CFA一级财务报表速学与原题精讲

Bilingual concepts and all 130 supplied questions

先掌握规则，再用原题练习。同一知识点集中讲解，中英文逐段对照，保留原题号和答案页码。

Learn the rules first, then apply them to the original questions. Related concepts and exercises are grouped, with bilingual explanations and source page references.

范围 / Scope	第一份PDF第1至29页，共130题；第二份PDF第1至130页逐题对应。
学习结构 / Structure	10个教学单元；37道代表题；93道巩固题；全部题目均有双语解析。
题目来源 / Provenance	用户上传题库；原始官方或模拟题出处未注明。未编写新习题。

如何用较短时间完成第一轮

建议约120分钟。先读知识卡，再做每章最前面的代表题，暂时跳过巩固题。优先次序为现金流、财务比率、EPS、存货、长期资产和所得税，再完成其余单元。

Allow about 120 minutes for a first pass. Read the concept cards and attempt each chapter's core questions before its reinforcement questions. Prioritize cash flows, ratios, EPS, inventories, long-lived assets and taxes.

做完一题，用一句话说清“为什么用这个分子分母”或“为什么加减这个项目”。答对但说不出原因，也要记入待复习。第二轮仅针对规则、计算、准则、读题和时间五类错因补练。

After each attempt, explain why the formula uses its numerator and denominator or why an adjustment is added or subtracted. A correct guess still needs review. On the second pass, target rule, calculation, framework, reading or timing errors.

读题先圈四项

① IFRS还是US GAAP；② 单位是元、千还是百万；③ 问期末还是平均；④ 问利润、现金还是比率。

Mark four items: IFRS or US GAAP; currency units, thousands or millions; ending or average balances; and whether the question asks for profit, cash or a ratio.

此资料按上传题目归纳，不等同于某一年度官方Reading顺序或全部LOS覆盖。正文的原答案与核对结论分开保留。

130题章节与知识点地图

教学单元 / Unit	题数	全部原题号 / Original question numbers	第一轮代表题 / Core
01 财务报告框架 审计与报表质量 Reporting framework, audits and reporting quality	13	1, 2, 3, 6, 19, 25, 27, 30, 34, 41, 42, 69, 125	1, 19, 27, 69
02 收入确认与利润列报 Revenue recognition and income presentation	6	61, 80, 99, 103, 106, 111	99, 103
03 基本与稀释每股收益 Basic and diluted earnings per share	8	12, 26, 35, 39, 72, 73, 120, 121	26, 35, 39, 73
04 现金流量与自由现金流 Cash flows and free cash flow	24	4, 14, 17, 22, 23, 29, 32, 38, 40, 43, 44, 47, 57, 65, 83, 91, 93, 98, 101, 102, 105, 110, 117, 130	32, 38, 40, 44, 102, 130
05 存货计价 减记与比率影响 Inventory methods, write-downs and ratio effects	15	13, 33, 48, 50, 52, 53, 54, 56, 58, 59, 63, 66, 67, 94, 118	13, 58, 67, 94, 118
06 长期资产 无形资产与减值 Long-lived assets, intangibles and impairment	19	15, 24, 31, 49, 55, 62, 68, 70, 75, 78, 88, 89, 92, 104, 109, 112, 113, 115, 128	70, 75, 104, 109
07 租赁 养老金与金融资产 Leases, pensions and financial assets	7	46, 60, 77, 100, 116, 119, 129	46, 60, 119
08 所得税与递延所得税 Income taxes and deferred taxes	6	37, 45, 64, 81, 86, 127	81, 86
09 财务比率 共同比分析与杜邦分解 Ratios, common-size analysis and DuPont decomposition	25	16, 18, 20, 21, 28, 36, 51, 71, 74, 76, 79, 82, 85, 87, 90, 95, 96, 97, 107, 108, 114, 122, 123, 124, 126	28, 74, 96, 114, 124
10 财务预测与分析偏差 Forecasting and analytical biases	7	5, 7, 8, 9, 10, 11, 84	10, 84

每题只分配到一个主单元。跨知识点关联在知识卡的“对应原题”中列出。所有题号均为原题号，没有重编号。

原资料中需要先说明的问题

这些说明处理已经发现的原文数字或条件缺失。学习时以规则和明确前提为准，不机械记忆答案字母。

These notes address actual numerical conflicts or omitted assumptions in the supplied files. Learn the rule and stated assumptions rather than memorizing answer letters.

原题	原答案	核对说明
Q4	C	按传统IAS 7，支付利息和支付股利均可能从CFO移至CFF并提高CFO，题面不能唯一排除B。
Q49	B	原题两次重估值印成€27,50及€22,50；答案使用€27,500及€22,500。
Q53	B	题干原始成本为22,000；答案按2,000计算。按印刷题干及IFRS应为2,500，选C。
Q62	B	省略准则。IFRS账面值为17,400，选B；US GAAP持有使用资产不减值，选C。
Q64	A	省略准则。IFRS通常减少DTA，选A；US GAAP通常设估值备抵，选B。
Q112	B	省略准则。IFRS减值350，选B；US GAAP持有使用资产减值300，选A。

其他需补口径的题为Q15、Q41、Q50、Q55、Q57、Q59、Q75，具体见逐题说明。Q3、Q17、Q25、Q61等解析还做了措辞和适用范围修正，未改变其原答案。

Additional framework or wording qualifications apply to Q15, Q41, Q50, Q55, Q57, Q59 and Q75. Explanations for Q3, Q17, Q25, Q61 and others are refined without changing the supplied key.

关于现金流分类，本题库的答案使用传统IAS 7口径。IFRS 18已修改相关规则，因此这里的旧题分类选择不能当作不受时间及适用准则影响的永久规则。

Cash-flow classification answers follow the traditional IAS 7 convention used by the bank. IFRS 18 amended the relevant rules, so these old-question choices are not presented as timeless rules for every reporting framework.

01 财务报告框架 审计与报表质量

Reporting framework, audits and reporting quality

分清报告和分析，识别四种审计意见，并用经济实质判断报表质量。

Separate reporting from analysis, distinguish audit opinions, and assess the economic substance behind reported results.

本章 13 题；代表题 Q1、Q19、Q27、Q69

先学知识点 / Learn the rules first

1 报告提供信息 分析作出判断

Reporting supplies information; analysis draws conclusions

财务报告提供经营表现、财务状况及其变化的信息；财务分析用这些信息评估表现并作经济决策。把原始数据转换成比率或共同比报表，属于处理数据；解释比率的含义才属于分析。

Financial reporting supplies information about performance, financial position and changes in financial position. Analysis uses it to evaluate performance and support economic decisions. Calculating ratios or common-size statements is data processing; interpreting them is analysis.

对应原题 / Related questions: Q42, Q125

2 四种审计意见按问题严重程度区分

Distinguish the four audit opinions

无保留意见说明报表在重大方面公允列报。保留意见适用于已发现错报重大但不广泛，或无法取得证据且潜在影响重大但不广泛。不利意见针对重大且广泛的错报。无法表示意见通常表示证据不足，潜在影响重大且广泛，审计师无法形成意见。不能把无法表示意见理解为已证实造假，也不能把所有重大偏离都归入不利意见。

An unmodified opinion means fair presentation in all material respects. A qualified opinion concerns material but non-pervasive issues or scope limitations. An adverse opinion concerns material and pervasive misstatements. A disclaimer generally reflects insufficient evidence with potentially material and pervasive effects. A disclaimer is not proof of fraud.

对应原题 / Related questions: Q19, Q25, Q27, Q41

3 报表质量与盈利质量分开看

Reporting quality differs from earnings quality

报表质量关注信息是否忠实、透明、可用于决策；盈利质量关注利润能否持续及是否有现金支撑。汇率收益可能真实且列报合规，但持续性弱。把两个业务分部合并披露会掩盖各自盈利能力，属于信息偏差。遵循GAAP也不代表没有盈余管理。

Reporting quality concerns faithful, transparent, decision-useful information. Earnings quality concerns sustainability and cash support. A foreign-exchange gain can be accurately reported yet unsustainable. Combining unlike segments obscures their profitability. GAAP compliance does not eliminate earnings management.

对应原题 / Related questions: Q1, Q2

4 识别激进会计与低质量报告的条件

Identify aggressive choices and enabling conditions

提高设备残值会降低当期折旧，从而抬高利润和资产账面额。内部控制薄弱创造的是机会；业绩压力属于动机；为不当行为找理由属于合理化。Non-GAAP指标剔除正常且经常发生的经营费用，需要进一步调查，不能直接把调整后利润当作可持续利润。

A higher estimated residual value reduces current depreciation and raises reported profit and assets. Weak controls create opportunity; performance pressure creates motivation; justifying misconduct is rationalization. Excluding normal recurring operating expenses from non-GAAP profit calls for further analysis.

Straight-line depreciation = (Cost - Residual value) / Useful life

对应原题 / Related questions: Q3, Q6, Q69

5 政策 估计与错误分别处理

Policies, estimates and errors require different treatment

会计估计变更通常向未来适用，不重算历史折旧；前期重大错误通常追溯更正；会计政策变更通常追溯，但新准则可能规定完整追溯或修正追溯的过渡方法。横截面分析比较同一时点不同公司，趋势分析比较同一公司不同时期。两种方法都能支持与竞争对手的比较：既比较某一时点的水平，也比较各公司的变化轨迹。

Changes in estimates are generally prospective. Material prior-period errors are generally corrected retrospectively. Policy changes are generally retrospective, subject to specific transition provisions such as modified retrospective adoption. Cross-sectional analysis compares companies; trend analysis compares periods. Both methods can support peer comparison: compare levels at a point in time or compare companies' trends over time.

对应原题 / Related questions: Q30, Q34

做题前自检 / Before you answer

看到 audit opinion 先问是已发现错报，还是无法取得证据；看到 quality 先问是在评价信息，还是利润的可持续性。

For audit opinions, ask whether a misstatement is established or evidence is missing. For quality, ask whether the issue is information quality or earnings sustainability.

再用原题举例 / Core original examples

Q1 财务报告质量与盈利质量 | 代表题

Reporting quality versus earnings quality

原题第1页 / Question p. 1 答案第1页 / Solution p. 1 已核对 / Checked

在其他条件相同的情况下，下列哪家公司的财务报告质量最可能最低?

Which of the following companies would most likely be considered to have the lowest financial reporting quality, other things equal?

A 按 GAAP 提供高质量且有助决策的信息，但延迟发布报告的公司。
A company that provides high quality, decision-useful information under GAAP but delays its reports.

B 因有利汇率变动而报告较高利润的公司。
A company that reports significant profits due to a favorable exchange rate movement.

C 将两个不同业务分部的经营成果合并披露的公司。
A company that reports the results from two different segments as a combined entity.

答案 / Answer C | 核对 / Review C

报告质量问的是信息是否如实、有用且足够透明；盈利质量问的是利润是否可持续。将两个分部合并，会掩盖各自盈利表现，属于有偏的信息呈现，因此本题选 C。A 的及时性较差；B 的汇兑利润可能不可持续，但“利润不可持续”并不自动等于“报告失真”。

Reporting quality concerns faithful, useful and transparent information; earnings quality concerns sustainable performance. Combining two different segments can obscure their individual profitability, making C the lowest-quality presentation among these choices. A has a timeliness weakness. B may have unsustainable earnings, but faithfully reporting an unusual gain does not itself make the reporting biased.

易错点 / Trap 看到一次性或不可持续利润，先区分“盈利质量低”和“报告质量低”。

Do not confuse unsustainable earnings with misleading reporting.

Q19 无法表示审计意见 | 代表题

Disclaimer of opinion

原题第4页 / Question p. 4 答案第19页 / Solution p. 19 已核对 / Checked

审计师在以下哪种情况下会出具无法表示意见?

A disclaimer of opinion is issued when an auditor:

A 无法发表审计意见。
is unable to issue an opinion.

B 指出存在对会计准则的某项例外。
notes an exception to accounting standards.

C 发现严重偏离会计准则。
finds a material departure from accounting standards.

答案 / Answer A | 核对 / Review A

Disclaimer 表示审计师无法取得足够适当证据，从而不能形成意见，选 A。需区分“证据不足，无法判断”和“证据充分，确认报表有问题”。后者如错报重大且广泛，通常是 adverse opinion。范围受限并不一律导致无法表示意见，严重程度也影响结论。

A disclaimer means the auditor cannot form an opinion, typically because sufficient appropriate evidence is unavailable and the possible effects could be material and pervasive. Distinguish inability to assess the statements from a supported conclusion that the statements are misstated. Material and pervasive identified misstatements ordinarily lead to an adverse opinion.

易错点 / Trap 无法表示意见不等于审计师已证实公司造假。

A disclaimer is not itself a finding that fraud has been proven.

Q27 否定审计意见 | 代表题

Adverse audit opinion

原题第6页 / Question p. 6 答案第27页 / Solution p. 27 已核对 / Checked

下列哪种意见最能表明审计师认为财务报表严重偏离会计准则，且未公允列报?

Which of the following opinions is the best indication that the auditor believes that the financial statements depart materially from accounting standards and are not fairly presented?

A 否定意见。
Adverse opinion

B 保留意见。
Qualified opinion

C 无法表示意见。
Disclaimer of opinion

答案 / Answer A | 核对 / Review A

题干强调财务报表整体未公允列报，意图对应否定意见。严谨地说，审计师取得充分适当证据，确认错报重大且具有广泛性时，发表 adverse opinion。保留意见对应重大但不广泛的问题；无法表示意见侧重证据不足，不能形成意见。

The statement that the financial statements are not fairly presented points to an adverse opinion. More precisely, an adverse opinion follows sufficient evidence of misstatements that are both material and pervasive. A qualified opinion

addresses material but non-pervasive issues; a disclaimer concerns inability to obtain sufficient evidence and form an opinion.

易错点 / Trap 区分“确认报表整体有重大问题”和“证据不足无法下判断”。

Distinguish a supported conclusion of pervasive misstatement from inability to obtain enough evidence.

核对说明 / Review note
原答案 A 保留。审计意见的严谨区分还需要“广泛性 pervasive”，不能只凭 material 一词判断 adverse。
A is retained. A rigorous opinion decision also requires pervasiveness; materiality alone does not determine an adverse opinion.

Q69 激进会计与残值估计 | 代表题

Aggressive accounting and residual-value estimates

原题第15页 / Question p. 15 答案第69页 / Solution p. 69 已核对 / Checked

以下哪项可能表明公司利用激进会计选择提高本期报告的业绩和财务状况?

Which of the following might indicate that a company uses aggressive accounting choices to increase its reported performance and financial position in the current period?

A 提高物业、厂房及设备的预计残值。
Increasing the estimated salvage values of PP&E

B 把折旧法从直线法改为双倍余额递减法。
Changing the depreciation method from straight-line to double-declining balance

C 存货价格下降且数量不变时，把存货计价方法从加权平均法改为FIFO。
Changing from weighted average to FIFO inventory valuation method in a period of declining inventory prices and constant inventory quantities

答案 / Answer A | 核对 / Review A

提高残值减少可折旧金额，在其他条件相同时降低后续折旧、抬高利润和资产账面额，因此A最符合激进会计方向。B一般使资产早期折旧更高、利润更低；价格下降时FIFO将较贵旧成本转入COGS，C一般压低利润。估计提高也可能有合理依据，本题只识别需要关注的信号。

A higher residual value lowers the depreciable base, reducing depreciation and raising reported profit and asset carrying amount, other things equal. Thus A signals the aggressive direction. Accelerated depreciation generally lowers early-period income, and FIFO with declining costs generally raises COGS. A changed estimate can still be justified; this is a warning signal, not proof of misconduct.

易错点 / Trap 识别利润方向不等于直接认定舞弊，仍要检查估计依据。

An earnings-increasing estimate is a signal to investigate, not automatic proof of fraud.

同知识点巩固题 / Reinforcement

Q2 GAAP 合规报告的质量层级

Quality spectrum within GAAP-compliant reports

原题第1页 / Question p. 1 答案第2页 / Solution p. 2 已核对 / Checked

在符合 GAAP 的财务报告质量谱系中，下列哪项质量最低?

Which of the following is lowest in quality on the spectrum of GAAP conforming financial reports?

A 激进的会计选择。
Aggressive accounting choices

B 盈余管理。
Earnings management

C 保守的会计选择。
Conservative accounting choices

答案 / Answer B | 核对 / Review B

在本题限定的 GAAP 合规范围内，激进和保守会计都可能造成偏向，但盈余管理带有主动操纵报告利润及其解读的意图，质量更低。因此选 B。“符合准则”只能说明没有明显越过准则边界，并不保证信息中立或盈利可靠。

Within the GAAP-compliant portion of the quality spectrum, both aggressive and conservative choices can introduce bias. Earnings management goes further by deliberately influencing reported earnings and how users interpret them, so B ranks lowest here. Compliance with accounting standards does not by itself guarantee neutrality or sustainable earnings.

易错点 / Trap 保守会计也可能有偏；不要把“保守”一律等同于最高质量。

Conservative accounting can also be biased; conservative does not automatically mean highest quality.

Q3 非 GAAP 指标与反复剔除项目

Non-GAAP measures and recurring exclusions

原题第1页 / Question p. 1 答案第3页 / Solution p. 3 已核对 / Checked

面对以下哪种财务呈现，分析师最可能需要进一步分析？

An analyst would most likely conduct additional analysis when faced with which of the following financial presentations?

A 某项非 GAAP 财务指标剔除了一项很可能再次发生的费用。
A non-GAAP financial measure that excludes an expense that is likely to recur

B 在提交 SEC 的文件中披露非 GAAP 财务指标。
Reporting a non-GAAP financial measure in an SEC filing

C 将存货计价方法由 LIFO 改为 FIFO。
A change from LIFO inventory accounting to FIFO

答案 / Answer A | 核对 / Review A

若费用实际上会反复发生，却从调整后业绩中剔除，指标可能夸大持续盈利能力，因此应追查 A。仅仅披露非 GAAP 指标不必然有问题；需要检查可比 GAAP 指标、调节表及呈现方式。方法变更也需要理解，但本题最直接的警讯是反复剔除必要经营成本。

Excluding an expense that is likely to recur can overstate sustainable performance, so A is the clearest reason for further investigation. Using a non-GAAP measure is not automatically improper; the analyst should inspect the comparable GAAP measure, reconciliation and presentation. A change from LIFO to FIFO also merits understanding, but the recurring exclusion is the strongest warning in these choices.

易错点 / Trap “Adjusted”不表示更真实；先问被剔除的费用未来还会不会发生。

Adjusted does not automatically mean more informative; ask whether the excluded expense will recur.

核对说明 / Review note
答案 A 保留。原解析把剔除经常性项目笼统说成“严格禁止”，表述过强。SEC 指引具体指出：剔除业务所必需的正常、经常性经营现金费用，可能具有误导性。
The answer remains A. The source explanation overstates the rule as a blanket prohibition. SEC guidance identifies exclusion of normal, recurring cash operating expenses necessary to run the business as a potentially misleading presentation.

Q6 舞弊三角中的机会

Opportunity in the fraud triangle

原题第2页 / Question p. 2 答案第6页 / Solution p. 6 已核对 / Checked

下列哪些有利于低质量财务报告出现的条件，最可能由内部控制薄弱造成?

Which of the following conditions conducive to issuing low-quality financial reports is most likely a result of poor internal controls?

A 合理化。
Rationalization

B 机会。
Opportunity

C 动机。
Motivation

答案 / Answer B | 核对 / Review B

内部控制薄弱意味着错误或舞弊更容易实施且不被发现，因此属于“机会”。动机是业绩压力、奖金或融资需求等推动因素；合理化是当事人为自身行为找理由。做题时分别问：为什么想做、为什么做得到、如何自我辩解。

Weak controls make errors or manipulation easier to carry out and conceal, creating opportunity. Motivation comes from pressures such as performance targets, compensation or financing needs. Rationalization is the justification a person uses for the behavior. Separate the incentive to act, the ability to act undetected and the justification for acting.

易错点 / Trap 控制薄弱不直接解释“为什么想造假”，而是解释“为什么有机会造假”。

Weak controls explain the opportunity to manipulate, rather than the underlying incentive.

Q25 审计的固有限制与期望差距

Audit limitations and the expectations gap

原题第5页 / Question p. 5 答案第25页 / Solution p. 25 已核对 / Checked

关于审计固有限制，下列哪项最准确?

Which of the following is most accurate with respect to inherent limitations of audits?

A 审计意见只依据审计师自己编制的信息。
An audit opinion is based on a review of information only prepared by the auditor

B 审计会穷尽检查财年内所有交易。
An audit is based on an exhaustive review of all transactions during a financial year

C 审计师的职责与公众对审计师的期望之间，可能存在期望差距。
An expectations gap may exist between the auditor's role and the public's expectation of auditors

答案 / Answer C | 核对 / Review C

审计师对管理层编制的财务报表获取证据，通常结合抽样和其他程序，而不是逐笔穷尽审查。因此审计提供合理保证，不是绝对保证。公众可能期待审计发现所有错误与舞弊，而审计目标是合理保证财务报表整体不存在由舞弊或错误导致的重大错报，这会产生期望差距。

Auditors gather evidence about financial statements prepared by management, using sampling and other procedures rather than exhaustive checking of every transaction. An audit provides reasonable, not absolute, assurance. An expectations gap arises when the public expects every error or fraud to be detected, while the audit objective is reasonable assurance that the statements as a whole are free of material misstatement due to fraud or error.

易错点 / Trap 合理保证不等于保证“所有交易无误”或“绝对不存在舞弊”。

Reasonable assurance does not guarantee that every transaction is correct or every fraud is detected.

核对说明 / Review note
原答案 C 正确，但“审计一般不旨在发现舞弊”的原解析容易误导；审计仍须考虑舞弊导致的重大错报。

C remains correct, but the source wording about fraud is incomplete: an audit still addresses the risk of material misstatement due to fraud.

Q30 会计政策与估计变更

Accounting policy and estimate changes

原题第7页 / Question p. 7 答案第30页 / Solution p. 30 已核对 / Checked

下列哪项可以采用修正追溯法报告?

Which of the following may be reported using the modified retrospective method?

A 更正前期差错。
Corrections of prior period errors

B 变更物业、厂房及设备的预计使用年限。
Changes in estimated useful life of PP&E

C 因采用新的收入确认准则而变更会计政策。
Changes in accounting policies based on the new revenue recognition standard

答案 / Answer C | 核对 / Review C

新收入准则的过渡规定曾允许修正追溯法：不重列已列报比较期，而在首次应用时调整相关期初余额以反映累积影响。使用年限变化属于估计变更，采用未来适用法；重大前期差错通常需要追溯重述。因此选 C。

The transition provisions for the new revenue standard allowed modified retrospective adoption: comparative periods were not restated, while relevant opening balances were adjusted for the cumulative effect. A useful-life change is an estimate change applied prospectively. Material prior-period errors generally require retrospective restatement. Therefore C is correct.

易错点 / Trap 政策变更先看新准则过渡条文；估计变更通常向前看。

For a policy change, check the standard’s transition rules; estimate changes generally apply prospectively.

Q34 横截面与趋势分析

Cross-sectional and trend analysis

原题第7页 / Question p. 7 答案第34页 / Solution p. 34 已核对 / Checked

可以使用以下哪种分析，把一家公司的财务比率与其主要竞争对手作比较?

Which of the following analyses can be used to compare a company's financial ratios with those of its major competitors?

A 仅趋势分析。
Trend only

B 仅横截面分析。
Cross-sectional only

C 趋势分析与横截面分析都可以。
Both trend and cross-sectional

答案 / Answer C | 核对 / Review C

同一时期比较公司与同行，是横截面分析；比较公司与同行在多个时期中的比率变化，是趋势分析。题干并未限于某一时点，因此两种都可以。趋势分析并非只能比较公司自身，也可比较不同公司的趋势。

Comparing the company and peers at one point in time is cross-sectional analysis. Comparing their ratio paths across multiple periods is trend analysis. Because the question does not restrict the comparison to a single date, both can be used. Trend analysis can compare competitors’ trajectories as well as a company’s own history.

易错点 / Trap “与竞争对手比较”不必只选横截面；若比较趋势，两者也可结合。

A peer comparison need not be exclusively cross-sectional; competitors' trends can also be compared.

Q41 保留意见与重大但不广泛的问题

Qualified opinions and material non-pervasive matters

原题第9页 / Question p. 9 答案第41页 / Solution p. 41 需补条件 / Assumption required

财务报表在以下哪种情况下最可能获得保留审计意见?

A qualified audit opinion is most likely issued when financial statements are prepared:

A 按照会计准则编制。
in compliance with accounting standards.

B 存在重大偏离会计准则。
with material departures from accounting standards.

C 存在某些限制或会计准则例外。
with some limitation or exception to accounting standards.

答案 / Answer C | 核对 / Review C（按所述条件 / under stated assumption）

原题意图选 C，即总体上可依赖报表，但某项例外或范围限制需要保留。严谨规则是：已发现错报重大但不广泛，或无法取得证据且潜在影响重大但不广泛，可出具保留意见。重大且广泛的已知错报才通常对应否定意见。因此原解析直接把 B 的“重大偏离”一律归为否定意见，过度简化。

The source intends C: the statements are broadly usable, but an exception or scope limitation requires qualification. More precisely, a qualified opinion addresses identified misstatements that are material but not pervasive, or an evidence limitation whose possible effects could be material but not pervasive. Material and pervasive known misstatements lead to an adverse opinion. The source's blanket rejection of B is therefore oversimplified.

易错点 / Trap 重大 material 不等于广泛 pervasive；这两个维度要分开判断。

Material and pervasive are different dimensions; materiality alone does not determine the opinion.

核对说明 / Review note
原答案 C 保留为命题意图，但题干与选项缺少“广泛性”条件；B 在某些情况下也可对应保留意见。
C is retained as the intended answer, but the options omit pervasiveness. B can also result in a qualified opinion in some circumstances.

Q42 财务分析框架的数据处理阶段

Data processing in the analysis framework

原题第9页 / Question p. 9 答案第42页 / Solution p. 42 已核对 / Checked

共同比财务报表最可能是哪一个财务报表分析阶段的产出?

