution conflict in direction; clarification is needed. This is not an official erratum.

### Q49 | 原答案 / Supplied answer C*

题干没有报价方向；原答案采用外币/本币，本国利率在分母。

The stem omits quotation direction; the supplied answer uses foreign per domestic, with the domestic rate in the denominator.

### Q50 | 原答案 / Supplied answer A*

CR_N=100%不能在N未说明时证明单一垄断；CR_1=100%才足以直接支持。

CR_N=100% does not prove a single-firm monopoly without specifying N; CR_1=100% does.

### Q57 | 原答案 / Supplied answer A

答案页底部学习目标误写垄断竞争；题干和解释均为完全竞争，按题干归类。

The answer-page learning objective incorrectly names monopolistic competition; the stem and explanation concern perfect competition and determine the classification.

### Q62 | 原答案 / Supplied answer C*

选项C缺词，原文仅in public spending on infrastructure.；原答案解释新增支出，但不把推断填回题干。

Option C is incomplete: in public spending on infrastructure. The supplied explanation refers to new spending, but this inference is not inserted into the stem.

### Q74 | 原答案 / Supplied answer A

原资料采用快速、短期黑天鹅冲击对应战术调整的框架；并非所有黑天鹅只产生短期影响。

The source maps a fast, short-term black-swan shock to a tactical response; not every black swan has only short-term consequences.

## 来源与使用范围 / Sources and scope

[Q] 1000题(7).pdf：PDF第91-103页，经济学内部第1-13页，原题1-76。全部英文题干、选项与数据来自此文件。

[Q] 1000题(7).pdf: PDF pages 91-103, Economics internal pages 1-13, questions 1-76. All original English stems, choices, and numerical data come from this file.

[A] 经济学(2).pdf：PDF第1-76页，每页一题解析。全部原答案字母来自此文件；讲义对解析进行双语归纳，而非逐字复制所有原解析。

[A] 经济学(2).pdf: PDF pages 1-76, one solution per page. Every supplied answer letter comes from this file. Explanations are bilingual teaching summaries rather than a verbatim reproduction of every source explanation.

[E1/E2] 仅用于复核第45题的实际汇率定义：采用外币/本币报价时，实际汇率为名义汇率乘以本国/外国物价。本币升值使该名义报价上升。由此推出的7.0392%是本讲义的计算，不是央行对本题的答复。

[E1/E2] Used only to verify Q45's real-rate convention: under a foreign-per-domestic quote, multiply the nominal rate by domestic/foreign prices; domestic appreciation raises that nominal quote. The resulting 7.0392% is this guide's calculation, not a central-bank answer to this question.