Common-size statements are most likely the output of which of the following phases of the financial statement analysis framework?

A 处理数据。
Process data

B 分析和解读已处理数据。
Analyze/interpret the processed data

C 形成并传达结论与建议。
Develop and communicate conclusions and recommendations

答案 / Answer A | 核对 / Review A

把原始报表数字转换成百分比、比率或图表，是数据处理，因此生成共同比报表属于 A。解释毛利率为何下降、判断现金流质量属于分析和解读。最后才把这些判断整理为投资结论和建议。

Converting raw statement figures into percentages, ratios or charts is data processing. Producing a common-size statement therefore belongs in A. Explaining a margin decline or judging cash-flow quality is analysis and interpretation. Communicating the resulting conclusions and recommendations comes afterward.

易错点 / Trap “算出比率”是处理；“解释比率含义”才是分析。

Calculating a ratio is processing; explaining what it means is analysis.

Q125 财务报告与财务分析的角色

Financial reporting versus financial analysis

原题第28页 / Question p. 28 答案第125页 / Solution p. 125 已核对 / Checked

财务报告的作用最恰当的描述是什么?

The role of financial reporting is best described as:

A	作出经营、投资和融资决策。 making operating, investing, and financial decisions.
B	提供有关公司经营业绩、财务状况及财务状况变动的信息。 providing information about a company's performance, financial position, and change in financial position.
C	为作出经济决策而评价公司的过去、当前及潜在业绩。 evaluating a company's past, current, and potential performance for the purpose of making economic decisions.

答案 / Answer B | 核对 / Review B

财务报告负责提供信息；财务分析利用这些报告和其他资料作出评价，辅助投资及信贷等决策。因此 B 描述 reporting，C 描述 analysis，A 更接近管理层利用分析结果作出经营管理决策。

Financial reporting provides information about performance, financial position and changes in financial position. Financial analysis uses that information and other evidence to evaluate the company and support economic decisions. B describes reporting; C describes analysis; A describes management decision-making.

易错点 / Trap Reporting 提供信息；analysis 解释信息并服务决策。

Reporting supplies information; analysis interprets it to support decisions.

02 收入确认与利润列报

Revenue recognition and income presentation

沿着履约和控制权判断收入，不被收款时间误导。

Recognize revenue from performance and control, rather than from cash timing alone.

本章 6 题；代表题 Q99、Q103

先学知识点 / Learn the rules first

1 五步收入确认

The five-step revenue model

先识别客户合同，再识别单独的履约义务，确定交易价格，按相对单独售价分配价格，最后在履约义务满足时确认收入。题目问第一步，答案是识别合同，而不是先计算价格。

Identify the customer contract; identify distinct performance obligations; determine the transaction price; allocate that price using relative stand-alone selling prices; recognize revenue when or as obligations are satisfied. Identifying the contract comes first.

对应原题 / Related questions: Q106

2 预收款与应收款的方向相反

Advance payments and receivables are different

先收钱、后提供服务：现金增加，同时确认合同负债，当期不因收款本身确认收入。应收款的核心条件是收款权已无条件，收款前只需时间流逝。若收款权仍取决于其他履约条件，可能是合同资产；若履约前款项已经无条件到期，也可能同时确认应收款与合同负债。第61题按其简化情境选B，不应推广成所有合同必须全部履约后才能有应收款。

Cash received before providing services creates cash and a contract liability, not revenue merely because cash arrived. A receivable arises when the right to consideration is unconditional except for the passage of time. A conditional right may be a contract asset; an unconditional amount due before performance may create both a receivable and a contract liability. Q61 uses a simplified scenario; completing all contract obligations is not a universal prerequisite.

对应原题 / Related questions: Q61, Q103

3 控制权转移看买方取得了什么

Assess whether control has transferred

判断某一时点确认收入时，可看卖方是否已有现时收款权、买方是否取得法定所有权、实物占有或主要风险报酬，以及是否验收。原题若写的是卖方仍保留法定所有权或主要风险报酬，通常不能把它当作控制权已转移的支持证据。

Indicators of point-in-time transfer include a present right to payment, buyer legal title, physical possession, significant risks and rewards, and customer acceptance. An option stating that the seller still holds title or significant risks and rewards generally does not support transfer.

对应原题 / Related questions: Q80

4 满足期间确认条件时用进度计算累计收入

Use progress to measure revenue recognized over time

只有先满足期间确认收入的条件，才用适当的投入法或产出法衡量履约进度。成本投入法下，完成比例等于累计已发生成本除以预计总成本；累计收入等于合同总价乘完成比例；本期收入还需减去以前期间已确认的收入。第99题已给出成本能适当反映进度等条件。

First establish that revenue qualifies for recognition over time. Under an appropriate cost-to-cost method, progress equals cumulative costs incurred divided by total estimated costs. Cumulative revenue equals contract price times progress; current-period revenue deducts revenue recognized previously.

Progress = Costs to date / Total estimated costs
Current-period revenue = Contract price x Progress - Previously recognized revenue

对应原题 / Related questions: Q99

5 终止经营需单独识别

Identify discontinued operations

符合终止经营条件的重大业务组成部分，经营成果应与持续经营分开列报；并不一定要等实际出售完成。题库第111题将拟处置的重要业务线且不再参与经营作为判断背景。不要把所有小规模资产出售都归为终止经营。

A qualifying major component classified as discontinued operations is presented separately from continuing operations; an actual completed sale is not always required. A small asset disposal is not automatically a discontinued operation.

对应原题 / Related questions: Q111

做题前自检 / Before you answer

先问是否履约，再问是否转移控制权，最后才看收款或付款发生在何时。

Ask whether performance occurred and control transferred before considering the timing of cash.

再用原题举例 / Core original examples

Q99 按履约进度确认收入 | 代表题

Revenue recognized over time

原题第22页 / Question p. 22 答案第99页 / Solution p. 99 已核对 / Checked

一家公司签订一项为期 5 年的建筑合同，总售价 £3,000,000，预计总成本 £2,000,000，第一年实际发生成本 £500,000。公司对同类合同有丰富经验，已发生成本能够恰当衡量合同完成进度。假设收入日后极有可能不会发生重大转回，第一年最可能确认多少合同收入？

A company entered into a 5-year construction contract with a total sales price of £3,000,000.The estimated total costs are £2,000,000 and the company incurred £500,000 actual costs in the first year. The company has extensive experience with similar types of contracts. Costs incurred provide an appropriate measure of progress toward completing the contract. Assuming it is highly probable that revenue will not be subsequently reversed, revenue recognized under the contract in Year 1 is most likely:

A £500,000。
£500,000.

B £600,000。
£600,000.

C £750,000。
£750,000.

答案 / Answer C | 核对 / Review C

在题目采用的按进度确认口径下，成本投入法的履约进度 = 已发生成本/预计总成本 = 500,000/2,000,000 = 25%。第一年收入 = 合同总价 × 25% = £750,000。5 年只是合同期限，不能据此平均分摊收入；第一年确认的收入也不只等于已发生成本。

Using the cost-to-cost input measure assumed in the question, progress is costs incurred/total estimated costs = 500,000/2,000,000 = 25%. Year 1 revenue is 25% × £3,000,000 = £750,000. Do not divide revenue equally over the five-year term or simply equate revenue with incurred costs.

易错点 / Trap 按进度确认看完成比例，不是机械地按年份平均分摊。

Recognition follows measured progress, not an automatic straight-line allocation over years.

核对说明 / Review note
解题沿用答案页关于履约义务随时间满足的前提；实际应用中仍须先满足随时间确认收入的条件。
The solution assumes an over-time performance obligation; actual application first requires the over-time recognition criteria to be met.

Q103 预收款与合同负债 | 代表题

Advance receipts and contract liabilities

原题第23页 / Question p. 23 答案第103页 / Solution p. 103 已核对 / Checked

一家以日历年度为报告期间的公司在第 1 年收到客户付款，但将在第 2 年提供服务。该收款最可能使哪一项增加？

For a company reporting on a calendar year basis, the receipt of a payment from a client in Year 1 for the delivery of services in Year 2 most likely increases:

A 第 1 年净利润。
net income for Year 1.

B 第 1 年 12 月 31 日的负债。
liabilities as of 31 December of Year 1.

C 第 2 年经营活动现金流。
cash flow from operating activities for Year 2.

答案 / Answer B | 核对 / Review B

第 1 年收钱时尚未提供服务，应确认现金增加和合同负债（预收收入）增加，不能直接确认收入和利润。第 2 年履约时才将相关负债转为收入。现金已经在第 1 年收到，因此并非第 2 年新增的经营现金流。

Receiving cash before providing the service creates cash and a contract liability in Year 1. Revenue is recognized when the service is delivered in Year 2. The cash receipt belongs to Year 1 operating cash flow, not Year 2; receipt alone does not increase Year 1 profit.

易错点 / Trap 收入看履约；现金流看实际收付款；两者可能不在同一年。

Revenue follows performance; cash flow follows receipt or payment, possibly in a different year.

同知识点巩固题 / Reinforcement

Q61 应收账款与合同负债

Receivables and contract liabilities

原题第13页 / Question p. 13 答案第61页 / Solution p. 61 已核对 / Checked

根据趋同的收入确认准则，卖方在什么情况下于资产负债表确认应收账款?

According to the converged standards for revenue recognition, a receivable is recognized on the seller's balance sheet when:

A 合同签订时。
a contract is signed.

B 除收款外，所有履约义务都已完成时。
all performance obligations have been met except for payment.

C 在转让商品或服务之前已经收到对价时。
consideration is received in advance of transferring goods or services.

答案 / Answer B | 核对 / Review B

这组三个选项中B最符合题库意图：已经履约、只剩收款。更准确的判断标准是收款权已经无条件，付款到期只需时间流逝。单纯签约不自动产生应收款；先收款后履约通常形成合同负债。若收款仍取决于未来继续履约，通常是合同资产，不是应收账款。

B best matches the intended fact pattern: performance is complete and payment remains. The precise criterion is an unconditional right to consideration, with only the passage of time required before payment is due. Signing alone does not automatically create a receivable, and advance cash generally creates a contract liability. A right still conditional on further performance is normally a contract asset.

易错点 / Trap 应收款看收款权是否无条件；合同资产看是否仍有履约条件。

A receivable is unconditional; a contract asset still depends on something beyond the passage of time.

核对说明 / Review note
源答案把“所有履约义务完成”说得过于绝对。应收账款的正式定义是无条件收款权；某些合同可在全部履约完成前产生应收款。
The source overstates the need for all performance obligations to be completed. An unconditional right can arise before every obligation in a contract is satisfied.

Q80 控制权转移的指标

Indicators of transfer of control

原题第18页 / Question p. 18 答案第80页 / Solution p. 80 已核对 / Checked

根据趋同收入确认准则，下列哪项可能表明卖方已在某一时点向买方转移资产控制权？卖方拥有：

According to the converged standards for revenue recognition, which of the following might indicate that a seller has transferred control of an asset to a buyer at a point in time? The seller has:

A	资产的法定所有权。 legal title of the asset.
B	就该资产取得付款的现时权利。 a present right to payment for the asset.
C	资产所有权相关的重大风险和报酬。 significant risks and rewards of ownership related to the asset.

答案 / Answer B | 核对 / Review B

卖方已具有现时收款权，是控制权可能转移给客户的一个指标，故选B。法定所有权以及重大风险和报酬通常应转给客户，A、C却说仍由卖方持有，方向相反。控制权判断应综合合同事实，一个指标并不在所有情形下单独决定结论。

The seller’s present right to payment is an indicator that control may have transferred to the customer, so B is correct. Legal title and significant ownership risks and rewards are normally indicators when held by the customer; A and C incorrectly leave them with the seller. Assess the overall facts rather than treating any single indicator as universally decisive.

易错点 / Trap 读清谁拥有：seller有收款权，customer有资产控制权相关指标。

Track the party: the seller has a right to payment; the customer obtains the asset-related control indicators.

Q106 收入确认五步法

The five-step revenue model

原题第23页 / Question p. 23 答案第106页 / Solution p. 106 已核对 / Checked

根据趋同的收入确认准则，确认收入的五个步骤中，第一步是什么？

According to the converged accounting standards for revenue recognition, which of the following is the first of five steps in recognizing revenue?

A 确定交易价格。
Determine the transaction price

B 识别与客户订立的合同。
Identify the contract with the customer

C 识别合同中的单独履约义务。
Identify the distinct performance obligations in the contract

答案 / Answer B | 核对 / Review B

五步顺序为：识别客户合同；识别履约义务；确定交易价格；把交易价格分摊至履约义务；在履约义务满足时或随满足过程确认收入。因此 B 是第一步，C 是第二步，A 是第三步。

The sequence is: identify the customer contract; identify performance obligations; determine the transaction price; allocate that price to the obligations; recognize revenue when or as each obligation is satisfied. B is step 1, C is step 2 and A is step 3.

易错点 / Trap 记忆顺序：合同 → 义务 → 价格 → 分摊 → 履约确认。

Remember: contract → obligations → price → allocation → satisfaction.

Q111 终止经营的列报

Presentation of discontinued operations

原题第24页 / Question p. 24 答案第111页 / Solution p. 111 已核对 / Checked

一家公司制订计划，拟处置一项重要业务线，且以后不再参与该业务的运营。利润表最可能把该业务的经营结果列报为什么？

A company establishes a plan to dispose of one of its material lines of business and will have no further involvement in its operation. The income statement most likely reports the results of this line of business as:

A 终止经营。
discontinued operations.

B 异常或不经常发生项目。
unusual or infrequent items.

C 在实际出售前始终列为持续经营。
continuing operations until the actual sale is performed.

答案 / Answer A | 核对 / Review A

按题目给定的重大业务处置情形，最可能属于终止经营，应与持续经营结果分开列报。符合终止经营及待售等相关分类条件时，无须等到实际出售才分开列示。仅仅一次性或异常的费用，不自动构成终止经营。

The planned disposal of a material business line in this fact pattern most likely qualifies as a discontinued operation, reported separately from continuing operations. Once the relevant classification criteria are met, presentation need not wait until the actual sale. An unusual expense by itself does not constitute a discontinued operation.

易错点 / Trap “异常项目”与“整项重大业务终止经营”是不同概念。

An unusual item is different from discontinuing a material business component.

核对说明 / Review note
实际应用仍须满足终止经营和相关待售分类条件，并非任何处置意向都足够。
Actual application requires the discontinued-operation and relevant held-for-sale criteria; a bare intention to sell is not always sufficient.

03 基本与稀释每股收益

Basic and diluted earnings per share

每题先拆分分子和分母，再处理时间权重与稀释性。

Separate numerator and denominator, then handle time weighting and dilution.

本章 8 题；代表题 Q26、Q35、Q39、Q73

先学知识点 / Learn the rules first

1 基本EPS只分配给普通股股东

Basic EPS measures earnings available to common shareholders

净利润先减优先股股利，再除以加权平均普通股股数。普通股股利是利润分配，不从分子扣除。分母不能直接使用年末股数。题目若涉及累积优先股，还需考虑当期应计优先股股利，而不是只看是否宣布派付。

Subtract preferred dividends from net income and divide by weighted-average common shares. Common dividends distribute profit and are not deducted from the numerator. Do not substitute year-end shares for weighted-average shares. Cumulative preferred dividends may need deduction even if not declared.

Basic EPS = (Net income - Preferred dividends) / Weighted-average common shares

对应原题 / Related questions: Q26

2 现金增发和回购按时间加权 拆股追溯调整

Time-weight issues and repurchases; restate for splits

增发和回购会改变投入企业的资源，所以按实际在外时间加权。拆股和股票股利只是把原来的权益切成更多份，没有新增资源，因此对发生前的股数追溯调整。第35题先按回购日期求加权股数，再把所有适用期间股数乘以拆股倍数。

Issues and repurchases change resources available to the business and are time-weighted. Splits and stock dividends change the number of units without adding resources, so earlier share counts are restated. For Q35, weight the repurchase first and apply the split factor to the relevant earlier shares.

Weighted shares = Sum of (Shares outstanding x Fraction of year)
For a 2-for-1 split, restate earlier shares x 2

对应原题 / Related questions: Q12, Q35

3 可转换优先股假设已转换

Use the if-converted method for convertible preferred shares

假设优先股已转换，则不必再付优先股股利，因此将基本EPS分子中扣掉的股利加回，通常回到净利润；分母增加转换所得普通股。优先股股利不是可税前扣除的利息，不能乘以1减税率。新增股数应按可转换工具实际在外期间加权。

If preferred shares are assumed converted, preferred dividends are no longer paid. Add back dividends deducted in basic EPS, usually restoring net income, and add the common shares on conversion. Preferred dividends are not tax-deductible interest, so do not tax-adjust the add-back. Time-weight instruments issued during the year.

If-converted EPS = (NI - Total preferred dividends + Dividends on assumed-converted preferred shares) / (Weighted common shares + Weighted conversion shares)

对应原题 / Related questions: Q39, Q120, Q121

4 可转换债券加回税后利息

Add back after-tax interest for convertible debt

假设债券已转股，公司不再支付利息，但同时失去利息抵税，因此净利润只增加利息乘以1减税率。分母增加转换普通股。先算假设转换后的EPS，再与基本EPS比较，只纳入真正降低EPS的工具。

Conversion removes interest expense but also removes the related tax deduction. Net income therefore increases by interest times one minus the tax rate. Add the conversion shares to the denominator, calculate if-converted EPS and include the instrument only if it is dilutive.

If-converted EPS = [NI - Preferred dividends + Interest x (1 - Tax rate)] / (Weighted common shares + Conversion shares)

对应原题 / Related questions: Q73

5 期权用库存股法 分子通常不变

Options generally change the denominator only

库存股法假设期权行权所得现金用于按当期平均市价回购股票，新增股数只取净增部分。行权收到的钱是权益交易，不是营业收入或净利润，所以不加进EPS分子。行权价不低于平均市价时，通常不计入稀释股数。

The treasury stock method assumes exercise proceeds repurchase shares at the average market price. Only the net increase enters diluted shares. Exercise cash is an equity transaction, not income, so it is not added to the EPS numerator. Options are generally excluded when exercise price is at least average market price.

Incremental shares = Options x (1 - Exercise price / Average market price)

对应原题 / Related questions: Q72

做题前自检 / Before you answer

计算顺序固定为基本EPS → 加权股数 → 假设转换或行权 → 比较是否稀释。出现税率先判断工具是债券还是优先股。

Calculate basic EPS, weighted shares and assumed conversion or exercise, then test dilution. When a tax rate is given, identify whether the instrument is debt or preferred equity.

再用原题举例 / Core original examples

Q26 基本 EPS 的分子与分母 | 代表题

Basic EPS numerator and denominator

原题第6页 / Question p. 6 答案第26页 / Solution p. 26 已核对 / Checked

某公司截至 12 月 31 日财年资料如下：净利润 €80,000；已宣告并支付的普通股股利 €16,000；已宣告并支付的优先股股利 €10,000；加权平均流通普通股 150,000 股；年末流通普通股 130,000 股。基本 EPS 最接近多少？

An analyst gathers the following information about a company for its fiscal year ended 31 December.

Net income	€80,000
Common dividends declared and paid	€16,000
Preferred dividends declared and paid	€10,000
Weighted average common shares outstanding	150,000
Common shares outstanding at year end	130,000

Basic EPS is closest to

A €0.36。

B €0.47。

C €0.54。

答案 / Answer B | 核对 / Review B

基本 EPS=(净利润−优先股股利)/加权平均普通股股数=(80,000−10,000)/150,000=€0.4667，约 €0.47。普通股股利是普通股股东利润的分配，不再从 EPS 分子扣除。分母使用全年加权平均股数，而不是年末股数。

Basic EPS=(net income−preferred dividends)/weighted-average common shares=(80,000−10,000)/150,000=€0.4667, approximately €0.47. Common dividends distribute the earnings already attributable to common shareholders and are not deducted again. Use weighted-average shares rather than the year-end balance.

易错点 / Trap 只扣优先股股利，不扣普通股股利；分母用加权平均。

Deduct preferred dividends, not common dividends; use weighted-average shares.

Q35 回购时间加权与拆股追溯调整 | 代表题

Time-weighted repurchases and retrospective stock-split adjustment

原题第8页 / Question p. 8 答案第35页 / Solution p. 35 已核对 / Checked

某公司截至 12 月 31 日财年资料如下：净利润 $210,000；1 月 1 日流通普通股 50,000 股；4 月 1 日回购普通股 20,000 股。若 7 月 1 日实施 1 股拆为 2 股，全年基本 EPS 是多少?

An analyst gathers the following information about a company's fiscal year ended 31 December.

Net income	$210.000
Common shares outstanding on 1 January	50,000
Common shares repurchased on 1 April	20,000

If a 2-for-1 stock split took effect on 1 July, basic EPS for the year is:

A $3.00。

B $3.50。

C $4.20。

答案 / Answer A | 核对 / Review A

先处理实际股本变化：拆股前口径的加权股数=50,000×3/12+(50,000−20,000)×9/12=35,000。再把全部期间股数按 1 拆 2 追溯调整：35,000×2=70,000。EPS=210,000/70,000=$3.00。回购改变投入资本，须按发生时间加权；拆股只改变每股计量单位，须统一追溯口径。

First time-weight the repurchase: 50,000×3/12+(50,000−20,000)×9/12=35,000 shares on the pre-split basis. Then restate every period for the 2-for-1 split: 35,000×2=70,000. EPS=210,000/70,000=$3.00. Repurchases change actual shares and are time-weighted; a split changes the unit of ownership and requires retrospective comparability.

易错点 / Trap 拆股不要只从 7 月起加倍；整年的股份单位都要统一。

Do not apply the split only from July; restate the share unit for the entire period.

核对说明 / Review note
原题净利润写为“$210.000”，按原答案计算确认其含义为 $210,000。
The source prints net income as “$210.000”; its answer calculation confirms that $210,000 is intended.

Q39 可转换优先股的稀释 EPS | 代表题

Diluted EPS with convertible preferred shares

原题第9页 / Question p. 9 答案第39页 / Solution p. 39 已核对 / Checked

某公司截至 12 月 31 日财年资料如下：净利润 €3,000,000；1 月 1 日流通普通股 3,500,000 股；4 月 1 日发行普通股 1,000,000 股；年末流通普通股 4,500,000 股；流通可转换优先股 400,000 股；每股优先股股利 €1.00。每股优先股可转换为 2 股普通股。假设没有其他潜在稀释证券，报告的稀释 EPS 最接近多少？

An analyst gathers the following information about a company for its fiscal year ended 31 December.

Net income	€3,000,000
Common shares outstanding,1 January	3,500,000
Common shares issued,1 April	1,000,000
Common shares outstanding,31 December	4,500,000
Convertible preferred shares outstanding	400,000
Convertible preferred dividend per share	€1.00

Each convertible preferred share is convertible into two common shares. If there are no other potentially dilutive securities outstanding, reported diluted EPS is closest to:

A €0.51。

B €0.57。

C €0.59。

答案 / Answer C | 核对 / Review C

普通股加权股数=3,500,000+1,000,000×9/12=4,250,000。基本 EPS=(3,000,000−400,000)/4,250,000=€0.6118。假设年初转换优先股，分母增加 400,000×2=800,000，分子不再扣其股利，所以转换后 EPS=3,000,000/(4,250,000+800,000)=€0.5941。低于基本 EPS，确属稀释，报告约 €0.59。

Weighted-average common shares are 3,500,000+1,000,000×9/12=4,250,000. Basic EPS=(3,000,000−400,000)/4,250,000=€0.6118. Assuming conversion, add 400,000×2=800,000 common shares and remove the preferred-dividend deduction from the numerator. Diluted EPS=3,000,000/5,050,000=€0.5941, below basic EPS, so the conversion is dilutive and C is reported.

易错点 / Trap 假设优先股已转换，就不能继续扣优先股股利；股利加回无需乘税后系数。

Once preferred shares are assumed converted, stop deducting their dividends; the dividend add-back is not tax-adjusted.

Q73 可转债与时间加权稀释EPS | 代表题

Convertible bonds and weighted diluted EPS

原题第16页 / Question p. 16 答案第73页 / Solution p. 73 已核对 / Checked

公司12月31日年结：净利润$1,200,000；1月1日普通股1,000,000股；4月1日新发100,000股；12月31日普通股1,100,000股。全年可转债面值$2,000,000、票息8%、税率30%，可转换为200,000股普通股，无其他潜在稀释证券。报告的稀释EPS最接近多少？

An analyst gathers the following information about a company's given fiscal year ended 31 December.

Net income	$1,200,000
Number of common shares outstanding on 1 January	1,000,000
Number of common shares issued on 1 April	100,000
Number of common shares outstanding on 31 December	1,100,000
Face value of convertible bonds outstanding for the year	$2,000,000
Coupon rate on convertible bonds	8%
Tax rate	30%

If the bonds are convertible into 200,000 common shares and there are no other potentially dilutive securities outstanding, the company's reported diluted EPS is closest to:

A $1.01。

B $1.03。

C $1.07。

答案 / Answer B | 核对 / Review B

加权股数=1,000,000+100,000×9/12=1,075,000。基本EPS=1,200,000÷1,075,000≈1.1163。可转债税后利息=2,000,000×8%×(1-30%)=112,000；假设转换EPS=(1,200,000+112,000)÷(1,075,000+200,000)=1.0290，低于基本EPS，有稀释作用，所以报告$1.03，选B。

Weighted shares = 1,000,000 + 100,000 × 9/12 = 1,075,000. Basic EPS is about 1.1163. Add back after-tax interest of 2,000,000 × 8% × (1 − 30%) = 112,000 and add 200,000 conversion shares. Diluted EPS = 1,312,000/1,275,000 = 1.0290, below basic EPS, so include the bonds and choose B, $1.03.

易错点 / Trap 现金新发股需要时间加权；可转债加回的是税后利息。

Time-weight newly issued common shares and add back after-tax, not pre-tax, bond interest.

同知识点巩固题 / Reinforcement

Q12 股份回购对 EPS 的影响

Share repurchases and EPS

原题第3页 / Question p. 3 答案第12页 / Solution p. 12 已核对 / Checked

其他条件不变，预测以下哪一项增加，最可能提高公司的预测每股收益?

All else being equal, forecasting an increase in which of the following will most likely increase forecasted EPS for a company?

A 股份回购。
Share repurchases

B 增发股票。
Secondary stock issuances

C 以股份支付员工薪酬。
Equity-based compensation of employees

答案 / Answer A | 核对 / Review A

EPS 的基本结构是归属于普通股的利润除以加权平均普通股股数。其他条件不变时，回购减少分母，因此 EPS 上升。增发和以股份支付薪酬通常增加股份数，从而摊薄 EPS。这里不额外加入回购融资利息、机会成本或经营变化，因为题目明确其他条件不变。

EPS divides earnings attributable to common shareholders by weighted-average common shares. Holding earnings constant, repurchases reduce the denominator and increase EPS. Secondary issuance and equity compensation

generally increase shares and dilute EPS. Financing costs and changes in operating performance are outside the question’s all-else-equal assumption.

易错点 / Trap EPS 因回购上升，并不自动代表公司经营利润增加。

Higher EPS after a repurchase does not necessarily mean higher operating earnings.

Q72 期权对稀释EPS的影响

Stock options and diluted EPS

原题第16页 / Question p. 16 答案第72页 / Solution p. 72 已核对 / Checked

计算基本EPS和稀释EPS时，若分子相同而分母不同，公司最可能存在什么情况?

In calculating basic and diluted EPS, if the numerators are the same but the denominators are different, the company.

A	本年进行了拆股。 split its stock during the year.
B	年末存在发行在外的股票期权。 had stock options outstanding at year end.
C	年末存在发行在外的可转换债券。 had convertible debt outstanding at year end.

答案 / Answer B | 核对 / Review B

具有稀释作用的股票期权按库存股法计算新增股数，使分母增加，但不把行权收入计入净利润，分子不变，故B正确。拆股需对基本和稀释EPS共同追溯调整，不造成两者之间这种差异；可转债假设转换通常同时增加分母及税后利息加回的分子。

Dilutive stock options add incremental shares under the treasury-stock method but do not add exercise proceeds to net income, so only the denominator changes, answer B. A stock split adjusts both basic and diluted share counts retrospectively. Assumed conversion of debt generally changes both the denominator and the numerator through after-tax interest add-back.

易错点 / Trap 期权收来的钱用于假设回购计算，不是公司赚到的利润。

Option exercise proceeds enter the assumed repurchase calculation, not net income.

Q120 可转换优先股稀释 EPS

Diluted EPS with convertible preferred stock

原题第26页 / Question p. 26 答案第120页 / Solution p. 120 已核对 / Checked

一家公司截至 12 月 31 日的财政年度资料如下：
净利润：€2,500,000
年度加权平均流通普通股：2,000,000 股
流通可转换优先股：1,000,000 股
每股可转换优先股股利：€1
每股优先股可转为 2 股普通股。税率为 40%，没有其他潜在稀释证券。报告稀释每股收益最接近多少?

An analyst gathers the following information about a company's fiscal year ended 31 December.

Net income	€2,500,000
Weighted average common shares outstanding during the year	2,000,000
Convertible preferred shares outstanding	1,000,000
Dividend per convertible preferred share	€1

One convertible preferred share is convertible into two common shares. If the tax rate is 40% and there are no other potentially dilutive securities outstanding, reported diluted EPS is closest to:

A €0.38。

B €0.48。

C €0.63。

答案 / Answer C | 核对 / Review C

基本 EPS = (2,500,000 − 1,000,000×1)/2,000,000 = €0.75。假设优先股转换后，无须支付其股利，分子恢复为净利润 2,500,000；分母增加 2×1,000,000 股，成为 4,000,000。候选稀释 EPS = 2,500,000/4,000,000 = €0.625，低于 €0.75，确属稀释，四舍五入为 €0.63。优先股股利不抵税，40% 税率不参与本题计算。

Basic EPS is (2,500,000 − 1,000,000×1)/2,000,000 = €0.75. Assuming conversion eliminates preferred dividends, the numerator becomes net income of €2,500,000 and the denominator becomes 2,000,000 + 2×1,000,000 = 4,000,000 shares. Candidate diluted EPS is €0.625, below basic EPS, so the security is dilutive and the answer rounds to €0.63. Preferred dividends are not tax-deductible; the 40% tax rate is irrelevant here.

易错点 / Trap 可转优先股加回全额股利；可转债才加回税后利息。最后仍要测反稀释。

Add back full preferred dividends, but after-tax interest for convertible debt; always test for antidilution.

Q121 普通股股利不扣 EPS 分子

Common dividends do not reduce EPS

原题第27页 / Question p. 27 答案第121页 / Solution p. 121 已核对 / Checked

一家公司截至 12 月 31 日的财政年度资料如下：
净利润：€5,000,000
已宣告并支付的普通股股利：€500,000
年度加权平均流通普通股：2,000,000 股
流通可转换优先股：400,000 股
每股可转换优先股股利：€2
每股优先股可转为 6 股普通股，没有其他潜在稀释证券。报告稀释 EPS 最接近多少？

An analyst gathers the following information about a company's fiscal year ended 31 December.

Net income	€5,000,000
Common dividends declared and paid	€500,000
Weighted average common shares outstanding during the year	2,000,000
Convertible preferred shares outstanding	400,000
Dividend per convertible preferred share	€2

One convertible preferred share is convertible into six common shares. If there are no other potentially dilutive securities outstanding, reported diluted EPS should be closest to:

A €0.95。

B €1.02。

C €1.14。

答案 / Answer C | 核对 / Review C

基本 EPS = (5,000,000 − 400,000×2)/2,000,000 = €2.10。假设转换时优先股股利不再支付，分子为 5,000,000；新增普通股 = 400,000×6 = 2,400,000。候选稀释 EPS = 5,000,000/(2,000,000 + 2,400,000) = €1.1364，低于 €2.10，因此报告 €1.14。普通股股利是分配给普通股股东的利润，不从 EPS 分子扣除。

Basic EPS is (5,000,000 − 400,000×2)/2,000,000 = €2.10. Conversion eliminates preferred dividends and adds 400,000×6 = 2,400,000 common shares. Candidate diluted EPS is 5,000,000/4,400,000 = €1.1364, below basic EPS, giving €1.14. Common dividends distribute earnings already attributable to common shareholders and are not deducted from the EPS numerator.

易错点 / Trap 基本 EPS 扣优先股股利，不扣普通股股利；转换后对应优先股股利也不再扣。

Basic EPS deducts preferred, not common, dividends; converted preferred dividends are no longer deducted.

04 现金流量与自由现金流

Cash flows and free cash flow

从权责发生制利润还原现金，并区分股东现金流与全体资本提供者现金流。

Convert accrual profit into cash and distinguish cash available to equity from cash available to all capital providers.

本章 24 题；代表题 Q32、Q38、Q40、Q44、Q102、Q130

先学知识点 / Learn the rules first

1 间接法围绕有没有现金来调整

Indirect CFO reverses non-cash and non-operating effects

从净利润出发，加回折旧、摊销等已扣利润但本期没有现金流出的费用；减去出售长期资产等投资或融资活动中的收益，加回相关损失。处置收益进入利润，但出售资产的全部现金收入属于CFI，不能把收益和现金收入混为一谈。

Start with net income. Add back depreciation, amortization and other non-cash expenses. Remove gains and add back losses associated with investing or financing activities. A disposal gain enters profit, while the full sale proceeds belong in investing cash flow.

CFO = NI + Depreciation and amortization - Non-operating gains + Non-operating losses +/- Other non-cash adjustments - Increase in operating assets + Increase in operating liabilities

对应原题 / Related questions: Q22, Q29, Q32, Q91, Q93

2 经营资产增加减现金 经营负债增加加现金

Operating assets and liabilities have opposite cash effects

应收增加说明收入尚未收现；存货或预付增加说明现金先投入，均从净利润中扣除。应付或经营性应计负债增加说明费用尚未付现，因此加回。只对经营性营运资本这样处理，不把现金本身或融资借款机械套入。若递延税负债减少源于本期损益中的递延税转回，间接法从净利润扣减。

Higher receivables mean revenue not yet collected; higher inventory or prepayments tie up cash. Subtract these increases. Higher operating payables or accruals defer cash payments, so add them. Apply this to operating working capital, not cash itself or financing debt. A DTL decrease through profit or loss is deducted in the indirect reconciliation.

对应原题 / Related questions: Q14, Q17, Q23

3 直接法用余额变动还原收付款

Use balance changes to derive direct cash flows

客户收款等于收入减应收增加；向供应商付款先把销货成本还原成采购额，再扣应付增加。其他经营费用的现金支付等于费用加预付增加、减应计负债增加。应付利息滚动关系是期初余额加费用减实付现金等于期末余额。所有增量统一定义为期末减期初。

Customer collections equal revenue less the increase in receivables. Supplier payments first convert cost of sales to purchases, then subtract the increase in payables. Other operating cash payments add increases in prepayments and subtract increases in accruals. Define every change as ending minus beginning balance.

Cash collected = Revenue - Change in receivables
Cash paid to suppliers = COGS + Change in inventory - Change in payables
Other operating payments = Expense + Change in prepayments - Change in accruals
Ending interest payable = Beginning payable + Interest expense - Cash interest paid

对应原题 / Related questions: Q38, Q43, Q65, Q101, Q130

4 出售设备先算账面额 再还原现金

Derive proceeds from carrying amount and gain or loss

账面额等于成本减累计折旧和累计减值；出售现金等于账面额加收益，或减损失。累计折旧变动有时还要先倒推出已出售设备的累计折旧。卖价不是收益，成本也不是处置时的账面额。

Carrying amount equals cost less accumulated depreciation and impairment. Proceeds equal carrying amount plus a gain or minus a loss. Sometimes the accumulated-depreciation roll-forward is needed to identify depreciation attached to the disposed asset. Sale price is not the same as gain.

Sale proceeds = Carrying amount + Gain = Carrying amount - Loss

对应原题 / Related questions: Q91, Q93, Q102

5 利息和股利先识别准则及题库口径

Identify the standard before classifying interest and dividends

按本题库采用的传统IAS 7口径：IFRS利息支付可列CFO或CFF，股利支付也可列CFO或CFF，分类政策需一致；US GAAP通常将利息支付列CFO、股利支付列CFF。因此把现金流出从CFO移到CFF会提高CFO，但不会创造总现金。第4题因此存在两个分类选项均可能提高CFO的问题。此表用于本题库，不应外推到采用IFRS 18后的所有报表。

Under the traditional IAS 7 treatment used in this bank, IFRS permits interest paid and dividends paid in operating or financing cash flows, with consistent classification. US GAAP generally places interest paid in CFO and dividends paid in CFF. Reclassifying an outflow from CFO to CFF raises CFO without creating cash. Q4 is therefore ambiguous. Do not generalize this bank's table to all post-IFRS 18 reporting.

对应原题 / Related questions: Q4, Q57, Q83, Q105

6 FCFF加回债权人税后利息 FCFE加入净借款

FCFF restores after-tax interest; FCFE includes net borrowing

当利息支付已经包含在CFO中时，FCFF从CFO加回税后利息，再减资本支出；FCFE从CFO减资本支出，再加净借款。净借款等于新借债减还本，净还债则为负数。如果利息已列CFF，不能再无条件套用CFO加税后利息的公式，必须先统一口径。

When interest paid is included in CFO, FCFF adds after-tax interest to CFO and subtracts capital expenditure. FCFE subtracts capital expenditure from CFO and adds net borrowing. Net borrowing equals debt issued less principal repaid. If interest is classified in CFF, first align the cash-flow basis rather than blindly adding after-tax interest again.

FCFF = CFO + Interest x (1 - Tax rate) - Capital expenditure
FCFE = CFO - Capital expenditure + Net borrowing
FCFE = FCFF - Interest x (1 - Tax rate) + Net borrowing

对应原题 / Related questions: Q40, Q44, Q117

7 共同比现金流先看分母口径

Check the denominator in common-size cash flows

可以将项目表示为收入的百分比，也可按总现金流入或总现金流出分别缩放。它们与净现金变动不是同一分母。第110题CFO为净流出750，题库用总流出2500作分母，所以为30%；不能因为净现金减少1000就选75%。成熟公司通常主要靠经营活动产生现金。

Cash-flow items may be scaled by revenue or by total inflows and total outflows, depending on the presentation. These are different from net cash change. In Q110, operating cash use of 750 is compared with total outflows of 2,500, giving 30%, not 75% of the net cash decrease. Mature businesses generally rely on operating cash generation.

对应原题 / Related questions: Q47, Q98, Q110

做题前自检 / Before you answer

每次出现加减号，口头解释现金是已经付了、还没付、已经收了，还是还没收；比只背符号更不容易错。

Explain every sign in terms of cash already paid, not yet paid, already collected or not yet collected.

再用原题举例 / Core original examples

Q32 处置收益与应收变动的间接法 | 代表题

Indirect method with disposal gains and receivables

原题第7页 / Question p. 7 答案第32页 / Solution p. 32 已核对 / Checked

某公司资料如下，单位为千欧元：净利润 143；出售设备收益 20；应收账款减少 38。经营活动现金流是多少？

An analyst gathers the following information (in € thousands) about a company:

Net income	143
Gain on sale of equipment	20
Decrease in accounts receivable	38

Cash flow from operating activities (in € thousands) is.

A 85。

B 161。

C 201。

答案 / Answer B | 核对 / Review B

净利润包含出售设备收益，但资产出售现金属于投资活动，故扣除收益 20。应收减少表示收回以前确认的销售款，应加回 38。因此 CFO=143−20+38=161。这里扣除的是收益，不是设备出售的全部现金所得。

Remove the equipment-disposal gain of 20 from net income because the disposal cash flow belongs in investing activities. A receivables decrease of 38 indicates collection of amounts previously recognized as revenue, so add it. CFO=143−20+38=161. The adjustment removes the gain, not the entire sale proceeds.

易错点 / Trap 出售资产：CFO 扣收益；CFI 列全部实际出售所得。

For an asset disposal, remove the gain from CFO and report the cash proceeds in CFI.

Q38 由销售成本推算向供应商付款 | 代表题

Cash paid to suppliers from cost of sales

原题第8页 / Question p. 8 答案第38页 / Solution p. 38 已核对 / Checked

某公司财年资料如下，单位为百万英镑：销售成本 6,000；存货增加 3,000；应付账款增加 2,500。向供应商支付的现金是多少？

An analyst gathers the following information (in £ millions)about a company's fiscal year.

Cost of goods sold	6,000
Increase in inventory	3,000
Increase in accounts payable	2,500

Cash paid to suppliers (in £ millions)is:

A 6,500。

B 9,000。

C 11,500。

答案 / Answer A | 核对 / Review A

先由已售成本倒推本期采购：采购额=销售成本+存货增加=6,000+3,000=9,000。再扣除尚未付款的采购：现金付款=采购额−应付增加=9,000−2,500=6,500。把“确认成本、购买存货、真正付款”分为三步，就不易混淆。

First infer purchases: cost of sales plus the inventory increase equals 6,000+3,000=9,000. Then remove purchases not yet paid: cash paid=purchases−increase in payables=9,000−2,500=6,500. Keep expense recognition, inventory purchases and actual payment as separate steps.

易错点 / Trap 存货增加加回采购；应付增加从现金付款中扣除。

Add inventory growth to derive purchases; subtract payables growth to derive cash payments.

Q40 从 CFO 计算 FCFF | 代表题

FCFF from operating cash flow

原题第9页 / Question p. 9 答案第40页 / Solution p. 40 已核对 / Checked

某公司资料如下，单位为千欧元：经营现金流 80；资本支出 15；已支付并计入费用的利息 10。若支付利息列为经营现金流，所得税率为 20%，FCFF 是多少?

An analyst gathers the following information (in € thousands) about a company:

Cash flow from operating activities	80
Capital expenditures	15
Interest paid and expensed	10

If interest paid is classified as a cash flow from operating activities and the income tax rate is 20%, FCFF (in € thousands) is

A 57。

B 65。

C 73。

答案 / Answer C | 核对 / Review C

FCFF 是可供全部资本提供者的现金流，不能把给债权人的利息永久扣掉。由于 CFO 已扣利息，需加回税后利息，再扣资本支出：FCFF=CFO+I×(1−t)−Capex=80+10×0.8−15=73。CFO 已包含非现金费用调整，不需要再加一次折旧。

FCFF measures cash available to all capital providers. Since CFO already deducts interest paid, restore after-tax interest and then deduct capital expenditures: FCFF=CFO+I(1−t)−Capex=80+10×0.8−15=73. Non-cash expense adjustments are already embedded in CFO, so depreciation is not added again.

易错点 / Trap 利息已列 CFO 才用这个加回方式；不要既从 CFO 出发又重复加折旧。

This add-back assumes interest is included in CFO; do not also add depreciation again.

Q44 FCFF 与 FCFE 推算净还债 | 代表题

Inferring net debt repayment from FCFF and FCFE

原题第10页 / Question p. 10 答案第44页 / Solution p. 44 已核对 / Checked

某公司资料如下，单位为千英镑：FCFF 2,500；FCFE 1,300；支付利息 260。若支付利息列为经营现金流，税率 40%，净债务偿还金额最接近多少？

An analyst gathers the following information (in £ thousands) about a company.

FCFF	2,500
FCFE	1,300
Interest paid	260

If interest paid is classified as a cash flow from operating activities and the income tax rate is 40%,net debt repayment (in £ thousands) is closest to:

A 940。

B 1,044。

C 1,200。

答案 / Answer B | 核对 / Review B

FCFE=FCFF−税后利息+净借款。净还债与净借款符号相反，因此净还债=FCFF−利息×(1−税率)−FCFE=2,500−260×0.6−1,300=1,044。亦可理解为全部资本现金 2,500 扣税后利息 156 后，剩余 2,344；其中 1,300 归权益，差额 1,044 用于净还债。

FCFE=FCFF−after-tax interest+net borrowing. Net debt repayment is the negative of net borrowing, so repayment=FCFF−I(1−t)−FCFE=2,500−260×0.6−1,300=1,044. After restoring the common cash-flow basis, 2,344 is available; 1,300 remains for equity and 1,044 goes to net debt repayment.

易错点 / Trap 净借款为正会增加 FCFE；净还债为正会减少 FCFE。

Positive net borrowing increases FCFE; positive net repayment reduces it.

Q102 由账面价值和收益还原售价 | 代表题

Reconstructing disposal proceeds

原题第22页 / Question p. 22 答案第102页 / Solution p. 102 已核对 / Checked

一家公司设备资料如下，单位为千欧元：
设备购买价格：1,000
累计折旧：250
出售设备收益：400
忽略税项，设备出售所得款项是多少？

An analyst gathers the following information (in € thousands) about a company's equipment:

Purchase price of the equipment	1,000
Accumulated depreciation	250
Gain on sale of the equipment	400

Ignoring taxes, proceeds from sale of the equipment (in € thousands) is:

A 750。

B 1,150。

C 1,400。

答案 / Answer B | 核对 / Review B

先算账面价值：1,000 − 250 = 750。再加出售收益：出售所得 = 账面价值 + 收益 = 750 + 400 = 1,150 千欧元。A 只算了账面价值；C 把收益加在原始成本上，漏掉累计折旧。

First calculate carrying amount: 1,000 − 250 = 750. Then add the gain to reconstruct proceeds: 750 + 400 = 1,150 thousand euros. A stops at carrying amount; C adds the gain to original cost without deducting depreciation.

易错点 / Trap 售价 = 成本 − 累计折旧 + 出售收益。

Proceeds = cost − accumulated depreciation + gain.

Q130 由收入还原客户收款 | 代表题

Cash received from customers

原题第29页 / Question p. 29 答案第130页 / Solution p. 130 已核对 / Checked

一家公司资料如下，单位为百万美元：
项目：第 2 年；第 1 年
收入：2,100；2,000
应收账款：230；200
现金：70；50
第 2 年从客户收到的现金是多少?

An analyst gathers the following information (in $ millions) about a company:

	Year 2	Year 1
Revenues	2,100	2,000
Accounts receivable	230	200
Cash	70	50

Cash received from customers (in $ millions) in Year 2 is:

A 2,070。

B 2,120。

C 2,130。

答案 / Answer A | 核对 / Review A

客户收款 = 收入 − 应收账款增加 = 2,100 − (230 − 200) = 2,070。应收增加代表已确认的部分收入尚未收现。现金余额从 50 到 70 的变动还包含支付费用、投资、融资等其他活动，不能把这一变动加到收入上来求客户收款。

Cash collected from customers = revenue − increase in receivables = 2,100 − (230 − 200) = 2,070. An increase in receivables means some recognized revenue has not yet been collected. The change in cash balance includes many operating, investing and financing flows and cannot be added to revenue to derive collections.

易错点 / Trap 应收增加要从收入中减去；现金余额变动不是客户收款调整项。

Subtract an increase in receivables; the overall cash-balance change is not a collection adjustment.

同知识点巩固题 / Reinforcement

Q4 IFRS 利息与股利现金流分类

IFRS cash-flow classification of interest and dividends

原题第1页 / Question p. 1 答案第4页 / Solution p. 4 需补条件 / Assumption required

根据 IFRS，针对以下哪项作出的分类选择，最可能使所报告的经营现金流增加？

Under International Financial Reporting Standards (IFRS), reported operating cash flows are most likely to be increased by the classification choice made for.

A 固定资产减值损失。
impairment losses on fixed assets.

B 支付的股利。
dividends paid.

C 利息费用。
interest expense.

答案 / Answer C | 核对 / Review 题面不能唯一确定 / Not uniquely determined

原答案选 C，意图是：按本题采用的传统 IAS 7 口径，把支付利息列入筹资现金流而非经营现金流，CFO 会更高，但现金净变动不变。题干并不严密：支付股利同样允许经营或筹资分类，从经营改列筹资也会提高 CFO，因此 B 不能仅凭原解析排除。减值损失本身是非现金项目；间接法可能加回它，但它不是实际经营现金流出。

The source intends C: under the traditional IAS 7 treatment used by this question, classifying interest paid as financing rather than operating produces higher CFO without changing total cash flow. However, the wording is ambiguous because dividends paid could also move from operating to financing, increasing CFO in the same way. An impairment loss is non-cash; an indirect-method add-back is not an actual operating cash payment.

易错点 / Trap 分类改变只改变 CFO/CFI/CFF 的位置，不创造现金。利息费用也不一定等于现金利息。

Classification changes the category, not total cash. Interest expense also need not equal cash interest paid.

核对说明 / Review note
原答案 C；严格按题面无法唯一排除 B。教学时保留命题意图，但不把错误排除逻辑当规则。本题口径属于 IFRS 18 生效前的 IAS 7 分类选择。
Source answer: C. The wording does not uniquely exclude B. Preserve the intended answer while flagging the ambiguity. The question uses the IAS 7 classification choices preceding IFRS 18.

Q14 营运资本变动与期末现金

Working-capital changes and ending cash

原题第3页 / Question p. 3 答案第14页 / Solution p. 14 已核对 / Checked

某公司年末资料如下：第 2 年应收账款 300 万英镑，第 1 年 100 万英镑；第 2 年应付账款 200 万英镑，第 1 年 500 万英镑。仅依据这些信息，若第 2 年净利润为 300 万英镑，第 1 年末现金为 1,000 万英镑，第 2 年末现金是多少？

An analyst gathers the following year-end information from a company's financial statements:

	Year 2	Year 1
Accounts receivable	£3 million	£1 million
Accounts payable	£2 million	£5 million

Based only on this information, if Year 2 net income is £3 million and the Year 1 ending cash balance is £10 million, the Year 2 ending cash balance is:

A 800 万英镑。
£8 million.

B 1,200 万英镑。
£12 million.

C 1,800 万英镑。
£18 million.

答案 / Answer A | 核对 / Review A

应收增加 200 万，说明已确认但尚未收到的收入增加，需从净利润扣减；应付减少 300 万，说明现金支付超过对应应计费用，也要扣减。现金净变动=300−200−300=−200 万。期末现金=1,000−200=800 万英镑。

Receivables increase by £2 million, reducing cash relative to accrual profit. Payables decrease by £3 million, indicating additional cash paid relative to recognized expenses. The implied cash change is £3−£2−£3=−£2 million. Ending cash is £10−£2=£8 million, choosing A.

易错点 / Trap 经营性资产增加要减，经营性负债减少也要减。

Subtract increases in operating assets and decreases in operating liabilities.

核对说明 / Review note
题目明确“仅依据这些信息”；按其简化设定，视其他非现金调整、投资及筹资现金流为零。真实企业不能仅凭这几个科目完整推出现金变动。
The question explicitly limits the information. Its simplified answer assumes no other non-cash adjustments or investing/financing flows; these few accounts would not fully determine a real company’s cash change.

Q17 递延所得税负债的间接法调整

Indirect-method adjustment for a deferred tax liability

原题第4页 / Question p. 4 答案第17页 / Solution p. 17 已核对 / Checked

用间接法列报经营现金流时，递延所得税负债减少应如何处理?

Under the indirect method of reporting cash flow from operating activities, a decrease in deferred income tax liabilities is:

A 忽略。
ignored.

B 加回净利润。
added back to net income.

C 从净利润中扣减。
subtracted from net income.

答案 / Answer C | 核对 / Review C

在本题的损益相关简化情境中，DTL 减少表示以前递延的税款在本期转回，本期现金税相对于已计入净利润的税费更高。因此由净利润推算 CFO 时应扣减，选 C。对应地，损益相关的 DTL 增加通常加回；DTA 的方向相反。

In the question’s simplified profit-or-loss setting, a decrease in the deferred tax liability represents reversal of previously deferred taxes. Cash taxes are higher relative to the tax expense already deducted in net income, so subtract the decrease in arriving at CFO. A corresponding DTL increase is generally added back; deferred tax asset changes have the opposite sign.

易错点 / Trap 只调整与本期利润相关的非现金税费；不要不分来源地套用全部 DTL 账面变动。

Adjust the deferred-tax component relevant to profit; do not blindly use every movement in the DTL balance.

核对说明 / Review note
原解析称“不论来源的所有 DTL 变动”都调整净利润，过于宽泛；OCI、企业合并等引起的变动须另行分析。
The source overstates that all DTL changes are adjusted regardless of origin. Changes arising in OCI, business combinations or other non-profit items require separate analysis.

Q22 债券折价摊销与非现金调整

Bond discount amortization and non-cash adjustments

原题第5页 / Question p. 5 答案第22页 / Solution p. 22 已核对 / Checked

用间接法编制现金流量表时，以下哪项最可能加回净利润?

Which of the following is most likely added back to net income when preparing a cash flow statement under the indirect method?

A 出售资产收益。
Gain on sale of assets

B 债券折价摊销。
Amortization of bond discount

C 递延所得税负债减少。
Decrease in deferred tax liability

答案 / Answer B | 核对 / Review B

发行债券的折价摊销会增加账面利息费用，却没有对应的本期额外现金支付，因此要加回净利润。出售资产收益已进入利润，但出售所得现金属于投资活动，所以 CFO 调整中扣除该收益。损益相关 DTL 减少也应扣减。

For a bond issuer, amortization of a discount increases accounting interest expense without an equivalent additional current cash payment, so it is added back. A gain on asset disposal is removed from CFO because the disposal proceeds belong in investing cash flows. A profit-related decrease in a DTL is also subtracted.

易错点 / Trap 折价摊销加回；溢价摊销扣减。不要把出售收益当作经营现金流。

Add discount amortization and subtract premium amortization; disposal gains are not operating cash receipts.

Q23 经营性资产与负债的符号

Signs of working-capital adjustments

原题第5页 / Question p. 5 答案第23页 / Solution p. 23 已核对 / Checked

用间接法计算经营现金流时，下列哪项增加，会使经营活动净现金流相对于净利润更高?

With respect to the statement of cash flows under the indirect method, which of the following will increase net cash provided by operating activities compared to net income? An increase in:

A 存货。
inventory

B 应付账款。
accounts payable

C 应收账款。
accounts receivable

答案 / Answer B | 核对 / Review B

应付账款增加表示费用或采购已确认，但部分尚未付现金，因此 CFO 相对于净利润更高。存货增加占用现金；应收增加表示部分销售未收现，二者通常都从净利润中扣减。符号规则是：经营资产增加减，经营负债增加加。

An increase in payables means purchases or expenses have been recognized but some cash payment has been deferred, increasing CFO relative to net income. Inventory growth absorbs cash, and receivables growth means some sales remain uncollected. The general rule is to subtract increases in operating assets and add increases in operating liabilities.

易错点 / Trap 应付增加不是多赚钱，而是暂时少付现金。

Higher payables do not mean more profit; they mean some cash payments have been postponed.

Q29 债务清偿收益与 CFO

Debt-retirement gains and CFO

原题第6页 / Question p. 6 答案第29页 / Solution p. 29 已核对 / Checked

某公司资料如下，单位为千美元：净利润 10,000；债务清偿收益 500；营运资本减少 2,000。经营活动现金流是多少?

An analyst gathers the following information (in $ thousands) about a company.

Net income	10,000
Gain on debt retirement	500
Decrease in working capital	2,000

Cash flow from operating activities (in $ thousands) is:

A 8,500。

B 11,500。

C 12,500。

答案 / Answer B | 核对 / Review B

债务清偿收益已增加净利润，但不是经营活动产生的收益，应从 CFO 的间接法起点扣除。非现金经营营运资本减少释放现金，应加回。因此 CFO=10,000−500+2,000=11,500。

The debt-retirement gain increased net income but relates to financing rather than operations, so remove it from the indirect-method CFO calculation. A reduction in non-cash operating working capital releases cash and is added. CFO=10,000−500+2,000=11,500.

易错点 / Trap 经营营运资本减少加回；非经营收益扣除。

Add a decrease in operating working capital and subtract non-operating gains.

核对说明 / Review note
这里将题中的 working capital 按现金流题常用口径理解为非现金经营营运资本，不含现金及融资债务。
Working capital is interpreted in the cash-flow sense as non-cash operating working capital, excluding cash and financing debt.

Q43 应付利息的滚动关系

Interest payable roll-forward

原题第10页 / Question p. 10 答案第43页 / Solution p. 43 已核对 / Checked

某公司截至 12 月 31 日财年资料如下：1 月 1 日应付利息 £45,000；年内支付现金利息 £15,000；年内利息费用 £50,000。12 月 31 日应付利息是多少?

An analyst gathers the following information about a company's fiscal year ended 31 December.

Interest payable on 1 January	£45,000
Cash interest paid during the year	£15,000
Interest expense during the year	£50,000

Interest payable on 31 December is:

A £30,000。
£30,000.

B £80,000。
£80,000.

C £95,000。
£95,000

答案 / Answer B | 核对 / Review B

应付利息期末余额=期初余额+本期确认利息费用−本期支付利息=45,000+50,000−15,000=£80,000。费用产生新的应付款，支付减少应付款。这个滚动公式也可反推现金利息=利息费用−应付利息增加。

Ending interest payable equals opening payable plus interest expense less cash paid: 45,000+50,000−15,000=£80,000. Expense recognition adds to the liability and payment reduces it. Rearranging gives cash interest paid=interest expense−increase in interest payable.

易错点 / Trap 费用不等于付款；始终写出“期初+新增−结清=期末”。

Expense is not the same as payment; use opening balance plus accruals less settlements.

Q47 现金流量表共同比分析

Common-size cash flow statements

原题第10页 / Question p. 10 答案第47页 / Solution p. 47 已核对 / Checked

在现金流量表的共同比分析中，各项现金流入可以表示为以下哪项的百分比?

In a common-size analysis of the cash flow statement, each line item of cash inflow may be stated as a percentage of:

A 总资产。
total assets.

B 销售收入净额（net revenue）。
net revenue.

C 净现金流。
net cash flow.

答案 / Answer B | 核对 / Review B

现金流量表可采用两种共同比口径：全部项目除以销售收入净额（net revenue）；或各项流入除以总流入、各项流出除以总流出。三个选项中只有销售收入净额（net revenue）符合，所以选B。总资产通常是资产负债表共同比基数，净现金流可能很小或为负，不是这里使用的基数。

Two common approaches divide all cash-flow items by net revenue, or divide inflows by total inflows and outflows by total outflows. Therefore B is correct. Total assets is the usual balance-sheet denominator; net cash flow is not the denominator specified by either approach.

易错点 / Trap 不要把资产负债表的总资产基数搬到现金流量表。

Do not carry the total-assets denominator from the balance sheet into this cash-flow analysis.

Q57 已付利息的现金流分类

Cash-flow classification of interest paid

原题第13页 / Question p. 13 答案第57页 / Solution p. 57 需补条件 / Assumption required

在现金流量表中，已付利息应归入哪类现金流?

On the statement of cash flows, interest paid should be classified as:

A 只能归入融资活动现金流。
a financing cash flow only.

B 只能归入经营活动现金流。
an operating cash flow only.

C 可归入融资活动或经营活动现金流。
either a financing or an operating cash flow.

答案 / Answer C | 核对 / Review C（按所述条件 / under stated assumption）

按所附答案采用的传统IAS 7/IFRS口径，已付利息可一致地归入经营活动或融资活动，所以C正确。US GAAP则将已付利息列入经营活动，若题干指定US GAAP就选B。这里考的是实际支付的利息现金流，不是利润表中利息费用的列报位置。

Under the traditional IAS 7/IFRS treatment assumed by the supplied solution, interest paid can be classified consistently as operating or financing cash flow, answer C. US GAAP classifies interest paid as operating cash flow, which would make B correct if that framework were specified. The question concerns cash paid, not income-statement expense presentation.

易错点 / Trap 先读准则；IFRS可选择不等于US GAAP也可选择。

Identify the reporting framework before choosing the cash-flow category.

核对说明 / Review note
题干未注明准则；所附答案按传统IAS 7的IFRS口径作答。该表述不应被泛化到所有准则或所有后续准则版本。
The stem does not state the framework. The supplied solution follows traditional IAS 7 under IFRS; do not generalize this treatment across frameworks or later standard versions.

Q65 收入转客户收款

Converting revenue to cash collected

原题第14页 / Question p. 14 答案第65页 / Solution p. 65 已核对 / Checked

公司资料（单位：千欧元）：营业收入5,000；年初现金2,000；年末现金2,000；应收账款增加1,200。从客户收到的现金是多少?

An analyst gathers the following information (in € thousands) about a company.

Revenue	5,000
Cash balance, beginning of year	2,000
Cash balance, end of year	2,000
Increase in accounts receivable	1,200

Cash received from customers (in € thousands) is:

A 3,800。

B 5,000。
5.000

C 6,200。

答案 / Answer A | 核对 / Review A

期初应收账款+赊销收入-客户收款=期末应收账款，所以客户收款=收入-应收账款增加=5,000-1,200=3,800，选A。现金期初期末相同反映公司所有现金流的合计，不表示客户收款等于收入；现金余额是干扰数据。

Beginning receivables + revenue − collections = ending receivables. Therefore cash collected = revenue − increase in receivables = 5,000 − 1,200 = 3,800, answer A. Unchanged total cash reflects all cash flows combined and does not mean collections equal revenue; the cash balances are distractors.

易错点 / Trap 应收增加表示收入已确认但还没收回，所以从收入中减。

An increase in receivables represents revenue not yet collected, so subtract it.

Q83 IFRS允许的利息付款分类

Interest paid classification under IFRS

原题第18页 / Question p. 18 答案第83页 / Solution p. 83 已核对 / Checked

在现金流量表中，哪套准则允许将利息付款归为融资活动现金流?

On the statement of cash flows, interest payments may be classified as a financing cash flow under

A 仅IFRS。
IFRS only

B 仅US GAAP。
US GAAP only

C IFRS和US GAAP两者。
both IFRS and US GAAP.

答案 / Answer A | 核对 / Review A

按本题库采用的传统IAS 7口径，IFRS允许将已付利息列入经营或融资活动，US GAAP则列入经营活动，所以A正确。利息付款和归还债务本金要分开判断：本金偿还是融资活动，不表示利息在所有准则下也一定属于融资活动。

Under the traditional IAS 7 treatment used by this question bank, IFRS permits interest paid in operating or financing cash flows, while US GAAP reports it in operating cash flows. Therefore A is correct. Classify interest separately from principal repayment; principal being financing does not make interest financing under every framework.

易错点 / Trap 利息与本金分开判断；不可只按“都与借款有关”分类。

Classify interest separately from principal rather than grouping both solely because they relate to borrowing.

核对说明 / Review note
此答案沿用所附题库的传统IAS 7口径。后续准则版本与生效期应另作说明，不能把不同版本混成同一张无条件规则表。
This answer follows the source bank’s traditional IAS 7 treatment. Later amendments and effective dates should be distinguished rather than combined into an unconditional rule.

Q91 出售长期资产与投资现金流

Asset disposals and investing cash flow

原题第20页 / Question p. 20 答案第91页 / Solution p. 91 已核对 / Checked

一家公司出售账面价值为 £75,000 的物业、厂房及设备（PP&E），并确认 £2,000 的收益。该交易产生的投资活动现金流是多少?

If a company sold PP&E with a carrying amount of £ 75,000 and reported a gain of £ 2,000,cash flow from investing activities is:

A £0。
£ 0.

B £73,000。
£ 73,000.

C £77,000。
£ 77,000.

答案 / Answer C | 核对 / Review C

先把利润与现金分开：出售收益 = 售价 − 账面价值，所以售价 = 75,000 + 2,000 = £77,000。出售固定资产收到的全部款项计入投资现金流，而不是只计入 £2,000 的收益。若用间接法编制经营现金流，出售收益还要从净利润中扣除，以免将投资活动收益留在 CFO 中。

Gain on disposal equals proceeds minus carrying amount. Therefore proceeds are £75,000 + £2,000 = £77,000, all reported as an investing cash inflow. The £2,000 gain is an accounting profit, not the cash proceeds. Under the indirect method, subtract that gain from net income when deriving operating cash flow.

易错点 / Trap 出售收益是差额；投资现金流是实际收到的全部售价。

A disposal gain is the difference; investing cash flow is the full cash proceeds.

Q93 长期资产出售损益

Gain or loss on disposal

原题第20页 / Question p. 20 答案第93页 / Solution p. 93 已核对 / Checked

分析师收集到一家公司出售设备的以下资料，单位为千欧元：
售价：58
历史成本：50
累计折旧：5
出售收益是多少（千欧元）？

An analyst gathers the following information (in € thousands) about a company's sale of equipment.

Selling price	58
Historical cost	50
Accumulated depreciation	5

The gain on the sale (in € thousands) is:

A 3。

B 8。

C 13。

答案 / Answer C | 核对 / Review C

账面价值 = 历史成本 − 累计折旧 = 50 − 5 = 45。出售收益 = 售价 − 账面价值 = 58 − 45 = 13 千欧元。B 把售价直接减去原价，漏掉了折旧；A 把累计折旧错误地加到成本上。

Carrying amount is historical cost minus accumulated depreciation: 50 − 5 = 45. Gain equals proceeds minus carrying amount: 58 − 45 = 13 thousand euros. B ignores depreciation, while A incorrectly adds accumulated depreciation to cost.

易错点 / Trap 先算账面价值，再用售价减账面价值。

Calculate carrying amount first, then subtract it from proceeds.

Q98 成熟企业的现金来源

Cash generation in a mature company

原题第22页 / Question p. 22 答案第98页 / Solution p. 98 已核对 / Checked

对于一家成熟企业，其最主要的现金流来源最可能是什么？

For a mature company, the primary source of cash flows is most likely from

A 经营活动。
operating activities.

B 投资活动。
investing activities.

C 筹资活动。
financing activities.

答案 / Answer A | 核对 / Review A

成熟企业应主要依靠经营活动持续产生现金，用来投资、偿债或向股东分配。出售资产得到的投资现金流和借债、发股得到的筹资现金流可以短期提供资金，但不能长期替代核心经营产生现金的能力。

A mature company is expected to generate its primary cash inflows from operations, supporting investment, debt repayment and distributions. Asset sales and new financing can provide cash temporarily, but they do not replace sustainable operating cash generation.

易错点 / Trap 现金余额增加不等于经营健康，必须看增加来自哪类活动。

A rising cash balance is not sufficient; identify which activity generated it.

Q101 费用转换为现金支付

Converting operating expenses to cash paid

原题第22页 / Question p. 22 答案第101页 / Solution p. 101 已核对 / Checked

一家公司资料如下，单位为百万美元：
其他经营费用：4,500
预付费用减少：200
其他应计负债增加：300
其他经营费用的现金支付额是多少?

An analyst gathers the following information (in $ millions) about a company:

Other operating expenses	4,500
Decrease in prepaid expenses	200
Increase in other accrued liabilities	300

Cash paid for other operating expenses (in $ millions) is:

A 4,000。

B 4,400。

C 4,600。

答案 / Answer A | 核对 / Review A

现金支付 = 费用 + 预付费用增加 − 应计负债增加。本题预付费用减少 200，说明当期一部分费用耗用的是以前已付现金；应计负债增加 300，说明一部分费用当期尚未支付。因此现金支付 = 4,500 − 200 − 300 = 4,000。

Cash paid = expense + increase in prepayments − increase in accrued liabilities. A 200 decline in prepayments means part of this year’ s expense was paid earlier. A 300 increase in accrued liabilities means part remains unpaid. Cash paid is therefore 4,500 − 200 − 300 = 4,000.

易错点 / Trap 预付减少和应付增加都会使当期现金支付低于已确认费用。

Lower prepayments and higher accrued liabilities both reduce cash paid relative to expense.

Q105 股息支付的现金流分类

Classification of dividends paid

原题第23页 / Question p. 23 答案第105页 / Solution p. 105 已核对 / Checked

在现金流量表中，哪套准则允许将已支付的现金股息归类为经营活动?

On the statement of cash flows, cash dividends paid may be classified as an operating activity under.

A 仅 IFRS。
IFRS only.

B 仅 US GAAP。
US GAAP only.

C IFRS 和 US GAAP 均允许。
both IFRS and US GAAP

答案 / Answer A | 核对 / Review A

按照本题库采用的 IFRS 口径，支付股息可列为经营活动或筹资活动；US GAAP 将支付股息列为筹资活动。因此只有 IFRS 允许经营活动分类，选 A。辨认“已支付股息”与“收到股息”，不要把两者混用。

Under the IFRS convention used by this question bank, dividends paid may be classified as operating or financing cash flows. US GAAP classifies dividends paid as financing. Therefore only IFRS permits the operating classification in this question. Distinguish dividends paid from dividends received.

易错点 / Trap 先认 paid/received，再认 IFRS/US GAAP。

Identify paid versus received, then identify IFRS versus US GAAP.

核对说明 / Review note
本题按答案文档使用的分类规则讲解；后续准则生效变化应另作版本核查。
This explanation follows the classification rules used in the supplied answer; subsequent standard changes require a separate version check.

Q110 现金流量表的共同比分析

Common-size cash flow statements

原题第24页 / Question p. 24 答案第110页 / Solution p. 110 已核对 / Checked

一家公司现金流资料如下，单位为百万欧元:
经营活动净现金流：(750)
现金流入总额：1,500
现金流出总额：2,500
现金净增加（减少）：(1,000)
在采用间接法列示的共同比现金流量表中，经营活动净现金流占比是多少?

An analyst gathers the following information (in € millions) about a company:

Net cash flow from operating activities	(750)
Total cash inflows	1,500
Total cash outflows	2,500
Net increase (decrease) in cash	(1,000)

On a common-size statement of cash flows presented using the indirect method, net operating cash flow is:

A 30%。

B 50%。

C 75%。

答案 / Answer A | 核对 / Review A

本题采用“流入占总流入、流出占总流出”的共同比口径。经营净现金流是流出，因此取其流出金额 750 除以现金流出总额 2,500，得到 30%。不能除以总流入 1,500，也不能除以净减少 1,000。

The convention here expresses inflows as a share of total inflows and outflows as a share of total outflows. Net operating cash flow is an outflow, so use its magnitude: 750/2,500 = 30%. Dividing by inflows or by the net change in cash uses the wrong base.

易错点 / Trap 先判断净额是流入还是流出，再选对应总额作为分母。

Determine whether the net amount is an inflow or outflow before choosing the base.

Q117 FCFF 与 FCFE 的关系

The relationship between FCFF and FCFE

原题第26页 / Question p. 26 答案第117页 / Solution p. 117 已核对 / Checked

一家公司资料如下：
利息支付：$30,000
资本支出：$82,000
净借款：$18,000
所得税率：40%
在 US GAAP 下，股权自由现金流（FCFE）最可能与公司自由现金流（FCFF）是什么关系？

An analyst gathers the following information about a company:

Interest payments	$30,000
Capital expenditures	$82,000
Net borrowing	$18,000
Income tax rate	40%

Under U.S. GAAP, free cash flow to equity is most likely.

A FCFE 小于 FCFF。
less than free cash flow to the firm.

B FCFE 等于 FCFF。
equal to free cash flow to the firm.

C FCFE 大于 FCFF。
greater than free cash flow to the firm.

答案 / Answer B | 核对 / Review B

US GAAP 下利息支付计入 CFO。FCFF = CFO + 利息×(1−税率) − CapEx；FCFE = CFO − CapEx + 净借款。税后利息 = 30,000×60% = 18,000，恰好等于净借款，所以两式都等于 CFO − 64,000，FCFE = FCFF。无需知道 CFO 的具体金额。

With interest paid included in CFO, FCFF = CFO + interest(1 − tax rate) − CapEx, while FCFE = CFO − CapEx + net borrowing. After-tax interest is $30,000 × 60% = $18,000, equal to net borrowing. Both cash flows therefore equal CFO − $64,000; no numerical CFO is needed.

易错点 / Trap FCFE − FCFF = 净借款 − 税后利息。

FCFE − FCFF = net borrowing − after-tax interest.

05 存货计价 减记与比率影响

Inventory methods, write-downs and ratio effects

先判断成本流转方法和准则，再决定存货账面值及利润方向。

Identify the cost-flow method and standard before measuring inventory or predicting profit effects.

本章 15 题；代表题 Q13、Q58、Q67、Q94、Q118

先学知识点 / Learn the rules first

1 可变现净值是卖完真正能收回的金额

NRV estimates the amount recoverable through sale

NRV等于预计售价减完工成本、减销售所必需成本，不是重置成本，也不是原始成本。IFRS一般按成本与NRV孰低。US GAAP下FIFO和平均成本法也用成本与NRV孰低；LIFO或零售法仍有成本与market孰低的例外，market以重置成本为基础并受上下限约束。

NRV equals estimated selling price less completion costs and costs necessary to sell. It is not replacement cost or original cost. IFRS generally uses lower of cost and NRV. US GAAP uses that approach for FIFO and average cost, while LIFO and retail methods retain lower-of-cost-or-market rules with a bounded replacement-cost measure.

NRV = Estimated selling price - Completion costs - Selling costs
Inventory under IFRS = min(Cost, NRV)

对应原题 / Related questions: Q59, Q94, Q118

2 减记转回先看IFRS还是US GAAP

Reversal rules depend on the reporting framework

IFRS允许在条件改善时转回先前减记，但只能回到未减记前的成本上限；转回通常减少当期销货成本。US GAAP一般不允许转回以前期间的存货减记。只看到价值回升不够，必须先看适用准则。上述转回针对仍持有的同批存货，并以造成减记的情况消失或NRV恢复的明确证据为前提。

IFRS permits reversal when the reason for a write-down no longer applies, limited to the original write-down so carrying value does not exceed cost. The reversal reduces inventory expense. US GAAP generally prohibits reversal of a prior-period inventory write-down. A recovery in value alone does not determine the answer. This applies to the same inventory still held, when the cause of the write-down has disappeared or clear evidence supports recovery in NRV.

IFRS reversal = max[0, min(Unreversed original write-down, New NRV - Current carrying amount)]

对应原题 / Related questions: Q13, Q50, Q53

3 FIFO把较新的成本留在期末存货

FIFO leaves newer costs in ending inventory

在存货数量稳定、价格上涨且无其他变化时，FIFO的销货成本较低、期末存货和毛利较高；LIFO相反。因此FIFO期末存货更接近当前重置成本，LIFO旧成本层较低，通常较少触发减记。价格下跌时方向反过来：FIFO把较贵旧货成本记入COGS，毛利较低。

With stable quantities and rising costs, FIFO produces lower COGS and higher ending inventory and gross profit than LIFO. FIFO ending inventory is closer to current replacement cost; older, lower LIFO layers are less likely to require write-downs. Falling costs reverse the main directions: FIFO charges older, more expensive units to COGS.

对应原题 / Related questions: Q33, Q52, Q54, Q67

4 减记会机械改善部分周转率

A write-down can mechanically improve turnover ratios

存货减记使资产和权益下降，毛利及净利润通常下降。收入不变、资产分母下降会使总资产周转率上升；流动资产下降会使流动比率下降。周转率的上升可能只是分母缩水，不代表经营效率真的改善。计算存货周转率要用减记后的账面存货，并按题意使用平均余额。

Inventory write-downs reduce assets and equity and generally reduce profit. Unchanged revenue divided by lower assets raises asset turnover, while lower current assets reduce the current ratio. This apparent turnover improvement may be a denominator effect rather than better operations. Use reported inventory after write-downs when computing turnover.

Inventory turnover = COGS / Average reported inventory
Current ratio = Current assets / Current liabilities

对应原题 / Related questions: Q56, Q58, Q63

5 披露题优先排除不适用的准则项目

Eliminate disclosures that do not apply under the framework

常见披露围绕计价政策、存货类别及账面额、销货成本、减记和质押等展开。US GAAP题若出现以前年度存货减记转回及转回原因，通常可排除；重要的LIFO清算收益应关注。第66题的公允价值减销售成本披露，应理解为适用该计量情形时，不能记成每家公司都存在这种存货。

Typical disclosures concern costing policies, inventory categories and carrying amounts, COGS, write-downs and pledged inventory. In US GAAP questions, disclosures about reversal of prior-year write-downs are generally inapplicable. Material income from LIFO liquidation is relevant. Q66's fair-value-less-selling-costs item applies when that measurement situation exists.

对应原题 / Related questions: Q48, Q66

做题前自检 / Before you answer

存货题依次问：什么准则 → 什么成本流转法 → 成本和NRV分别是多少 → 是否允许转回 → 用账面余额还是原始成本。

Ask: which standard, which cost-flow method, what cost and NRV, whether reversal is allowed, and whether the denominator requires carrying value or original cost.

再用原题举例 / Core original examples

Q13 US GAAP 存货减记不得转回 | 代表题

No inventory write-down reversal under US GAAP

原题第3页 / Question p. 3 答案第13页 / Solution p. 13 已核对 / Checked

某公司第 1 年末商品存货资料如下，单位为百万欧元：成本 65，可变现净值 60，当前重置成本 58。第 2 年末，可变现净值比账面价值高 7。按 US GAAP，应转回之前减记的金额是多少?

An analyst gathers the following information (in € millions) relating to a company's merchandise inventory as of 31 December of Year 1:

Cost	65
Net realizable value	60
Current replacement cost	58

On 31 December of Year 2, the net realizable value of the inventory is € 7 million higher than its carrying value. Under US GAAP, the amount (in € millions) of the reversal of the prior write-down is:

A 0。

B 5。

C 7。

答案 / Answer A | 核对 / Review A

US GAAP 不允许转回已确认的存货减记，因此无论后续可变现净值提高多少，本题转回金额都是 0。若换成 IFRS，初始减记为 65−60=5，转回最多 5；那是 B 的干扰逻辑。先识别会计准则，再决定是否需要算金额。

US GAAP prohibits reversing an inventory write-down, so the reversal is zero despite the subsequent increase in net realizable value. Under IFRS, the original write-down would be 65−60=5 and any reversal would be capped at 5; that is the distractor in B. Identify the accounting framework before calculating.

易错点 / Trap 本题的核心是“能否转回”，不是第 2 年涨了多少。

The key issue is whether reversal is allowed, not the size of the subsequent recovery.

Q58 先计量存货再算周转率 | 代表题

Measure inventory before calculating turnover

原题第13页 / Question p. 13 答案第58页 / Solution p. 58 已核对 / Checked

汽车制造商资料（单位：百万欧元）：第2年COGS为600、存货成本100、存货NRV为120；第1年COGS为700、存货成本90、存货NRV为80。按平均存货计算，第2年存货周转率最接近多少?

An analyst gathers the following information (in € millions) about an automobile manufacturer's inventory:

	Year 2	Year 1
Cost of goods sold	600	700
Cost of inventory	100	90
Net realizable value of inventory	120	80

The inventory turnover (calculated using average inventory) in Year 2 is closest to:

A 6.0。

B 6.3。

C 6.7。

答案 / Answer C | 核对 / Review C

先用成本与NRV孰低确定两期账面存货：第1年min(90,80)=80；第2年min(100,120)=100。平均存货=(80+100)÷2=90。第2年存货周转率=600÷90=6.67，选C。不能直接平均两期成本，也不能直接平均两期NRV。

First determine reported inventory at lower of cost and NRV: Year 1 = min(90,80) = 80; Year 2 = min(100,120) = 100. Average inventory is 90. Year 2 inventory turnover = 600/90 = 6.67, answer C. Averaging raw costs or raw NRVs before applying the measurement rule gives the distractors.

易错点 / Trap 先逐年取min，再求平均；顺序不能颠倒。

Apply the lower-of rule separately for each year, then average the carrying amounts.

核对说明 / Review note
讲解沿用所附答案的IFRS成本与NRV孰低口径。
The explanation follows the supplied solution’s IFRS lower-of-cost-and-NRV basis.

Q67 价格下降时FIFO的销售成本 | 代表题

FIFO cost of sales when prices decline

原题第15页 / Question p. 15 答案第67页 / Solution p. 67 已核对 / Checked

其他条件相同，存货单位成本下降、存货数量保持不变时，哪种成本流转方法最可能把较多的可供销售商品成本分配至利润表中的销售成本?

All else being equal, in a period of declining inventory unit costs and constant inventory quantities, which of the following inventory valuation methods most likely allocates a higher amount of the total cost of goods available for sale to cost of sales on the income statement?

A FIFO。

B LIFO。

C 加权平均成本法。
Weighted average cost

答案 / Answer A | 核对 / Review A

价格下降时，早期存货比近期存货贵。FIFO先把早期较贵的成本转入COGS，因此COGS最高，选A；LIFO先费用化近期便宜存货，COGS较低；加权平均通常居中。不要机械背“FIFO利润高”，那只适用于价格上升的相应条件。

When prices decline, older units cost more than newer units. FIFO transfers the older, more expensive costs to COGS first, producing the highest COGS among these methods, answer A. LIFO expenses the cheaper recent costs, while weighted average generally lies between them. The familiar “FIFO gives higher profit” result applies to rising, not falling, costs.

易错点 / Trap 成本方向变了，FIFO与LIFO的利润关系也会反转。

The profit ranking of FIFO and LIFO reverses when the direction of prices reverses.

Q94 可变现净值与账面价值 | 代表题

Net realizable value versus carrying amount

原题第21页 / Question p. 21 答案第94页 / Solution p. 94 已核对 / Checked

一家制造企业期末存货资料如下，单位为千欧元：
期末存货成本：750
正常经营过程中的预计售价：1,100
销售所必需的预计成本：50
使存货达到可出售状态的预计成本：50
存货的可变现净值是多少（千欧元）？

An analyst gathers the following information (in € thousands) about a manufacturing company's inventory:

Cost of ending inventory	750
Estimated selling price in the ordinary course of business	1,100
Estimated costs necessary to sell the inventory	50
Estimated costs to get the inventory in condition for sale	50

The net realizable value of the inventory (in € thousands) is:

A 750。

B 850。

C 1,000。

答案 / Answer C | 核对 / Review C

可变现净值 NRV = 预计售价 − 完工成本 − 销售成本 = 1,100 − 50 − 50 = 1,000。题目问的是 NRV，不是按成本与 NRV 孰低计量后的账面价值。若另问该计量口径下的账面价值，才是 min(750, 1,000) = 750。

NRV equals estimated selling price less completion costs and selling costs: 1,100 − 50 − 50 = 1,000. The question asks for NRV, not the lower-of-cost-and-NRV carrying amount. The latter would be min(750, 1,000) = 750.

易错点 / Trap NRV 是估值输入；账面价值还要与成本比较。

NRV is a measurement input; carrying amount may require a comparison with cost.

Q118 US GAAP 的 FIFO 存货计量 | 代表题

FIFO inventory measurement under US GAAP

原题第26页 / Question p. 26 答案第118页 / Solution p. 118 已核对 / Checked

一家采用 US GAAP 并使用先进先出法（FIFO）的制造企业，应按哪两者中的较低者计量产成品存货?

A manufacturing company reporting under US GAAP using the FIFO inventory valuation method should measure its finished goods' inventory at the lower of.

A 成本和市场价值。
cost and market value.

B 成本和可变现净值。
cost and net realizable value.

C 市场价值和可变现净值。
market value and net realizable value.

答案 / Answer B | 核对 / Review B

US GAAP 下，使用 FIFO 等非 LIFO、非零售存货方法的存货，适用成本与可变现净值孰低。不能把 US GAAP 所有存货一概记成“成本与市场孰低”：LIFO 或零售存货方法才保留相应的市场口径规则。

US GAAP inventory measured using FIFO, rather than LIFO or the retail inventory method, is measured at the lower of cost and NRV. Do not memorize lower of cost or market as a rule for every US GAAP inventory method; LIFO and retail inventory retain that distinct framework.

易错点 / Trap 先认方法：FIFO → cost/NRV；LIFO 或 retail → 另查 market 规则。

Identify the method first: FIFO uses cost/NRV; LIFO and retail require the market framework.

同知识点巩固题 / Reinforcement

Q33 物价上升时 LIFO 的存货账面价值

LIFO inventory carrying value during rising costs

原题第7页 / Question p. 7 答案第33页 / Solution p. 33 已核对 / Checked

根据 US GAAP，在其他条件不变、存货数量稳定且单位成本上涨时，哪种计价方法最不容易发生存货减记?

Under US GAAP and all else being equal, in a period of stable inventory quantities and rising inventory unit costs, which inventory valuation method is least likely to incur inventory write-downs?

A FIFO。

B LIFO。

C 加权平均成本。
Weighted average cost

答案 / Answer B | 核对 / Review B

LIFO 把较新的高成本计入销售成本，期末存货保留较旧的低成本。因此在成本持续上涨时，LIFO 的存货账面价值已经较低，跌到需要减记的概率通常较小。FIFO 的期末存货更接近新近高成本，减记风险相对更大。

LIFO places newer, higher costs in cost of sales and leaves older, lower costs in ending inventory. With rising costs and stable quantities, that already-low carrying amount is less likely to require a write-down. FIFO leaves more recent, higher costs in inventory and therefore has relatively greater write-down exposure.

易错点 / Trap 这里比较的是减记可能性，不是利润高低；物价上涨时 LIFO 通常利润较低。

The question compares write-down likelihood, not profit; LIFO generally reports lower profit when costs rise.

Q48 存货披露与LIFO清算

Inventory disclosures and LIFO liquidation

原题第11页 / Question p. 11 答案第48页 / Solution p. 48 已核对 / Checked

根据美国会计准则，以下哪些存货相关事项需要在财务报表中披露?

Under US GAAP, which of the following is a required financial statement disclosure concerning inventory?

A 仅LIFO存货清算产生的重大收益金额。
Only the material amount of income resulting from the liquidation of LIFO inventory

B 仅本期作为销售成本减少而确认的存货减记转回金额。
Only the amount of any reversal of any write-down that is recognized as a reduction in cost of goods sold in the period

C 上述LIFO清算重大收益金额及存货减记转回金额两者。
Both the material amount of income resulting from the liquidation of LIFO inventory, and the amount of any reversal of any write-down that is recognized as a reduction in cost of goods sold in the period

答案 / Answer A | 核对 / Review A

US GAAP下，LIFO清算可能把以前低成本存货释放到销售成本，从而抬高本期利润，重大影响需要披露。普通存货的以前年度减记不允许转回，因此B、C所说的减记转回披露不适用。答案A中的“仅”是相对于题目列出的两项，不表示全部存货披露只有这一项。

A material earnings effect from a LIFO liquidation must be disclosed. US GAAP generally prohibits reversal of previous inventory write-downs, so the reversal disclosures in B and C do not apply. The word “only” compares the two listed items; it does not mean that this is the sole inventory disclosure requirement.

易错点 / Trap LIFO清算的利润提升可能缺乏持续性。

An earnings boost from a LIFO liquidation may not be sustainable.

Q50 存货减记转回上限

Limit on inventory write-down reversals

原题第11页 / Question p. 11 答案第50页 / Solution p. 50 需补条件 / Assumption required

电子制造商存货资料：第2年成本€100,000、可变现净值€105,000；第1年成本€100,000、可变现净值€97,000。由于减记转回，公司第2年的销售成本应减少多少?

An analyst gathers the following information about an electronics manufacturing company's inventory:

	Year 2	Year 1
Cost	€100,000	€100,000
Net realizable value	€105,000	€97,000

As a result of the reversal of the write-down, the company's Year 2 financial statements should report a decrease in cost of sales of:

A €0。

B €3,000。

C €8,000。

答案 / Answer B | 核对 / Review B（按所述条件 / under stated assumption）

按答案采用的IFRS口径，第1年减记100,000-97,000=3,000。第2年可变现净值恢复到105,000，但存货账面额最多恢复到成本100,000，因此转回3,000，并使销售成本减少3,000，选B。8,000是可变现净值的增幅，超过以前减记额，不能全额转回。US GAAP一般禁止这种转回，届时为A。

Under the solution’s IFRS assumption, Year 1 write-down = 100,000 − 97,000 = 3,000. The Year 2 inventory carrying amount cannot exceed its 100,000 cost, so the reversal and reduction in cost of sales are 3,000, answer B. The 8,000 rise in NRV exceeds the original write-down. Under US GAAP, the reversal would generally be zero, answer A.

易错点 / Trap 转回上限是原先减记额，账面额上限是成本。

The reversal is capped at the original write-down, and the carrying amount at cost.

核对说明 / Review note
题干未明确会计准则；所附答案按IFRS选择B。若采用US GAAP则选择A。
The stem does not identify the accounting framework. The supplied solution assumes IFRS and selects B; US GAAP would generally give A.

Q52 价格下降时的LIFO

LIFO when inventory costs fall

原题第12页 / Question p. 12 答案第52页 / Solution p. 52 已核对 / Checked

其他条件相同，存货数量稳定、单位成本下降时，使用LIFO而不是FIFO会导致哪项更低?

All else being equal, in a period of stable inventory quantities and declining inventory unit costs, using the LIFO inventory valuation method will result in a lower.

A 毛利润。
gross profit than if the FIFO inventory valuation method had been used.

B 流动比率。
current ratio than if the FIFO inventory valuation method had been used.

C 存货周转率。
inventory turnover ratio than if the FIFO inventory valuation method had been used.

答案 / Answer C | 核对 / Review C

价格下降时，LIFO把较新的低成本先计入销售成本，留下较旧的高成本存货，因此COGS更低、期末存货更高。存货周转率=COGS÷平均存货，分子低、分母高，周转率下降，选C。较低COGS使毛利润升高；较高存货使流动比率升高，所以A、B不对。

With falling costs, LIFO expenses newer, cheaper units and leaves older, more expensive inventory. COGS is lower and inventory higher. Inventory turnover = COGS/average inventory therefore falls, answer C. Lower COGS raises gross profit, while higher inventory raises the current ratio, eliminating A and B.

易错点 / Trap 先判断新货贵还是便宜，再判断LIFO的销售成本。

First decide whether newer inventory is cheaper or more expensive; then derive LIFO COGS.

Q53 存货转回及原题数据核对

Inventory reversal and a source-data mismatch

原题第12页 / Question p. 12 答案第53页 / Solution p. 53 原文数字问题 / Source discrepancy

制造商存货资料（单位：百万欧元）：原始成本22,000；第1年末可变现净值1,700；第2年末可变现净值2,500。第2年末资产负债表中的存货应为多少?

An analyst collects the following information (in € millions) about a manufacturing company's inventory.

Original cost	22,000
Net realizable value at end of Year 1	1,700
Net realizable value at end of Year 2	2,500

At the end of Year 2, the balance sheet should reflect inventory (in € millions) of.

A 1,700。

B 2,000。

C 2,500。

答案 / Answer B | 核对 / Review C（按原题22,000 / using printed cost）

本题原题与答案使用不同数据。按原题成本22,000并沿用答案的IFRS口径，第1年账面额为1,700，第2年可恢复到min(22,000,2,500)=2,500，应选C。答案文档却按原始成本2,000计算：只转回300，恢复至2,000，因而给B。若适用US GAAP且无新存货影响，通常仍为1,700，选A。

The question and solution use different costs. Using the printed cost of 22,000 and the solution’s IFRS framework, Year 2 inventory is min(22,000, 2,500) = 2,500, answer C. The supplied solution instead assumes a 2,000 original cost and reverses only 300 to reach 2,000, answer B. Under US GAAP, the previous write-down would generally remain unreversed, giving A.

易错点 / Trap 先核对数据和准则，再用“成本与NRV孰低”。不要为了对答案而改题。

Check both the data and framework before applying lower of cost and NRV; do not alter the question to fit the key.

核对说明 / Review note
已视觉核验：原题PDF第12页确实为22,000；答案PDF第53页反复按2,000解答。核对答案C以IFRS为前提；题干本身也未写明准则。

Visual inspection confirms 22,000 on question PDF page 12, while solution page 53 repeatedly uses 2,000. Checked answer C assumes IFRS; the question itself also omits the framework.

Q54 FIFO存货接近现行成本

FIFO ending inventory and current costs

原题第12页 / Question p. 12 答案第54页 / Solution p. 54 已核对 / Checked

价格和存货数量持续上升时，哪种方法下报告的期末存货最接近当前重置成本?

In an environment of steadily increasing prices and quantities, reported ending inventory most closely reflects current replacement value under the:

A 采用定期盘存制的FIFO。
FIFO method using a periodic inventory system.

B 采用定期盘存制的LIFO。
LIFO method using a periodic inventory system.

C 采用永续盘存制的LIFO。
LIFO method using a perpetual inventory system.

答案 / Answer A | 核对 / Review A

FIFO假设最早买入的存货先售出，期末留下最近买入的存货，因此资产负债表上的存货金额更接近当前重置成本，选A。LIFO更接近现行成本的是销售成本，而期末存货往往包含较旧成本。FIFO下定期与永续盘存制通常给出相同的期末存货与COGS。

FIFO sends the oldest costs to COGS and leaves the most recent purchases in ending inventory. The balance-sheet carrying amount therefore more closely approximates current replacement cost, answer A. Under LIFO, COGS rather than ending inventory is closer to current costs. FIFO generally gives the same allocation under periodic and perpetual systems.

易错点 / Trap FIFO看资产负债表的新成本，LIFO看利润表的新成本。

FIFO leaves recent costs on the balance sheet; LIFO sends recent costs to the income statement.

Q56 存货减记对比率的影响

Ratio effects of an inventory write-down

原题第12页 / Question p. 12 答案第56页 / Solution p. 56 已核对 / Checked

其他条件相同，制造商存货减记最可能产生什么结果?

All else being equal, a write-down of inventory by a manufacturing company most likely results in a:

A	总资产周转率降低，流动比率降低。 lower total asset turnover ratio and a lower current ratio.
B	总资产周转率提高，流动比率降低。 higher total asset turnover ratio and a lower current ratio.
C	总资产周转率降低，流动比率提高。 lower total asset turnover ratio and a higher current ratio.

答案 / Answer B | 核对 / Review B

存货减记减少存货和总资产。收入不变时，总资产周转率=收入÷平均总资产，分母减少使比率提高；流动比率=流动资产÷流动负债，分子减少使比率下降，所以B正确。比率变好来自资产账面额缩水，不能直接解释为经营效率改善。

The write-down reduces inventory and total assets. With revenue unchanged, total asset turnover rises because its denominator falls. The current ratio falls because current assets decrease while current liabilities are unchanged. Thus B is correct. The higher turnover is an accounting-denominator effect, not proof of better operating performance.

易错点 / Trap 总资产周转率和流动比率的存货分别位于分母与分子。

Inventory affects the denominator of total asset turnover but the numerator of the current ratio.

Q59 NRV与LIFO市场价值的区别

NRV versus market under the LIFO exception

原题第13页 / Question p. 13 答案第59页 / Solution p. 59 需补条件 / Assumption required

电子制造商存货资料（单位：千欧元）：期末存货成本3,600；可变现净值3,300；当前重置成本3,200；可变现净值减正常利润3,100。资产负债表上存货账面额是多少?

An analyst gathers the following information (in € thousands) about an electronics manufacturing company's inventory:

Cost of ending inventory	3,600
Net realizable value	3,300
Current replacement cost	3,200
Net realizable value less a normal profit margin	3,100

The inventory (in € thousands) is carried on the balance sheet at:

A 3,100。

B 3,200。

C 3,300。

答案 / Answer C | 核对 / Review C（按所述条件 / under stated assumption）

按答案的IFRS口径，账面额=min(成本3,600，NRV3,300)=3,300，选C；重置成本及利润下限是干扰数据。若题目改为US GAAP并使用LIFO/零售法，市场价值以重置成本3,200为基础，夹在3,100和3,300之间，因此取3,200，届时会选B。

Under the solution’s IFRS assumption, inventory = min(cost 3,600, NRV 3,300) = 3,300, answer C. Replacement cost and the normal-profit floor are distractors. Under US GAAP LIFO or the retail method, market would be the 3,200 replacement cost bounded by the 3,100 floor and 3,300 ceiling, giving B instead.

易错点 / Trap 看到replacement cost不要立即使用；先判断是否为US GAAP的LIFO/零售法例外。

Replacement cost matters here only after identifying the relevant US GAAP LIFO/retail exception.

核对说明 / Review note
题干缺少会计准则与成本流转方法；答案按IFRS选C，而US GAAP的LIFO/零售法情形会选B。
The framework and cost-flow method are missing. The solution selects C under IFRS; the US GAAP LIFO/retail exception would select B.

Q63 存货减记造成的表面效率提升

Apparent efficiency gains after an inventory write-down

原题第14页 / Question p. 14 答案第63页 / Solution p. 63 已核对 / Checked

与未发生存货减记相比，以下哪类比率最可能因减记而改善？

Which of the following ratios would most likely be positively affected by an inventory write-down compared to its value absent the write-down?

A 营运能力比率。
Activity

B 流动性比率。
Liquidity

C 偿债能力比率。
Solvency

答案 / Answer A | 核对 / Review A

存货减记降低资产账面基数，销售额不变时总资产周转率上升，存货周转率也可能因分母减少而上升，因此题库答案是营运能力比率A。与此同时流动资产和权益减少，流动性及以杠杆衡量的偿债能力通常变差。这里的“改善”是比率表象，不能证明业务真的变好。

A write-down reduces the asset base, raising total asset turnover when revenue is unchanged; inventory turnover can also rise. Thus the intended answer is activity ratios, A. Current assets and equity fall, generally weakening liquidity and leverage-based solvency measures. The apparent improvement is mechanical and does not demonstrate better operations.

易错点 / Trap 比率更漂亮可能只是减值把分母压低。

A better-looking ratio can simply reflect a smaller accounting denominator.

Q66 US GAAP存货披露的排除法

Eliminating inapplicable US GAAP inventory disclosures

原题第15页 / Question p. 15 答案第66页 / Solution p. 66 已核对 / Checked

以下哪项是美国会计准则要求的存货相关财务报表披露?

Which of the following is an inventory-related financial statement disclosure required under US GAAP?

A 按公允价值减出售成本计量的存货账面金额。
The carrying amount of inventories carried at fair valueless costs to sell.

B 导致以前年度存货减记转回的情况或事件。
The circumstances or events that led to the reversal of a prior-year write-down of inventories.

C 本期作为销售成本减少确认的以前年度存货减记转回金额。
The amount of reversal of any prior-year write-down of inventories that is recognized as a reduction in cost of sales in the current period.

答案 / Answer A | 核对 / Review A

按所附答案的考试分类选择A，并理解为采用该计量基础的相关存货所需的披露。B和C都以以前年度存货减记可以转回为前提，而US GAAP一般不允许普通存货减记转回，因此不适用。不能由A反推所有US GAAP存货都必须按公允价值减出售成本计量。

The supplied key selects A, understood as a disclosure for relevant inventories measured on that basis. B and C both assume reversal of a prior inventory write-down, which US GAAP generally prohibits, so those reversal disclosures do not apply. A must not be read as requiring all US GAAP inventory to be measured at fair value less selling costs.

易错点 / Trap 披露某种计量金额，不等于所有存货都必须用这种计量方法。

A disclosure about a measurement basis is not a requirement to use that basis for every inventory item.

核对说明 / Review note
A沿用所附题库的披露分类，并限于适用的计量情形；本题重点是排除US GAAP通常不允许的存货减记转回，不泛化为完整的US GAAP披露清单。
A follows the supplied question bank’s disclosure classification and is limited to applicable measurement cases. The main lesson is exclusion of reversal disclosures, not a complete universal US GAAP disclosure checklist.

06 长期资产 无形资产与减值

Long-lived assets, intangibles and impairment

先确定能否资本化及后续计量模式，再处理折旧 减值 重估和处置。

Establish capitalization and the subsequent measurement model before dealing with depreciation, impairment, revaluation and disposal.

本章 19 题；代表题 Q70、Q75、Q104、Q109

先学知识点 / Learn the rules first

1 资本化是延后确认费用

Capitalization defers expense recognition

资本化先把支出记为资产，以后通过折旧 摊销或减值进入费用。与立即费用化相比，当期利润和资产通常较高；同一笔支出若由经营现金流转为投资现金流，CFO较高而CFI较低，总现金不因分类而改变。第24题的比较以外购资本化、内部开发主要费用化为前提，并非所有内部开发都必须费用化。

Capitalization records an asset first and expenses it later through depreciation, amortization or impairment. Relative to immediate expensing, current profit and assets are usually higher. Moving the same payment from operating to investing cash flow raises CFO and lowers CFI without changing total cash. Q24 assumes purchased intangibles are capitalized while the internal costs compared are expensed.

对应原题 / Related questions: Q24

2 研究与开发不能混成一项

Separate research from development

IFRS研究阶段支出费用化；开发阶段只有满足技术可行性 完成意图 资源 未来经济利益及可靠计量等条件后，应将符合条件的开发支出资本化。US GAAP一般将研发费用化，但软件等存在具体例外。第15题答案600采用IFRS的开发资本化前提，不能把研究900一起计入资产。 条件满足前已费用化的支出，不追溯恢复为资产。

IFRS expenses research. Development expenditure is capitalized only after the required feasibility, intention, resources, future benefits and reliable-measurement criteria are met. US GAAP generally expenses R&D, subject to specific exceptions such as certain software costs. Q15's 600 answer assumes IFRS development criteria are met. Capitalization is required once all criteria are met; costs expensed before that point are not reinstated.

对应原题 / Related questions: Q15

3 有限寿命摊销 不确定寿命测试减值

Finite lives are amortized; indefinite lives require impairment tests

有限寿命无形资产在使用年限内摊销；不确定寿命不是永久不失效，而是目前无法预见带来现金流期限的终点，通常不摊销但每年测试减值。能以极低成本持续续期的许可证可能具有不确定寿命。收购形成的商誉在本题库的上市公司一般口径下资本化且每年测试减值，不按固定年限摊销。

Finite-lived intangibles are amortized over useful life. Indefinite life means no foreseeable limit to the period of cash inflows, not immortality; such assets are generally not amortized but tested annually for impairment. A low-cost renewable license may qualify. Acquired goodwill follows the bank's general public-company model of capitalization and annual impairment testing.

对应原题 / Related questions: Q92, Q109

4 IFRS减值先选较高的可收回金额

IFRS impairment uses the higher recoverable amount

使用价值是未来现金流的现值；出售净值是公允价值减处置成本。可收回金额取这两者较高值，再与账面额比较。不是在所有给出的数字中找最小值。符合条件的非商誉减值可转回，但不能超过假如从未减值时的账面额；商誉减值不得转回。

Value in use is the present value of future cash flows. The sale-based measure is fair value less disposal costs. Recoverable amount is the higher of the two; compare it with carrying amount. Do not choose the lowest number in the question. Eligible non-goodwill impairments can reverse, capped at the carrying amount that would exist without impairment; goodwill impairment cannot reverse.

Recoverable amount = max(Value in use, Fair value - Disposal costs)
Impairment loss = max(0, Carrying amount - Recoverable amount)

对应原题 / Related questions: Q55, Q62, Q75, Q112

5 US GAAP持有使用资产先做未折现测试

US GAAP held-for-use assets first undergo an undiscounted test

对本题涉及的持有使用的有形资产及有限寿命无形资产，先将账面额与未折现未来现金流比较；只有未通过可收回性测试，才减记至公允价值。它与IFRS的一步可收回金额方法不同。第62题在IFRS下选17,400，在US GAAP下因22,000未折现现金流高于20,000账面额而不减值；第112题也会因准则不同得出不同选项。 这类资产按US GAAP确认的减值一般不得转回。

For the held-for-use tangible and finite-lived intangible assets in this bank, US GAAP first compares carrying amount with undiscounted future cash flows. Only after failing that recoverability test is the asset written down to fair value. Q62 gives 17,400 under IFRS but no impairment under US GAAP because 22,000 exceeds the 20,000 carrying amount. Q112 is similarly framework-dependent. Such US GAAP impairment losses generally cannot be reversed.

对应原题 / Related questions: Q62, Q112

6 重估上调通常先入OCI 下调先冲相关盈余

Revaluation gains and losses depend on prior revaluations

IFRS重估模式下，首次上调通常计入OCI形成重估盈余；后续下调先冲减同一资产已有重估盈余，超出部分计入损益。上调若是在转回以前计入损益的减值或重估损失，应先按规定计入损益。资产重估增加A及E、债务不变，所以债务资产比及A/E通常下降。US GAAP下本题的版权只能用成本模式。

Under IFRS revaluation, an initial upward revaluation generally goes to OCI and revaluation surplus. A later decrease first uses that asset's surplus, with excess charged to profit or loss. An increase reversing a previous profit-or-loss decrease is treated accordingly. Raising assets and equity with debt unchanged generally lowers debt/assets and assets/equity. Q128's US GAAP copyright uses the cost model.

对应原题 / Related questions: Q31, Q49, Q104, Q128

7 折旧估计变更向前适用 处置要移除相关累计折旧

Apply estimate changes prospectively and remove disposal balances

残值和使用寿命变化属于估计变更，未来折旧使用更新后的可折旧金额和剩余寿命。处置设备时，把其成本及对应累计折旧都移除。第70题需要从期初累计折旧 加当期折旧 减期末累计折旧，倒推出已出售设备的累计折旧。老旧资产账面额较低，可能机械抬高固定资产周转率。

Changes in residual value and useful life are estimates applied prospectively. A disposal removes both asset cost and the associated accumulated depreciation. Q70 derives the depreciation removed from beginning accumulated depreciation plus current expense minus ending accumulated depreciation. Older assets can mechanically inflate fixed-asset turnover because their net carrying amount is lower.

Accumulated depreciation removed = Beginning accumulated depreciation + Depreciation expense - Ending accumulated depreciation

对应原题 / Related questions: Q68, Q70, Q89

8 减值 终止确认和披露分开判断

Separate impairment, derecognition and disclosure

减值通常降低当期净利率并降低资产及权益；债务不变时债务权益比上升。彻底弃置且不再产生经济利益的资产应终止确认，不把弃置时公允价值当作已经收取的现金。成本模式下常见披露包括成本总额 累计折旧或减值以及折旧方法和使用寿命等；不要把IFRS重估信息当成US GAAP必需项目。

Impairment generally reduces profit margin, assets and equity; debt/equity rises if debt is unchanged. An abandoned asset with no remaining economic benefits is derecognized; fair value on abandonment is not cash received. Cost-model disclosures include gross carrying amounts, accumulated depreciation or impairment and relevant depreciation policies. IFRS revaluation disclosures are not US GAAP requirements.

对应原题 / Related questions: Q78, Q88, Q113, Q115

做题前自检 / Before you answer

减值题先圈出IFRS或US GAAP；再分别标注账面额 公允价值 净出售价值 使用价值 未折现现金流，避免拿错数字。

Circle the reporting framework, then label carrying amount, fair value, net disposal value, value in use and undiscounted cash flows before calculating.

再用原题举例 / Core original examples

Q70 由累计折旧推算出售收款 | 代表题

Deriving disposal proceeds from accumulated depreciation

原题第15页 / Question p. 15 答案第70页 / Solution p. 70 已核对 / Checked

公司设备资料：期初累计折旧€7,000,000；期末累计折旧€8,000,000；本期设备折旧费用€4,000,000。公司出售历史成本€5,000,000的设备，确认出售损失€250,000。出售设备收到多少现金?

An analyst gathers the following information about a company's equipment base:

Beginning balance accumulated depreciation	€7,000,000
Ending balance accumulated depreciation	€8,000,000
Depreciation expense of equipment	€4,000,000

The company sold equipment having a historical cost of €5,000,000 and reported a loss on sale of €250,000. The cash received from the sale of equipment is:

A €750,000。

B €1,750,000。

C €4,750,000。

答案 / Answer B | 核对 / Review B

先还原售出资产的累计折旧：7,000,000+4,000,000-8,000,000=3,000,000。售出资产账面额=5,000,000-3,000,000=2,000,000。既然损失250,000，收款=账面额-损失=1,750,000，选B。全年折旧费用不是售出设备的累计折旧。

Accumulated depreciation removed on sale = beginning balance + depreciation expense − ending balance = 7m + 4m − 8m = 3m. The disposed asset’s carrying amount is 5m − 3m = 2m. Proceeds = carrying amount − disposal loss = 2m − 0.25m = 1.75m, answer B. Annual depreciation expense is not the disposed asset’s accumulated depreciation.

易错点 / Trap 累计折旧滚动表先求“被移除部分”，再求账面额和现金售价。

Use the accumulated-depreciation roll-forward to find the removed amount before calculating book value and proceeds.

Q75 可收回金额的两条路径 | 代表题

The two components of recoverable amount

原题第17页 / Question p. 17 答案第75页 / Solution p. 75 需补条件 / Assumption required

设备资料（单位：千欧元）：减值测试前账面额10,000；公允价值9,000；预计未来现金流现值7,000；出售成本200。减值后的设备账面额是多少？

An analyst gathers the following information (in € thousands) about equipment

Carrying amount prior to testing for impairment	10,000
Fair value	9,000
Present value of expected future cash flows	7,000
Costs to sell	200

The equipment's carrying amount (in € thousands) after impairment is:

A 7,000。

B 8,800。

C 9,000。

答案 / Answer B | 核对 / Review B（按所述条件 / under stated assumption）

按答案采用的IFRS口径，公允价值减出售成本=9,000-200=8,800；使用价值=7,000；可收回金额取较高者8,800。原账面额10,000超过8,800，确认减值1,200，减值后8,800，选B。A错误取了较低值，C忘记扣出售成本。

Under the solution’ s IFRS assumption, fair value less selling costs is 9,000 − 200 = 8,800 and value in use is 7,000. Recoverable amount is the higher value, 8,800. The impairment is 10,000 − 8,800 = 1,200, leaving 8,800, answer B. A takes the lower amount, while C fails to deduct selling costs.

易错点 / Trap Recoverable amount取max；确认减值后不能超过原账面额。

Recoverable amount uses the higher of the two values; impairment testing does not automatically revalue an asset upward.

核对说明 / Review note
题干未明确准则；所附答案按IAS 36/IFRS作答。若要求US GAAP持有使用测试，题内缺少所需未折现现金流数据。
The stem omits the framework. The solution applies IAS 36/IFRS. A US GAAP held-for-use recoverability test would require undiscounted cash flows that are not provided.

Q104 资产重估对比率的影响 | 代表题

Ratio effects of an upward revaluation

原题第23页 / Question p. 23 答案第104页 / Solution p. 104 已核对 / Checked

一家制造企业按重估模式计量土地。资料如下，单位为百万欧元：
第 1 年 1 月 1 日购买价格及公允价值：20
第 1 年 12 月 31 日首次重估时公允价值：26
其他条件不变且忽略税项，该次重估导致哪项变化？

An analyst gathers the following information (in € millions) about a manufacturing company's land reported under the revaluation model:

Purchase price and fair value on 1 January Year 1	20
Fair value at initial revaluation on 31 December Year 1	26

All else being equal and ignoring taxes, the revaluation at 31 December Year 1 leads to a:

A 速动比率上升。
higher quick ratio.

B 总资产周转率上升。
higher total asset turnover.

C 债务资产比率下降。
lower debt-to-assets ratio.

答案 / Answer C | 核对 / Review C

首次向上重估使土地及权益增加 6，债务不变。因此债务/资产的分母变大，比率下降。土地不是速动资产，速动比率不变；收入不变而资产变大，总资产周转率反而下降。该重估增值通常通过其他综合收益进入重估盈余，而非当期营业利润。

The initial upward revaluation increases land and equity by 6 while leaving debt unchanged. Debt/assets therefore falls. Land is not a quick asset, so the quick ratio is unchanged. With unchanged revenue and a larger asset base, total asset turnover decreases. The revaluation increase normally enters OCI and revaluation surplus rather than operating profit.

易错点 / Trap 判断比率变化时分别看分子和分母；资产增加不代表经营效率提高。

Track numerator and denominator separately; higher asset values do not imply better operating efficiency.

Q109 并购商誉 | 代表题

Goodwill acquired in a business combination

原题第24页 / Question p. 24 答案第109页 / Solution p. 109 已核对 / Checked

并购所产生的会计商誉应如何处理?

Accounting goodwill arising from acquisitions is:

A 产生时立即计入当期费用。
expensed in the period it arises.

B 资本化并在有限年限内摊销。
capitalized and amortized over a finite period.

C 资本化并每年进行减值测试。
capitalized and tested for impairment annually.

答案 / Answer C | 核对 / Review C

在本题所采用的一般 CFA 财报口径下，并购商誉作为资产确认，不按固定年限摊销，至少每年进行减值测试；出现减值迹象时也要考虑测试。减值损失会减少当期利润及商誉账面价值。

Under the standard reporting treatment tested here, acquired goodwill is capitalized, is not systematically amortized and is tested at least annually for impairment, with additional assessment when impairment indicators arise. An impairment charge reduces both profit and the carrying amount of goodwill.

易错点 / Trap 并购形成的商誉与自行形成的品牌声誉不能混为一谈。

Distinguish purchased goodwill from an internally generated reputation.

同知识点巩固题 / Reinforcement

Q15 研究支出与开发支出资本化

Research expense and development capitalization

原题第3页 / Question p. 3 答案第15页 / Solution p. 15 需补条件 / Assumption required

某公司内部开发无形资产，发生以下支出，单位为百万欧元：研究阶段 900，开发阶段 600。若已满足无形资产确认条件，最多可以资本化多少？

A company incurred the following expenditures (in € millions) to internally develop intangible asset:

Costs incurred during the research phase	900
Costs incurred during the development phase	600

If the recognition criteria for an intangible asset have been met, the maximum amount of capitalized costs (in € millions) is:

A 600。

B 900。

C 1,500。

答案 / Answer A | 核对 / Review A（按所述条件 / under stated assumption）

按答案所采用的 IFRS 口径，研究阶段 900 必须费用化；满足全部确认条件后的开发支出才可以资本化。本题问最大金额，假定 600 全部为满足条件后发生的开发支出，因此最大资本化金额为 600。已经费用化的研究支出不能因项目后来成功而重新资本化。

Under the IFRS treatment assumed by the source answer, research expenditure of 900 is expensed. Development expenditure may be capitalized only after all recognition criteria are met. The maximum is 600, assuming all development spending qualifies from the relevant date. Research costs previously expensed are not reinstated merely because the project later succeeds.

易错点 / Trap 不要把全部研发支出都资本化，也不要把 IFRS 开发规则直接套到一般 US GAAP 研发支出。

Do not capitalize all R&D or automatically apply the IFRS development rule to ordinary US GAAP research and development.

核对说明 / Review note
题干没有明确写 IFRS；原答案显然按 IFRS 处理。这里保留 A，并把所需准则假设写明。
The stem does not name IFRS, but the source solution clearly assumes it. A is retained subject to that accounting-framework assumption.

Q24 购入与内部研发无形资产的现金流

Cash flows for purchased versus internally developed intangibles

原题第5页 / Question p. 5 答案第24页 / Solution p. 24 已核对 / Checked

忽略所得税，与内部开发无形资产相比，购入无形资产最可能带来什么结果？

Ignoring income taxes, acquiring an intangible asset would most likely result in:

A 更低的经营活动净现金流。
a lower net operating cash flow than internally developing the intangible asset.

B 相同的经营活动净现金流。
the same net operating cash flow than internally developing the intangible asset.

C 更高的经营活动净现金流。
a higher net operating cash flow than internally developing the intangible asset.

答案 / Answer C | 核对 / Review C

购入无形资产的现金支出通常列为投资现金流，不减少 CFO；内部研发中的费用化研究支出通常列为经营现金流，会减少 CFO，因此在本题比较下购入方式的 CFO 更高。关键是分类差异，不代表购入方式现金总支出更少。符合资本化条件的开发支出则属于投资现金流，不能把所有内部研发一律列作 CFO。

Cash paid to acquire an intangible is generally an investing outflow and does not reduce CFO. Internally developing the asset normally includes research expenditure expensed through operations, reducing CFO. Thus C is the intended comparison. This is a classification effect, not proof of lower total cash spending. Qualifying capitalized development expenditure is an investing outflow rather than an operating outflow.

易错点 / Trap 资本化提高 CFO 的表现，但现金仍流出，只是列入 CFI。

Capitalization can improve reported CFO while the cash outflow appears in CFI.

核对说明 / Review note
按题库意图比较存在费用化研究阶段支出的内部开发项目。若全部相关内部开发支出均可资本化，CFO 差异未必存在；原解析的概括需要此条件。
The intended comparison assumes internal development includes expensed research costs. If all relevant internal development spending qualifies for capitalization, the CFO difference need not arise.

Q31 资产重估对财务杠杆的影响

Effect of revaluation on financial leverage

原题第7页 / Question p. 7 答案第31页 / Solution p. 31 已核对 / Checked

某公司重估前资料如下，单位为百万欧元：平均总资产 20，平均总负债 8，平均总权益 12。按重估模型对资产进行首次向上重估。忽略所得税，财务杠杆比率最可能如何变化?

An analyst gathers the following information (in € millions) about a company before any revaluations:

Average total assets	20
Average total liabilities	8
Average total equity	12

An initial revaluation increases the carrying value of the asset valued under the revaluation model ignoring taxes, the financial leverage ratio most likely.

A 下降。
decreases.

B 不变。
remains the same.

C 上升。
increases.

答案 / Answer A | 核对 / Review A

财务杠杆=平均总资产/平均总权益，重估前为 20/12。首次向上重估通常增加资产，并经其他综合收益增加重估盈余和权益；负债不变。若资产和权益的平均余额同增 x，则比率变为 (20+x)/(12+x)。因为原比率大于 1，同增相同金额会使比率下降。

Financial leverage equals average assets divided by average equity, initially 20/12. An initial upward revaluation increases assets and, through OCI and revaluation surplus, equity, while liabilities remain unchanged. If the average balances each increase by x, leverage becomes (20+x)/(12+x). Adding the same amount to both sides of a ratio above one lowers the ratio.

易错点 / Trap 分子分母同加一个金额不等于比率不变；同乘相同比例才保持比率。

Adding the same amount to numerator and denominator does not preserve a ratio; multiplying both by the same factor does.

Q49 重估盈余先冲后损

Revaluation surplus and subsequent decreases

原题第11页 / Question p. 11 答案第49页 / Solution p. 49 原文数字问题 / Source discrepancy

一家公司的不可折旧资产采用重估模式。原始成本€25,000；第一次重估后列报价值€27,50；第二次重估后列报价值€22,50（以上两数按原题保留）。第二次重估后的重估盈余是多少？

An analyst gathers the following information about a company's non-depreciable asset reported under the revaluation model

Original cost	€25,000
Reported value after initial revaluation	€27,50
Reported value after second revaluation	€22,50

The revaluation surplus after the second revaluation is:

A -€2,500。

B €0。

C €2,500。

答案 / Answer B | 核对 / Review B

答案文档使用的数值是€27,500和€22,500。按此口径，首次增值2,500计入其他综合收益并累积为重估盈余；第二次下降5,000先冲减这2,500盈余，剩余2,500计入损益。重估盈余余额降至0，不会因为此次下降成为负数，故答案B。

The solution uses €27,500 and €22,500. The first €2,500 increase is recognized in OCI and accumulated in revaluation surplus. The subsequent €5,000 decrease first uses that €2,500 surplus; the remaining €2,500 is a loss in profit or loss. The surplus balance is therefore zero, answer B.

易错点 / Trap 下降先抵消同一资产已有重估盈余，超出部分才进入损益。

A decrease first offsets the existing surplus for the same asset; only the excess goes to profit or loss.

核对说明 / Review note
原题PDF第11页确实印为€27,50及€22,50；答案第49页明确按€27,500及€22,500解题。不能把补零后的数值伪装成原题。
The question on PDF page 11 prints €27,50 and €22,50. Solution page 49 explicitly uses €27,500 and €22,500. The missing zeros are disclosed rather than silently corrected.

Q55 长期资产减值转回上限

Cap on impairment reversals for long-lived assets

原题第12页 / Question p. 12 答案第55页 / Solution p. 55 需补条件 / Assumption required

某不可折旧资产资料（单位：千欧元）：历史成本50；第1年12月31日减值后账面价值40；第2年12月31日可收回金额60。第2年资产负债表允许列报的最高账面金额是多少？

An analyst gathers the following information (in € thousands) about a company's non-depreciable asset.

Historical cost	50
Carrying value after impairment,31 December of Year 1	40
Recoverable amount,31 December of Year 2	60

The maximum allowable carrying amount (in € thousands) on the Year 2 balance sheet is:

A 40。

B 50。

C 60。

答案 / Answer B | 核对 / Review B（按所述条件 / under stated assumption）

按答案的IFRS成本模式，减值转回不得把账面额提高到“假设从未减值时本应有的账面额”以上。本资产不折旧，该上限为历史成本50，所以40最多转回10至50，选B。可收回金额60只是支持转回，不会把成本模式变成重估模式。US GAAP持有使用资产通常不允许转回，届时为40。

Under the solution’s IFRS cost-model assumption, a reversal cannot increase carrying amount above what it would have been without the impairment. Because this asset is non-depreciable, the cap is its 50 historical cost. Reverse 10 from 40 to 50, answer B. The 60 recoverable amount does not authorize an upward revaluation under the cost model. US GAAP held-for-use assets generally remain at 40.

易错点 / Trap 可收回金额高于成本，不等于可以把减值转回超过原账面上限。

A recoverable amount above cost does not remove the ceiling on an impairment reversal.

核对说明 / Review note
题干未指明IFRS、成本模式或资产是否持有使用；答案以IFRS成本模式作答B，US GAAP持有使用情形为A。
The stem omits the framework, measurement model and held-for-use status. The solution assumes the IFRS cost model and selects B; a US GAAP held-for-use asset generally gives A.

Q62 IFRS与US GAAP减值测试

IFRS versus US GAAP impairment testing

原题第14页 / Question p. 14 答案第62页 / Solution p. 62 需补条件 / Assumption required

设备资料：减值前账面价值€20,000；预计未折现未来现金流€22,000；使用价值€17,400；出售时公允价值€19,100；出售成本€1,900。设备账面价值应为多少？

An analyst gathers the following information about a company's equipment:

Carrying value prior to impairment	€20,000
Undiscounted expected future cash flows	€22,000
Value in use	€17,400
Fair value if sold	€19,100
Costs to sell	€1,900

The carrying value of the equipment should be:

A €17,200。

B €17,400。

C €20,000。

答案 / Answer B | 核对 / Review B（按所述条件 / under stated assumption）

按IFRS，可收回金额=max(使用价值17,400，公允价值减出售成本19,100-1,900)=17,400。20,000高于17,400，确认减值2,600，减值后为17,400，选B。US GAAP持有使用资产先比较账面额与未折现现金流：20,000<22,000，通过可收回性测试，因此不减值，选C。

Under IFRS, recoverable amount = max(value in use 17,400, fair value less selling costs 19,100 − 1,900) = 17,400. The impairment is 2,600, leaving 17,400, answer B. Under the US GAAP held-for-use recoverability test, 20,000 is below undiscounted cash flows of 22,000, so no impairment is recognized and C would apply.

易错点 / Trap IFRS用max(净售价,使用价值)；US GAAP持有使用先看未折现现金流。

IFRS compares carrying amount with recoverable amount; US GAAP held-for-use testing first uses undiscounted cash flows.

核对说明 / Review note
题干缺少会计准则；答案页明确按IFRS选B，同时承认US GAAP下是C。
The framework is missing from the stem. The solution explicitly chooses B under IFRS and acknowledges C under US GAAP.

Q68 残值估计变更

Changes in estimated residual value

原题第15页 / Question p. 15 答案第68页 / Solution p. 68 已核对 / Checked

与长期资产预计残值变更有关的会计调整应如何处理?

The adjustments related to changes in the estimated residual value of a long-lived asset should be:

A 采用未来适用法。
handled prospectively.

B 在利润表中单独列示。
shown separately on the income statement.

C 除非不切实可行，否则追溯调整。
handled retrospectively unless impractical to do so.

答案 / Answer A | 核对 / Review A

残值属于会计估计。估计变更影响变更当期及未来期间，不重写以前的折旧，所以选A。采用直线法时，后续年折旧通常按“变更日账面额-新残值”除以剩余使用寿命计算。B不是这种变更的一般列报方法；C混淆了估计变更与通常需要追溯处理的差错或政策变更。

Residual value is an accounting estimate. A revised estimate affects the current and future periods prospectively, without restating past depreciation, so A is correct. Under straight-line depreciation, the remaining depreciable amount is generally current carrying amount minus revised residual value, spread over the remaining life. Do not confuse estimates with prior-period errors or policy changes.

易错点 / Trap 寿命、残值等估计变更向前看；不是发现原报表必然出错。

A change in life or residual-value estimates is prospective; it does not automatically mean prior statements were erroneous.

Q78 减值损失对比率的影响

Ratio effects of an impairment charge

原题第17页 / Question p. 17 答案第78页 / Solution p. 78 已核对 / Checked

忽略所得税，确认一项减值损失会使以下哪项比率下降?

Ignoring income taxes, which of the following ratios decreases as a result of an impairment charge?

A 净利润率。
Net profit margin

B 债务权益比。
Debt-to-equity ratio

C 营运资本周转率。
Working capital turnover

答案 / Answer A | 核对 / Review A

减值损失减少净利润，收入不变，因此净利润率=净利润÷收入下降，选A。减值同时减少权益而不减少债务，所以债务权益比通常上升。按答案所指长期资产减值口径，流动资产与流动负债不变，营运资本周转率不变。

The impairment reduces net income without changing revenue, so net profit margin falls, answer A. Equity falls while debt does not, causing debt-to-equity to rise. For the long-lived-asset impairment contemplated by the solution, working capital is unchanged, so working capital turnover is unaffected.

易错点 / Trap 减值通常压低利润和权益，但不会因此直接减少债务。

Impairment usually reduces earnings and equity without reducing debt.

核对说明 / Review note
营运资本周转率不变的说明以长期非流动资产减值为前提。若减值对象是存货等流动资产，应另行分析。
The working-capital statement assumes impairment of a non-current asset. Impairment of inventory or another current asset requires separate analysis.

Q88 US GAAP固定资产披露

US GAAP PP&E disclosures

原题第19页 / Question p. 19 答案第88页 / Solution p. 88 已核对 / Checked

美国会计准则要求以下哪项与物业、厂房及设备有关的披露？

Which of the following financial statement disclosures concerning PP&E is required under US GAAP?

A 各主要类别可折旧资产的余额。
The balances of major classes of depreciable assets

B 重估模式下的重估日期。
The date of revaluation under the revaluation model

C 期初与期末账面额的调节表。
A reconciliation of carrying amount at the beginning and end of the period

答案 / Answer A | 核对 / Review A

按题库的两套准则披露比较，US GAAP要求披露主要可折旧资产类别余额，故选A。US GAAP一般不允许对PP&E采用IFRS式重估模式，所以B不适用；C所指逐类期初至期末账面额调节是IFRS相对更全面的要求。不要把某公司自愿提供的信息误当成全部公司的一般最低要求。

Under the question bank’s comparison, US GAAP requires balances of major classes of depreciable assets, making A correct. The IFRS-style PP&E revaluation model is generally unavailable under US GAAP, so B does not apply. C refers to the more extensive IFRS reconciliation requirement. Voluntary disclosure by an entity is different from a general minimum requirement.

易错点 / Trap IFRS允许重估，不代表US GAAP也要求重估披露。

IFRS allowing revaluation does not create a US GAAP revaluation-disclosure requirement.

Q89 资产年龄对固定资产周转率的影响

Asset age and fixed asset turnover

原题第19页 / Question p. 19 答案第89页 / Solution p. 89 已核对 / Checked

其他条件相同，相比使用较新资产的公司，使用较旧资产的公司固定资产周转率如何？

All else being equal, a company with older assets has a fixed asset turnover ratio that is:

A 更低。
lower compared to a company with newer assets.

B 相同。
the same compared to a company with newer assets.

C 更高。
higher compared to a company with newer assets.

答案 / Answer C | 核对 / Review C

固定资产周转率=收入÷平均净固定资产。旧资产通常累计折旧更多、账面净额更低；收入相同，则分母较小使周转率更高，选C。因此跨公司比较时，要留意资产年龄、折旧方法与资本投入周期，否则可能误把旧资产的低账面额当作效率优势。

Fixed asset turnover = revenue/average net fixed assets. Older assets generally have more accumulated depreciation and a lower net carrying amount. With equal revenue, the smaller denominator produces higher turnover, answer C. Comparisons should consider asset age, depreciation methods and investment cycles before attributing the difference to operating efficiency.

易错点 / Trap 高周转率可能是旧资产折旧多，不一定是管理更好。

High turnover may reflect heavily depreciated assets rather than superior management.

Q92 使用寿命不确定的无形资产

Indefinite-lived intangible assets

原题第20页 / Question p. 20 答案第92页 / Solution p. 92 已核对 / Checked

一家公司取得一项为期 5 年的产品许可证，并计划在可预见的未来继续销售该产品。许可证可以极低成本续期。该许可证应如何处理？

A company acquires a 5-year license for a product it plans to continue selling for the foreseeable future. The license can be renewed at minimal cost. The license should be:

A	以历史成本列示于资产负债表。 carried on the balance sheet at historical cost.
B	在估计使用寿命内采用直线法摊销。 amortised using the straight-line method over its estimated useful life.
C	在估计使用寿命内采用产量法摊销。 amortised using the units-of-production method over its estimated useful life.

答案 / Answer A | 核对 / Review A

判断经济使用寿命时，要考虑低成本续期能力及持续使用意图，不能只看合同写的 5 年。本题视为使用寿命不确定的无形资产，不进行系统摊销，而至少每年做减值测试。因此选 A；更完整的账面计量是成本扣除已确认的累计减值。

The renewable five-year legal term does not necessarily limit the economic useful life. Minimal renewal cost and an intention to keep selling the product support an indefinite useful life. Such an asset is not amortized and is tested at least annually for impairment. A is the best answer; carrying amount is cost less any recognized impairment.

易错点 / Trap 合同期限不一定等于经济使用寿命；indefinite 不等于永远不会减值。

A legal term is not necessarily the economic life; indefinite life does not mean immunity from impairment.

核对说明 / Review note
A 的“历史成本”应理解为不摊销的成本基础，仍须考虑减值。
Read “historical cost” as the non-amortized cost basis, subject to impairment.

Q112 IFRS 与 US GAAP 减值计算

Impairment under IFRS and US GAAP

原题第24页 / Question p. 24 答案第112页 / Solution p. 112 需补条件 / Assumption required

一家公司采用成本模式计量设备，资料如下，单位为千欧元：
减值前账面价值：2,000
未折现的预计未来现金流：1,800
公允价值：1,700

使用价值：1,500
销售成本：50
减值损失是多少（千欧元）？

An analyst gathers the following information (in € thousands) about a company's equipment reported under the cost model:

Carrying amount before impairment	2,000
Undiscounted expected future cash flows	1,800
Fair value	1,700
Value in use	1,500
Costs to sell	50

The impairment loss (in € thousands) is:

A 300。

B 350。

C 500。

答案 / Answer B | 核对 / Review 题面不能唯一确定 / Not uniquely determined

答案文档按 IFRS 处理：可收回金额 = max(公允价值减销售成本，使用价值) = max(1,700 − 50, 1,500) = 1,650；减值 = 2,000 − 1,650 = 350，因此来源答案为 B。但原题没有指定准则。若按 US GAAP 持有使用的长期资产规则，2,000 > 未折现现金流 1,800，未通过可收回性测试；随后减值 = 2,000 − 公允价值 1,700 = 300，即 A。

The supplied solution assumes IFRS: recoverable amount = max(fair value less selling costs, value in use) = max(1,700 − 50, 1,500) = 1,650, so impairment is 350, choice B. The question itself omits the reporting framework. Under US GAAP for a held-and-used long-lived asset, 2,000 exceeds undiscounted cash flows of 1,800, failing the recoverability test; the loss is then 2,000 − fair value of 1,700 = 300, choice A.

易错点 / Trap IFRS 取公允价值减出售成本与使用价值中的较高者作为可收回金额；US GAAP 先测未折现现金流，再按公允价值计量损失。

IFRS uses the higher recoverable amount; US GAAP first tests undiscounted cash flows, then measures against fair value.

核对说明 / Review note
原题缺少 IFRS/US GAAP 条件，无法唯一确定选项。来源答案 B 仅在其采用的 IFRS 前提下成立；原题页面与答案页面均已视觉核验。
The omitted IFRS/US GAAP condition prevents a unique answer. Source answer B is valid under the solution’ s IFRS assumption; both source pages were visually checked.

Q113 报废资产的终止确认

Derecognition of an abandoned asset

原题第25页 / Question p. 25 答案第113页 / Solution p. 113 已核对 / Checked

一项采用成本模式计量的物业、厂房及设备（PP&E）被放弃使用，资料如下：
账面价值：£10 million
放弃时的公允价值：£1 million
假设没有减值，该资产的放弃会导致财务报表出现什么变化?

An analyst gathers the following information about PP&E that is abandoned and accounted for using the cost model:

Carrying value	£ 10 million
Fair value at time of abandonment	£ 1 million

Assuming no impairment, the abandonment of PP&E on the financial statements will result in a:

A PP&E 减少 £10 million。
decrease of £ 10 million in PP&E.

B 利润表确认 £1 million 损失。
loss of £ 1 million on the income statement.

C 现金流量表减少 £1 million。
decrease of £ 1 million on the cash flow statement.

答案 / Answer A | 核对 / Review A

放弃资产且没有处置收入时，应把整项账面价值 10 百万英镑转销，确认同额损失。资产减少 10，利润减少 10，但没有因此产生现金流。题目给出的公允价值 1 不代表收到了 1 的现金；又明确假设不先减值，因此按现有账面价值终止确认。

Abandonment without proceeds derecognizes the entire £10 million carrying amount and recognizes an equal loss. Assets and profit fall by 10, but the abandonment itself generates no cash flow. The £1 million fair value is not cash proceeds, and the question assumes no prior impairment.

易错点 / Trap 没有收到现金的报废，不能把公允价值当作出售收入。

For an abandonment with no proceeds, fair value is not a cash receipt.

Q115 成本模式下 PP&E 披露

PP&E disclosures under the cost model

原题第25页 / Question p. 25 答案第115页 / Solution p. 115 已核对 / Checked

对于采用成本模式计量的每一类物业、厂房及设备（PP&E），以下哪项披露是必需的?

Which of the following disclosures is required for each class of PP&E carried under the cost model?

A 剩余使用年限。
Remaining useful life

B 账面原值。
Gross carrying amount

C 公允价值以及其取得方式的详情。
Fair value and details of how it was obtained

答案 / Answer B | 核对 / Review B

按答案文档使用的披露框架，需披露每类 PP&E 的计量基础、折旧方法、使用年限或折旧率，以及账面原值和累计折旧等。B 的 gross carrying amount 指扣除累计折旧及减值前的原值。A 把所用使用年限与剩余年限混淆；C 属于重估模式下相关披露的思路。

Under the disclosure framework used in the solution, each PP&E class requires information including the measurement basis, depreciation method, useful lives or rates, gross carrying amount and accumulated depreciation. Gross carrying amount is before accumulated depreciation and impairment. A substitutes remaining life for the useful lives used; C relates to revaluation disclosures.

易错点 / Trap gross carrying amount 是未扣累计折旧的原值，不是净账面价值。

Gross carrying amount is before accumulated depreciation, not net book value.

Q128 无形资产成本与重估模式

Cost and revaluation models for intangibles

原题第28页 / Question p. 28 答案第128页 / Solution p. 128 已核对 / Checked

一项版权存在活跃市场，具有确定的有限寿命，并在公司经营中使用超过一个会计期间。在 US GAAP 下，应采用哪种模式列报该版权？

A copyright, for which an active market exists, has a set finite life and is used in a company's operations over more than one fiscal period. Under U.S. GAAP, this copyright is reported using:

A 仅成本模式。
only the cost model.

B 仅重估模式。
only the revaluation model.

C 成本模式或重估模式均可。
either the cost or the revaluation model.

答案 / Answer A | 核对 / Review A

US GAAP 对这类无形资产采用成本模式，即成本减累计摊销及累计减值。存在活跃市场也不能让 US GAAP 改用重估模式。活跃市场是 IFRS 允许某些无形资产选择重估模式的重要条件，本题给出它是为了考查准则区分。

US GAAP uses the cost model for this intangible: cost less accumulated amortization and impairment. An active market does not permit revaluation under US GAAP. The active-market condition is relevant to an IFRS revaluation option, which must not be imported into this question.

易错点 / Trap 看到 active market 仍要先看准则；US GAAP 的答案不会因此变为重估模式。

An active market does not override the reporting framework; US GAAP still uses cost.

07 租赁 养老金与金融资产

Leases, pensions and financial assets

先分清承租人和出租人，再看费用列报 现金流与资产负债表影响。

Identify lessee versus lessor, then assess expense, cash-flow and balance-sheet effects.

本章 7 题；代表题 Q46、Q60、Q119

先学知识点 / Learn the rules first

1 经营租赁通常也上资产负债表

Operating leases generally appear on the balance sheet

现代租赁准则下，承租人的大多数租赁均确认使用权资产和租赁负债，不能再笼统说经营租赁是表外融资。租赁可能需要较少首付款，也可能降低技术过时风险，但是否便宜或风险转移多少取决于合同。

Under modern lease standards, lessees generally recognize right-of-use assets and lease liabilities for most leases. Operating leases are not universally off-balance-sheet financing. Leasing can reduce initial cash outlay and exposure to obsolescence, depending on contract terms.

对应原题 / Related questions: Q100, Q129

2 US GAAP经营租赁与融资租赁的费用呈现不同

US GAAP operating and finance leases have different expense presentation

US GAAP经营租赁通常列单一租赁费用；融资租赁分列使用权资产摊销与利息费用。经营租赁支付通常列CFO；融资租赁的还本列CFF、利息通常列CFO。因此第46题的经营租赁并不意味着融资现金流出更高；其单独报告的折旧或摊销费用较低，答案选B。

US GAAP operating leases generally present one lease expense, while finance leases present right-of-use asset amortization and interest separately. Operating lease payments generally enter CFO; finance lease principal enters CFF and interest generally CFO. Q46 therefore points to lower separately reported depreciation/amortization for the operating lease, not larger financing outflows.

对应原题 / Related questions: Q46

3 短期豁免是可选择 不是所有租赁都不确认负债

Short-term treatment is an election, not a general exemption

符合短期租赁定义的租约通常可选择按租赁期直线确认租赁费用，而不确认使用权资产和负债。题库强调12个月或以下；实际应用还需考虑购买选择权等准则条件。若需计量租赁负债，核心是租赁付款的现值，而不是未折现总额。

An eligible short-term lease may be expensed over the lease term without recognition of a right-of-use asset and liability. The bank emphasizes terms of 12 months or less; actual eligibility also depends on criteria such as purchase options. When a lease liability is recognized, it is based on present value rather than undiscounted total payments.

对应原题 / Related questions: Q60

4 出租人融资租赁转向租赁应收款

A finance lessor recognizes a net investment or receivable

出租人的融资租赁通常终止确认所出租资产并确认租赁应收款或净投资；经营租赁通常保留标的资产，继续计提折旧并确认租金收益。不要把承租人的使用权资产处理套到出租人身上。

A finance lessor generally derecognizes the underlying asset and recognizes a lease receivable or net investment. An operating lessor generally retains the asset, depreciates it and recognizes rental income. Do not apply the lessee's right-of-use accounting to the lessor.

对应原题 / Related questions: Q77

5 确定给付养老金的重新计量与当期服务成本分开

Separate pension remeasurements from service cost

按第116题使用的IFRS口径，服务成本和净利息进入损益，精算利得损失等重新计量进入OCI。题目问OCI时，不要选雇员服务成本。OCI是其他综合收益，并不等于经营现金流。

Under the IFRS treatment used in Q116, service cost and net interest are recognized in profit or loss, while remeasurements such as actuarial gains and losses enter OCI. OCI means other comprehensive income; it is not operating cash flow.

对应原题 / Related questions: Q116

6 少量普通股票投资不能用摊余成本

A small equity investment is generally not measured at amortized cost

第119题明确US GAAP且持股不足1%、没有其他权益。按题目的通常假设，该权益证券以公允价值计量，未实现利得损失进入当期损益。不能把债券的摊余成本规则或IFRS某些权益工具的FVOCI选择直接搬过来。

Q119 specifies US GAAP, an ownership interest below 1% and no other holding. Under the question's usual assumptions, the equity security is measured at fair value with changes in profit or loss. Do not import debt-security amortized-cost rules or IFRS's election for certain equity instruments into this question.

对应原题 / Related questions: Q119

做题前自检 / Before you answer

关键词顺序：准则 → lessee或lessor → 经营或融资租赁 → 费用项目及现金流分类。

Read in this order: framework, lessee or lessor, operating or finance classification, then expense and cash-flow treatment.

再用原题举例 / Core original examples

Q46 承租人的经营租赁与融资租赁 | 代表题

Operating versus finance leases for lessees

原题第10页 / Question p. 10 答案第46页 / Solution p. 46 已核对 / Checked

根据美国会计准则，在一项多年期租赁的第二年，相对于将同一租赁归类为融资租赁，经营租赁承租人最可能报告什么?

Under US GAAP, in the second year of a multi-year lease, a lessee with an operating lease most likely reports a:

A 更高的利息费用。
higher interest expense than it would if the lease were a finance lease.

B 更低的折旧费用。
lower depreciation expense than it would if the lease were a finance lease.

C 更大的融资活动现金流出。
greater financing cash outflow than it would if the lease were a finance lease.

答案 / Answer B | 核对 / Review B

US GAAP经营租赁通常把使用权资产耗用与租赁负债利息合并列为单一租赁费用，不另列折旧费用；融资租赁则分别确认使用权资产折旧和利息，因此B正确。经营租赁付款列入CFO，融资租赁本金列入CFF、利息列入CFO，所以C方向相反。

A US GAAP operating lease produces a single lease expense rather than separately presented depreciation and interest. A finance lease separately reports ROU-asset depreciation and interest, making B the best answer. Operating-lease payments are operating cash outflows; finance-lease principal is a financing outflow and interest an operating outflow.

易错点 / Trap 经营租赁不单列折旧，不代表没有使用权资产或租赁负债。

No separate depreciation expense does not mean that the operating lease is off the balance sheet.

Q60 短期租赁确认豁免 | 代表题

Short-term lease recognition exemption

原题第13页 / Question p. 13 答案第60页 / Solution p. 60 已核对 / Checked

对于租期为12个月或以下的租赁，承租人可以或必须怎样处理?

For leases with a term of twelve months or less, the lessee:

A 可以按直线法确认租赁付款费用。
may recognize lease payments on a straight-line basis.

B 必须在租赁开始时确认使用权资产及租赁负债，两者均等于未来租赁付款现值。
must report at lease inception a "right-of-use" asset and a lease liability, which are both equal to the present value of future lease payments.

C 必须在租赁开始时确认使用权资产及租赁负债，两者均等于未折现的未来租赁付款。
must report at lease inception a right-of-use" asset and a lease liability, which are both equal to the undiscounted value of future lease payments.

答案 / Answer A | 核对 / Review A

符合短期租赁豁免条件时，承租人可选择将租赁付款通常按直线法费用化，无须按一般租赁模式确认使用权资产和租赁负债，选A。这里是可选择的豁免，不是所有短租都必须费用化。B忽略豁免；C又错误使用未折现金额。

For a qualifying short-term lease, the lessee can elect a recognition exemption and generally expense lease payments on a straight-line basis, answer A. This is an election, not a requirement that every short lease be expensed. B ignores the exemption, while C also uses undiscounted amounts.

易错点 / Trap “may”表示选择权；同时留意购买选择权等资格条件。

“May” signals an election; purchase-option and other qualifying conditions still matter.

核对说明 / Review note
12个月是简化识别线索，不能省略准则对短期租赁定义的其他条件。答案页对低价值资产的金额描述不作为本讲义的固定法定门槛。

Twelve months is a useful cue, but the other conditions in the definition still matter. The source’s low-value dollar figure is not treated here as a universal statutory threshold.

Q119 小比例股权投资的计量 | 代表题

Measurement of a small equity investment

原题第26页 / Question p. 26 答案第119页 / Solution p. 119 已核对 / Checked

一家按 US GAAP 报告的公司购买另一家公司发行的权益证券。该证券占发行人流通权益不足 1%，且购买方没有持有该发行人的其他股权。该投资最可能按什么方式列示于购买方的资产负债表?

A company reporting under US GAAP purchases an equity security issued by another company. If the equity security represents less than 1% of the outstanding equity of the issuing company and the acquiring company owns no other equity stake in the issuing company, the investment is most likely carried on the acquiring company's balance sheet at

A 摊余成本。
amortized cost.

B 公允价值，未实现持有利得或损失计入利润表。
fair value with any unrealized holding gains/losses recognized in the income statement.

C 公允价值，未实现持有利得或损失计入其他综合收益。
fair value with any unrealized holding gains/losses recognized in other comprehensive income.

答案 / Answer B | 核对 / Review B

本题是没有重大影响的小比例股权投资，US GAAP 一般按公允价值计量，公允价值变动计入当期损益。摊余成本主要不是这种权益证券的计量方式；不要把 IFRS 对某些权益投资可作 OCI 选择的规则搬到本题。

This small equity position does not indicate significant influence. Under the general US GAAP treatment tested here, the investment is measured at fair value and unrealized gains or losses enter earnings. Amortized cost is not the relevant equity-security model. Do not import the IFRS OCI election for certain equity investments into this question.

易错点 / Trap 权益证券的小比例持仓：US GAAP 通常 FV through earnings。

For the small equity holding tested here, US GAAP generally uses fair value through earnings.

同知识点巩固题 / Reinforcement

Q77 出租人的融资租赁

Finance leases from the lessor’ s perspective

原题第17页 / Question p. 17 答案第77页 / Solution p. 77 已核对 / Checked

在以下哪类租赁中，出租人在租赁开始时终止确认出租资产，并在资产负债表确认应收租赁款?

Under which of the following classifications of leases will a lessor derecognize the leased asset and recognize a lease receivable on the balance sheet at lease inception?

A 仅IFRS下的融资租赁。
Only a finance lease under IFRS

B 仅US GAAP下的经营租赁。
Only an operating lease under US GAAP

C IFRS融资租赁和US GAAP经营租赁两者。
Both a finance lease under IFRS and an operating lease under US GAAP

答案 / Answer A | 核对 / Review A

在所列两类中，IFRS融资租赁下出租人用应收租赁款/租赁净投资替代出租资产，故选A。US GAAP经营租赁出租人保留出租资产，并确认租金收入和相应折旧，不作同样的资产替换。注意题目主语是出租人，而不是承租人。

Among the two classifications listed, an IFRS finance lessor replaces the underlying asset with a lease receivable or net investment, so A is correct. A US GAAP operating lessor retains the asset and recognizes rental income and depreciation. This question concerns the lessor, not the lessee.

易错点 / Trap “Only”仅比较题目给出的两种类别，不表示US GAAP所有租赁都不能终止确认资产。

“Only” distinguishes the two listed cases; it does not rule out derecognition for other US GAAP lessor classifications.

Q100 租赁的融资动机

Why firms lease assets

原题第22页 / Question p. 22 答案第100页 / Solution p. 100 已核对 / Checked

以下哪一项可能促使承租人租赁高价值、长期资产，而不是购买？租赁合同通常具有哪项特点?

Which of the following could motivate a lessee to lease a high-value, long-lived asset rather than to purchase it? Lease contracts:

A 通常只要求很少首付款，甚至不要求首付款。
usually require little, if any, down payment.

B 作为表外融资结构列报。
are reported as off-balance sheet financing structures.

C 不要求在资产负债表确认负债。
do not require the recognition of a liability on the balance sheet.

答案 / Answer A | 核对 / Review A

租赁通常降低初期现金投入，因此 A 是合理动机。对于题目中的高价值、长期租赁，不能把不入表当作普遍优势：承租人通常须确认使用权资产与租赁负债。短期等特定豁免不是本题设定。

Leasing commonly requires little or no down payment, reducing the initial cash commitment. High-value, long-term leases generally require the lessee to recognize a right-of-use asset and lease liability. Off-balance-sheet treatment is therefore not a general motivation for the lease described.

易错点 / Trap 新租赁会计下，“经营租赁一律不入表”是过时口诀。

Do not assume all operating leases remain off the balance sheet.

Q116 设定受益养老金的 OCI

OCI for defined-benefit pensions

原题第25页 / Question p. 25 答案第116页 / Solution p. 116 已核对 / Checked

设定受益养老金计划的净养老金资产或负债变动中，以下哪个组成部分计入其他综合收益（OCI）？

Which of the following components of change in the net pension asset or liability of a defined-benefit pension plan is recognized in other comprehensive income?

A 雇员服务成本。
Employees 'service costs

B 精算利得和损失。
Actuarial gains and losses

C 按期初净养老金资产或负债计提的净利息费用或收益。
Net interest expense or income accrued on the beginning net pension asset or liability

答案 / Answer B | 核对 / Review B

答案采用 IFRS 养老金框架：服务成本与净利息计入当期损益；重新计量部分，包括精算利得和损失，计入 OCI。该 IFRS 重新计量部分之后不通过摊销转回损益。因此选 B。

The solution uses IFRS: service cost and net interest are recognized in profit or loss, while remeasurements, including actuarial gains and losses, are recognized in OCI. These IFRS remeasurements are not subsequently amortized into profit or loss. Therefore B is correct.

易错点 / Trap IFRS下，记住两项进损益：service cost、net interest；精算重新计量进 OCI。

Under IFRS, service cost and net interest go to profit or loss; actuarial remeasurements go to OCI.

核对说明 / Review note
原题未写准则；答案解释明确采用 IFRS，本讲义据此讲解。
The question omits the framework; its solution explicitly uses IFRS, which is the basis of this explanation.

Q129 租赁与资产过时风险

Leasing and obsolescence risk

原题第29页 / Question p. 29 答案第129页 / Solution p. 129 已核对 / Checked

与借债购买资产相比，租赁资产最可能带来哪项结果？

Compared to purchasing an asset using debt, leasing an asset is most likely to:

A 融资成本更高。
have a higher financing cost.

B 首付款更大。
require a greater down payment.

C 降低承租人承担的资产过时风险。
reduce lessee's exposure to obsolescence.

答案 / Answer C | 核对 / Review C

租赁可通过合同期限、续租及归还安排减少承租人长期持有过时资产的风险，因此 C 最符合一般动机。租赁通常不要求更大的首付款。融资成本要看合同及融资条件，不能概括为租赁一定更高；实际过时风险转移程度也取决于合同。

Leasing can reduce exposure to technological or economic obsolescence through its term, return and renewal arrangements. It usually does not require a larger down payment. Relative financing cost depends on contract and credit terms; it is not generally higher simply because the asset is leased. The precise risk transfer also depends on the lease terms.

易错点 / Trap 租赁优势看现金投入及风险分担，别把任何合同都当成完全转移风险。

Evaluate upfront cash and contractual risk sharing; a lease does not automatically transfer every ownership risk.

08 所得税与递延所得税

Income taxes and deferred taxes

把利润表税费与当前应交税分开，判断未来是少交税还是补交税。

Separate tax expense from current tax payable and identify whether timing differences create future tax savings or future payments.

本章 6 题；代表题 Q81、Q86

先学知识点 / Learn the rules first

1 DTA是未来可利用的税收利益 DTL是未来补税义务

DTA represents future tax benefits; DTL represents future tax payments

在可转回的暂时性差异背景下，当前税务扣除比会计费用少，可能使现在多交税、以后少交税，形成DTA；当前税务扣除比会计费用多，可能使现在少交税、以后补交税，形成DTL。永久性差异不产生递延税。不能只凭应税利润大于会计利润就无条件判DTA，还要确认差异会转回。

For reversing temporary differences, fewer tax deductions now can create future tax benefits and a DTA; more deductions now can defer tax payments and create a DTL. Permanent differences do not create deferred tax. Taxable income exceeding accounting income alone is insufficient unless the difference is temporary.

对应原题 / Related questions: Q37, Q45, Q81

2 资产账面额与计税基础的方向

Compare an asset's carrying amount with its tax base

对题库中的一般资产暂时性差异：账面额高于计税基础，未来收回账面额时可扣税成本较少，通常产生DTL；账面额低于计税基础，未来可扣除金额较多，通常产生DTA。负债差异的方向要另看，不能把资产口诀原样套过去。

For the standard asset temporary differences in this bank, carrying amount above tax base generally creates a DTL because fewer tax deductions remain on recovery. Carrying amount below tax base generally creates a DTA. Liability differences require their own analysis rather than copying the asset rule.

Asset carrying amount > Tax base: usually DTL
Asset carrying amount < Tax base: usually DTA

对应原题 / Related questions: Q37, Q45, Q86

3 利润表所得税费用包含递延税变动

Tax expense includes deferred tax movements

在递延税变动均计入当期损益、没有其他调整的简化情况下，所得税费用等于当前所得税加DTL增加减DTA增加。税费是利润表概念，应交税是当前税款概念，现金实付税又可能受应交税余额变动影响，三者不要混为一谈。

In the simplified case where deferred tax changes flow through current profit or loss, tax expense equals current tax plus the increase in DTL less the increase in DTA. Tax expense, current tax payable and cash tax paid are different measures; payable balances can further separate current tax from cash paid.

Income tax expense = Current tax + Change in DTL - Change in DTA

对应原题 / Related questions: Q37, Q45

4 DTA必须有足够未来应税利润支持

Recognizing a DTA requires sufficient future taxable profit

如果未来抵扣利益不再满足确认条件，IFRS通常减少DTA账面额；US GAAP通常通过估值备抵抵减DTA。估值备抵变动通常在计入当期损益时影响所得税费用及有效税率，却不会改变法律规定的法定税率。第64题省略准则，所附答案A采用IFRS；US GAAP口径对应B。

If future deductions are no longer sufficiently recoverable, IFRS generally reduces the DTA's carrying amount, whereas US GAAP generally uses a valuation allowance. Changes in the allowance normally affect tax expense and the effective rate when recognized in profit or loss, not the legally prescribed statutory rate. Q64 omits the framework: its supplied A follows IFRS, while B fits US GAAP.

对应原题 / Related questions: Q64, Q127

做题前自检 / Before you answer

先问差异是否暂时，再问未来是否可用，最后问适用准则；把未来少交税读成资产，把未来补税读成负债。

Ask whether the difference reverses, whether future benefits can be used and which framework applies. Future tax savings suggest an asset; future payments suggest a liability.

再用原题举例 / Core original examples

Q81 研发费用形成DTA | 代表题

Research expenses creating a DTA

原题第18页 / Question p. 18 答案第81页 / Solution p. 81 已核对 / Checked

公司发生的研究费用在本期财务报告中全部费用化，但适用税法要求在5年内扣除。假设未来会有足够应税利润利用相关可抵扣暂时性差异，公司本期最可能确认什么？

A company incurred research costs which were all expensed in the current fiscal year for financial reporting purposes. Applicable tax laws require research costs to be expensed over a 5-year period. If taxable profit will be available against which the deductible temporary differences can be utilized, in the current fiscal year the company will most likely record:

A	递延所得税资产。 a deferred tax asset.
B	递延所得税负债。 a deferred tax liability.
C	两者都不确认。 neither a deferred tax asset nor a deferred tax liability.

答案 / Answer A | 核对 / Review A

会计上已全额扣除，资产账面额为0；税务上尚未扣除的部分仍可在未来抵税，形成正的税基。资产账面额低于税基，且未来应税利润足够，产生DTA，选A。直觉是税务扣除较晚，现在相对多交税，未来获得抵税利益；这不是永远不准扣除的永久性差异。

The book carrying amount is zero because the cost is fully expensed, while the tax base reflects future deductions still available. Carrying amount below tax base creates a deductible temporary difference. Because sufficient taxable profit is expected, recognize a DTA, answer A. Tax deductions are delayed, not permanently disallowed.

易错点 / Trap 先会计费用化、后税务扣除：未来还有税收利益，通常是DTA。

Book expense before tax deduction generally creates a future tax benefit and a DTA.

Q86 资产账面额高于税基 | 代表题

Asset carrying amount above tax base

原题第19页 / Question p. 19 答案第86页 / Solution p. 86 已核对 / Checked

一项资产的账面金额高于其税基，可能属于哪种差异?

The carrying amount of an asset being higher than its tax base may be considered a:

A 导致递延所得税资产的暂时性差异。
temporary difference resulting in a deferred tax asset.

B 导致递延所得税资产的永久性差异。
permanent difference resulting in a deferred tax asset.

C 导致递延所得税负债的暂时性差异。
temporary difference resulting in a deferred tax liability

答案 / Answer C | 核对 / Review C

在一般可逆暂时性差异且无确认例外的情形下，资产账面额高于税基表示未来收回账面额时，税务可扣除的金额较少，会产生应税金额，所以确认DTL，选C。永久性差异不会通过以后转回形成递延税。此判断针对资产，不能不加区分套到负债。

For a reversible temporary difference without a recognition exception, an asset carrying amount above its tax base means fewer tax deductions remain when the book value is recovered. That creates future taxable amounts and a DTL, answer C. Permanent differences do not reverse into deferred taxes. The sign rule is specifically for assets.

易错点 / Trap 资产：账面额>税基通常DTL；账面额<税基通常DTA。

For assets, carrying amount above tax base generally creates a DTL; below tax base generally creates a DTA.

同知识点巩固题 / Reinforcement

Q37 递延所得税负债的形成

Creation of a deferred tax liability

原题第8页 / Question p. 8 答案第37页 / Solution p. 37 已核对 / Checked

下列哪种情况可能产生递延所得税负债?

A deferred tax liability could arise when:

A 资产的计税基础大于账面价值。
the tax base of an asset is greater than its carrying amount.

B 负债的账面价值大于计税基础。
the carrying amount of a liability is greater than its tax base.

C 财务会计确认的所得税费用超过应付所得税。
financial accounting income tax expense exceeds income taxes payable.

答案 / Answer C | 核对 / Review C

当暂时性差异使当期会计税费高于当期应付所得税时，少付的税可能要在未来补缴，从而形成 DTL。对资产而言，账面价值大于计税基础通常形成 DTL；反方向通常形成 DTA。对负债，账面价值大于计税基础通常属于可抵扣暂时性差异。

A temporary difference can make accounting tax expense exceed current taxes payable, with the deferred amount becoming payable in a later period; this can create a DTL. For assets, carrying amount above tax base generally gives a DTL, while the opposite gives a DTA. A liability carrying amount above tax base generally represents a deductible temporary difference.

易错点 / Trap 资产和负债的税基比较方向不同；先识别科目性质。

The carrying-amount/tax-base relationship works differently for assets and liabilities.

核对说明 / Review note
这里是“可能产生”，不应把税费大于应付税一律解释为新增 DTL；DTA 转回等也可能影响该差额。
The wording is “could arise.” Tax expense above current taxes payable is not uniquely evidence of a new DTL; DTA reversals and other changes can also affect the difference.

Q45 递延所得税资产的形成

Creation of a deferred tax asset

原题第10页 / Question p. 10 答案第45页 / Solution p. 45 已核对 / Checked

下列哪种情况可能产生递延所得税资产?

Deferred tax assets could arise when:

A 应税利润超过会计利润。
Taxable income exceeds accounting profit.

B 资产的账面价值超过计税基础。
the carrying amount of assets exceeds their tax base.

C 会计所得税费用超过应付所得税。
Accounting income tax expense exceeds income taxes payable.

答案 / Answer A | 核对 / Review A

如果应税利润暂时高于会计利润，公司当期税负较高，而差异预计可在以后税前扣除，就可能形成 DTA，故选 A。资产账面价值高于税基通常形成应纳税暂时性差异，指向 DTL。关键是未来可抵扣的暂时性差异；永久性差异本身不形成递延税。

If taxable income temporarily exceeds accounting profit, current tax can be higher and the difference may be deductible in a later period, creating a DTA. An asset carrying amount above tax base generally indicates a taxable temporary difference and a DTL. The key is a recoverable temporary difference; permanent differences do not create deferred tax.

易错点 / Trap 现在多交税不一定产生 DTA；必须有未来可抵扣或可利用的税务利益。

Higher current tax does not automatically create a DTA; there must be a future deductible or usable tax benefit.

Q64 递延所得税资产的可回收性

Recoverability of deferred tax assets

原题第14页 / Question p. 14 答案第64页 / Solution p. 64 需补条件 / Assumption required

公司以前已经确认一项递延所得税资产。在当前资产负债表日，其经济利益确认条件不再满足，但税务差异仍预计为暂时性差异。公司应怎样处理?

A deferred tax asset has been previously recognized. At the current balance sheet date, the criteria for economic benefits are not met but the tax differences are still expected to be temporary. As a result:

A 冲减或转销现有递延所得税资产。
the existing deferred tax asset should be reversed.

B 设立估值备抵账户。
a valuation allowance account should be established.

C 把现有递延所得税资产重分类为权益。
the existing deferred tax asset should be reclassified as equity.

答案 / Answer A | 核对 / Review A（按所述条件 / under stated assumption）

按答案的IFRS口径，不能再由足够未来应税利润支持的DTA应直接减记；若全部不再满足确认条件则转销，选A。US GAAP通常通过valuation allowance抵减DTA，届时选B。差异仍属暂时性，不代表相关税收利益一定能实现；不能把DTA改列权益。

Under the solution’s IFRS assumption, a DTA unsupported by sufficient probable future taxable profit is directly reduced; if none remains recoverable, it is written off, answer A. US GAAP instead generally uses a valuation allowance, answer B. A temporary difference can exist even when its tax benefit is not recoverable. Reclassifying the DTA as equity is inappropriate.

易错点 / Trap 先判断DTA是否可用，再区分IFRS直接减记和US GAAP估值备抵。

Separate recoverability from the presentation difference: direct reduction under IFRS versus a valuation allowance under US GAAP.

核对说明 / Review note
题干未指定准则；所附答案以IFRS选A，US GAAP会选B。源解释泛指DTA及DTL的措辞不严谨，本讲解仅讨论题目中的DTA。
The stem omits the framework: IFRS gives A and US GAAP B. The source loosely extends the economic-benefit discussion to DTLs; this explanation is limited to the DTA actually asked about.

Q127 递延所得税资产估值备抵

Valuation allowance for deferred tax assets

原题第28页 / Question p. 28 答案第127页 / Solution p. 127 已核对 / Checked

在 US GAAP 下，确认递延所得税资产的估值备抵会影响哪项税率？

Under US GAAP, the recognition of a valuation allowance for deferred tax assets impacts

A 仅实际有效税率。
the effective tax rate only.

B 仅法定税率。
the statutory tax rate only.

C 实际有效税率与法定税率均受影响。
both the effective tax rate and statutory tax rate.

答案 / Answer A | 核对 / Review A

确认估值备抵会减少递延所得税资产，通常增加当期所得税费用。因此在税前利润为正等常规题设下，所得税费用/税前利润所定义的有效税率上升。法定税率由税法规定，不会因为公司确认一项会计备抵而改变。

Recognizing a valuation allowance reduces a deferred tax asset and generally increases income tax expense. With positive pretax income in the usual question setting, the effective rate, income tax expense/pretax profit, rises. The statutory rate is set by tax law and is not changed by an accounting allowance.

易错点 / Trap 估值备抵改变的是税费的会计确认，不是税法规定的税率。

A valuation allowance changes accounting tax expense, not the legislated tax rate.

09 财务比率 共同比分析与杜邦分解

Ratios, common-size analysis and DuPont decomposition

先认清分子分母的含义，再用比率判断效率 流动性 偿债能力与盈利能力。

Understand numerator and denominator before using ratios to assess activity, liquidity, solvency and profitability.

本章 25 题；代表题 Q28、Q74、Q96、Q114、Q124

先学知识点 / Learn the rules first

1 共同比报表先确定统一分母

Common-size statements need a consistent denominator

利润表通常以收入为100%；资产负债表通常以总资产为100%。收入等于销货成本加毛利。两家公司研发金额相同，不代表占收入比例相同。第21题30的销售管理费用要除以250的收入，不是除以150成本或100毛利。

An income statement usually uses revenue as 100%; a balance sheet usually uses total assets. Revenue equals COGS plus gross profit. Equal R&D spending does not imply equal R&D intensity. In Q21, SG&A of 30 is divided by revenue of 250, not COGS of 150 or gross profit of 100.

对应原题 / Related questions: Q21, Q36, Q122

2 周转次数越高 对应天数通常越低

Higher turnover generally means fewer days

应收周转率用收入除平均应收；存货周转率用销货成本除平均存货；应付周转率优先用采购额除平均应付。没有采购额资料且题目要求近似时，才以销货成本代替。信用和收款效率改善通常表现为应收周转率上升、DSO下降。

Receivables turnover uses revenue divided by average receivables; inventory turnover uses COGS divided by average inventory. Payables turnover preferably uses purchases divided by average payables, with COGS as a proxy when the question provides no purchases. Better collection usually raises receivables turnover and lowers DSO.

DSO = Days per year / Receivables turnover
DIO = Days per year / Inventory turnover
DPO = Days per year / Payables turnover

对应原题 / Related questions: Q16, Q18, Q20, Q123

3 现金转换周期衡量资金被占用多久

The cash conversion cycle measures funding tied up in operations

先持有存货、后等待收款，使资金占用增加；延后支付供应商，使占用减少，因此CCC等于DIO加DSO减DPO。应付周转率下降意味着DPO上升，通常缩短CCC。题目指定360天必须用360；未指定时可用365，方向比较仍须保持一致。

Inventory holding and customer collection tie up funds; supplier credit offsets that investment. CCC equals DIO plus DSO minus DPO. Lower payables turnover means longer DPO and a shorter CCC. Use a 360-day year when specified; otherwise use a consistent day-count convention.

CCC = DIO + DSO - DPO

对应原题 / Related questions: Q28, Q82, Q124

4 速动比率排除存货 防御区间用天数表达

Quick ratio excludes inventory; defensive interval is measured in days

速动资产通常包括现金 短期可交易证券和应收账款，不包括存货和预付款；分母是流动负债。防御区间衡量在没有新现金流入时，现有流动性资产能支持多少天经营现金支出。它与CCC不是同一概念。

Quick assets generally include cash, short-term marketable securities and receivables, excluding inventory and prepayments. Divide by current liabilities. The defensive interval measures days of operating cash expenditure covered by existing liquid assets without new inflows; it is not the CCC.

Quick ratio = (Cash + Short-term marketable securities + Receivables) / Current liabilities
Defensive interval = Liquid assets / Daily cash operating expenditure

对应原题 / Related questions: Q95, Q96, Q108

5 债务 负债 资本和权益不可互换

Debt, liabilities, capital and equity are not interchangeable

本题库debt通常指有息债务，不等于全部liabilities。Debt-to-capital的分母是债务加权益；Debt-to-equity的分母只有权益。杜邦里的financial leverage是平均资产除平均权益，也不是债务权益比。先写完整分子分母再代数值。

In this bank, debt generally means interest-bearing debt, not all liabilities. Debt-to-capital divides by debt plus equity; debt-to-equity divides by equity alone. DuPont financial leverage is average assets divided by average equity, a different ratio.

Debt/assets = Interest-bearing debt / Total assets
Debt/capital = Debt / (Debt + Equity)
Debt/equity = Debt / Equity
Financial leverage = Average assets / Average equity

对应原题 / Related questions: Q79, Q87, Q97, Q107

6 偿债比率要同时看负债规模与覆盖能力

Assess both debt levels and debt-service coverage

利息保障倍数等于EBIT除利息。固定费用保障倍数在本题口径中为EBIT加租赁付款，再除以利息加租赁付款。公司可能利息保障变好但杠杆变差，不能看到一个指标改善就说整体偿债能力全面改善。第90题正是这种情况。

Interest coverage is EBIT divided by interest. The bank's fixed-charge coverage adds lease payments to EBIT and divides by interest plus lease payments. Coverage can improve while leverage worsens; one improving metric does not establish an across-the-board improvement in solvency.

Interest coverage = EBIT / Interest expense
Fixed-charge coverage = (EBIT + Lease payments) / (Interest + Lease payments)

对应原题 / Related questions: Q76, Q85, Q90, Q126

7 ROA和ROE使用对应的平均资本基础

ROA and ROE use the appropriate average capital base

本题库通常用净利润除平均总资产计算ROA，用净利润除平均权益计算ROE。EBIT除平均资产是经营回报口径，不能在问普通ROA时擅自替换。分析时比较题目规定的定义和是否需要对普通股股东利润作调整。

The bank generally defines ROA as net income divided by average total assets and ROE as net income divided by average equity. EBIT divided by assets is an operating return measure, not an automatic substitute for ordinary ROA. Follow the definition and any common-shareholder adjustments specified.

ROA = Net income / Average total assets
ROE = Net income / Average shareholders' equity

对应原题 / Related questions: Q71

8 三步杜邦已经包含税和利息的影响

Three-step DuPont already embeds taxes and interest in net margin

ROE等于净利率乘总资产周转率乘财务杠杆。净利率使用税后净利润，已包含税和利息效果；如果又乘税负系数，就重复扣税。第74题给出税负系数是干扰信息。反求周转率时直接用ROE除净利率再除杠杆即可。

ROE equals net profit margin times asset turnover times financial leverage. Net margin already reflects interest and taxes; multiplying by tax burden again double-counts tax. Q74 includes tax burden as a distractor. To solve for turnover, divide ROE by net margin and leverage.

ROE = (NI / Revenue) x (Revenue / Average assets) x (Average assets / Average equity)

对应原题 / Related questions: Q51, Q74

9 五步杜邦的tax burden不是税率

In five-step DuPont, tax burden is not the tax rate

五步把净利率拆成税负系数NI/EBT、利息负担系数EBT/EBIT、EBIT利润率EBIT/Revenue，再乘周转率和杠杆。税负系数表示税前利润中保留下来的比例，所以有效税率等于1减税负系数。第114题算出57%左右的是税率，对应税负系数约43%。

Five-step DuPont splits net margin into tax burden NI/EBT, interest burden EBT/EBIT and EBIT margin EBIT/revenue, then multiplies by turnover and leverage. Tax burden is the share of pretax profit retained, so the effective tax rate equals one minus tax burden. In Q114 the tax rate is about 57%, while tax burden is about 43%.

ROE = Tax burden x Interest burden x EBIT margin x Asset turnover x Leverage
Effective tax rate = 1 - NI / EBT

对应原题 / Related questions: Q114

做题前自检 / Before you answer

比率题检查四件事：平均还是期末、债务还是负债、税前还是税后、次数还是天数。

Check four distinctions: average versus ending balances, debt versus liabilities, before-tax versus after-tax profit, and turnover versus days.

再用原题举例 / Core original examples

Q28 现金转换周期 | 代表题

Cash conversion cycle

原题第6页 / Question p. 6 答案第28页 / Solution p. 28 已核对 / Checked

某公司应付账款周转率为 8，存货周转率为 2，应收账款周转率为 10。假设所有采购和销售均为赊购赊销，按一年 360 天计算，现金转换周期为多少？

An analyst gathers the following information about a company:

Payables turnover	8
Inventory turnover	2
Receivables turnover	10

If all purchases and sales were made on credit, the cash conversion cycle (based on a 360-day year) is:

A 99 天。
99 days

B 171 天。
171 days

C 261 天。
261 days

答案 / Answer B | 核对 / Review B

先把周转率转成天数：DIO=360/2=180 天；DSO=360/10=36 天；DPO=360/8=45 天。
CCC=DIO+DSO−DPO=180+36−45=171 天。供应商给予的账期替公司承担一部分资金占用，所以 DPO 应扣除。

Convert turnover ratios into days: DIO=360/2=180, DSO=360/10=36 and DPO=360/8=45. Then CCC=DIO+DSO−DPO=180+36−45=171 days. Supplier credit finances part of the operating cycle, which is why payables days are subtracted.

易错点 / Trap 本题明确 360 天，不要默认用 365；DPO 前面的符号是减号。

Use the specified 360-day year and subtract, rather than add, DPO.

Q74 三因素杜邦与重复扣税 | 代表题

Three-factor DuPont and double-counting tax

原题第16页 / Question p. 16 答案第74页 / Solution p. 74 已核对 / Checked

公司净利润率3.0%，总资产周转率1.8，财务杠杆1.5，税负比率0.85。ROE最接近多少?

An analyst gathers the following information about a company:

Net profit margin	3.0%
Total asset turnover	1.8
Financial leverage	1.5
Tax burden	0.85

ROE is closest to:

A 5.4%。

B 6.9%。

C 8.1%。

答案 / Answer C | 核对 / Review C

ROE=净利润率×总资产周转率×权益乘数=3.0%×1.8×1.5=8.1%，选C。5.4%只做到ROA，遗漏杠杆；6.9%又乘了0.85，把已经包含在净利润中的税负重复计算。只有从EBIT利润率等税前口径展开五因素杜邦时，才另乘相应负担比率。

ROE = net profit margin × total asset turnover × equity multiplier = 3.0% × 1.8 × 1.5 = 8.1%, answer C. The 5.4% distractor stops at ROA. Multiplying again by 0.85 double-counts tax because net margin is already after tax. Separate tax and interest burdens belong in a consistently constructed five-factor decomposition.

易错点 / Trap 净利润率已是税后，税负比率在此是干扰项。

Net margin is already after tax, making the tax-burden ratio a distractor here.

Q96 速动比率的分子 | 代表题

The quick-ratio numerator

原题第21页 / Question p. 21 答案第96页 / Solution p. 96 已核对 / Checked

一家公司流动资产和流动负债如下，单位为千英镑：
现金及等价物：800
短期有价证券：500
存货：700
应收账款：2,000

流动负债：10,000
公司的速动比率是多少?

An analyst gathers the following information (in £ thousands) about a company's current assets and liabilities:

Cash and equivalents	800
Short-term marketable securities	500
Inventory	700
Accounts receivable	2,000
Current liabilities	10,000

The company's quick ratio is:

A 0.13。

B 0.33。

C 0.40。

答案 / Answer B | 核对 / Review B

速动比率 =（现金及等价物 + 短期有价证券 + 应收账款）/ 流动负债 = (800 + 500 + 2,000)/10,000 = 0.33。存货不属于本题速动资产。A = 0.13 是现金比率；C = 0.40 是把存货也加入后的流动比率。

Quick ratio = (cash and equivalents + short-term marketable securities + receivables)/current liabilities = (800 + 500 + 2,000)/10,000 = 0.33. Inventory is excluded. A is the cash ratio, while C includes inventory and gives the current ratio.

易错点 / Trap 现金比率不含应收款；速动比率不含存货；流动比率包括全部流动资产。

Cash ratio excludes receivables; quick ratio excludes inventory; current ratio includes all current assets.

Q114 五因素杜邦与平均税率 | 代表题

Five-factor DuPont and the average tax rate

原题第25页 / Question p. 25 答案第114页 / Solution p. 114 已核对 / Checked

一家公司资料如下：
ROE：15%
利息负担系数：0.85
EBIT 利润率：30%
总资产周转率：1.1
财务杠杆：1.25
平均税率最接近多少?

An analyst gathers the following information about a company:

ROE	15%
Interest burden	0.85
EBIT margin	30%
Total asset turnover	1.1
Financial leverage	1.25

The average tax rate is closest to:

A 43%。

B 47%。

C 57%。

答案 / Answer C | 核对 / Review C

五因素杜邦：ROE = 税负系数 × 利息负担系数 × EBIT 利润率 × 资产周转率 × 财务杠杆。因此税负系数 = 0.15/(0.85 × 0.30 × 1.1 × 1.25) = 0.4278。税负系数 = 净利润/税前利润 = 1 − 平均税率，所以平均税率 = 1 − 0.4278 = 57.22%，选 C。

Five-factor DuPont gives ROE = tax burden × interest burden × EBIT margin × asset turnover × leverage. Tax burden is 0.15/(0.85 × 0.30 × 1.1 × 1.25) = 0.4278. Because tax burden = net income/pretax income = 1 − average tax rate, the rate is 57.22%, closest to C.

易错点 / Trap Tax burden 是税后保留比例，43% 不等于税率。

Tax burden is the fraction of pretax profit retained after tax, not the tax rate.

Q124 现金转换周期 | 代表题

Cash conversion cycle

原题第28页 / Question p. 28 答案第124页 / Solution p. 124 已核对 / Checked

一家公司资料如下：
项目：第 2 年；第 1 年
存货周转天数：11；13
应收账款周转天数：24；22
应付账款周转率：36；18
仅根据现金转换周期判断，公司的流动性从第 1 年到第 2 年如何变化?

An analyst gathers the following information about a company:

	Year 2	Year 1
Days of inventory on hand	11	13
Days of sales outstanding	24	22
Payables turnover	36	18

Based only on the cash conversion cycle, the company's liquidity position from Year 1 to Year 2 has:

A 恶化。
deteriorated.

B 保持不变。
remained the same.

C 改善。
improved.

答案 / Answer A | 核对 / Review A

CCC = 存货天数 + 应收天数 − 应付天数；应付天数 = 365/应付周转率。第 1 年 CCC = 13 + 22 − 365/18 = 14.72 天；第 2 年 CCC = 11 + 24 − 365/36 = 24.86 天。周期变长，经营现金占用时间增加，因此流动性恶化。虽然存货天数与应收天数之和均为 35，应付款速度明显加快，缩短了供应商提供融资的时间。

CCC = inventory days + receivable days − payable days, where payable days = 365/payables turnover. Year 1 CCC is 13 + 22 − 365/18 = 14.72 days; Year 2 is 11 + 24 − 365/36 = 24.86 days. The longer cycle means cash is tied up for longer and liquidity deteriorates. Inventory plus receivable days remain 35, but faster supplier payment reduces the financing provided by payables.

易错点 / Trap 周转率是次数，CCC 要用天数；应付周转越快，通常越早付钱。

Turnover is in times per year; CCC requires days. Faster payables turnover means paying suppliers sooner.

同知识点巩固题 / Reinforcement

Q16 应收账款周转与收款天数

Receivables turnover and days sales outstanding

原题第4页 / Question p. 4 答案第16页 / Solution p. 16 已核对 / Checked

与行业平均水平相比，下列哪个财务比率相对较低，最可能说明公司授信及收款流程非常有效率?

Compared to the industry average, which of the following financial ratios most likely indicates a company has a highly efficient credit and collection process? A relatively low:

A 应收账款周转率。
receivables turnover ratio

B 销售收现天数 DSO。
number of days sales outstanding

C 存货持有天数。
number of days of inventory on hand

答案 / Answer B | 核对 / Review B

DSO=期间天数/应收账款周转率。收款越快，DSO 越低，应收周转率越高，因此选 B。低应收周转率通常说明收款慢。存货天数衡量存货销售速度，并不直接衡量赊销回款。实际分析还应排除过度严格授信牺牲销售的情况。

DSO equals days in the period divided by receivables turnover. Faster collection means lower DSO and higher turnover, so B is correct. Low turnover suggests slower collection. Inventory days measure how quickly inventory is sold, not how quickly credit sales are collected. In practice, unusually strict credit terms can also reduce DSO while limiting sales.

易错点 / Trap 同一效率改善：周转“次数”上升，周转“天数”下降。

For the same efficiency improvement, turnover rises while days outstanding fall.

Q18 比率类别

Ratio categories

原题第4页 / Question p. 4 答案第18页 / Solution p. 18 已核对 / Checked

公司分析中，存货管理指标最恰当归入哪一类?

With respect to company analysis, measures of inventory management are best described as:

A 营运效率比率。
activity ratios

B 偿债能力比率。
solvency ratios

C 盈利能力比率。
profitability ratios

答案 / Answer A | 核对 / Review A

存货周转率和存货天数衡量日常资源运用效率，属于 activity ratios。偿债能力比率关注长期债务承受能力；盈利能力比率关注收入、资产或权益产生利润的能力。题目问的是“管理效率”，因此选 A。

Inventory turnover and inventory days measure the efficiency of day-to-day resource use, so they are activity ratios. Solvency ratios assess the capacity to meet long-term obligations, while profitability ratios assess earnings generated from sales, assets or equity. Inventory management is primarily an efficiency question.

易错点 / Trap 存货影响利润，不代表所有存货指标都属于盈利比率。

Inventory affects profit, but inventory-management measures are still activity ratios.

Q20 应收账款收款效率

Collection efficiency

原题第4页 / Question p. 4 答案第20页 / Solution p. 20 已核对 / Checked

下列哪项增加，最可能表明公司的授信和收款政策效率改善？

Which of the following most likely indicates improved efficiency of a company's credit and collection policy? An increase in:

A 应收账款周转率。
receivables turnover ratio

B 销售收现天数。
days of sales outstanding

C 应付账款天数。
number of days of payables

答案 / Answer A | 核对 / Review A

应收周转率=赊销收入/平均应收账款。其他条件不变，周转率提高意味着每单位应收支持的销售更多、收款更快。DSO 增加反而代表回款较慢；应付天数关注对供应商的付款，而非客户收款。

Receivables turnover equals credit sales divided by average receivables. Holding other factors constant, higher turnover indicates faster collection and better use of receivables. An increase in DSO means slower collection. Payables days concern payments to suppliers rather than collections from customers.

易错点 / Trap 收客户的钱看应收；付供应商的钱看应付。

Use receivables to assess customer collection and payables to assess supplier payment timing.

Q21 利润表共同比分析

Common-size income statements

原题第5页 / Question p. 5 答案第21页 / Solution p. 21 已核对 / Checked

制造企业资料如下，单位为百万美元：销售成本 150，毛利 100，销售、一般及管理费用 30。仅依据这些信息，对利润表进行纵向共同比分析时，销售、一般及管理费用占比是多少？

An analyst gathers the following information (in $ millions) about a manufacturing company:

Cost of sales	150
Gross profit	100
Selling, general, and administrative expenses	30

Based only on this information, applying vertical common-size analysis to the income statement, selling, general, and administrative expenses are:

A 12%。

B 20%。

C 30%。

答案 / Answer A | 核对 / Review A

利润表共同比的分母是收入。收入=销售成本+毛利=150+100=250。因此 SG&A 占收入比例=30/250=12%，选 A。B 用销售成本作分母；C 用毛利作分母，都不是标准的利润表纵向共同比。

The denominator in a common-size income statement is revenue. Revenue equals cost of sales plus gross profit: 150+100=250. SG&A as a percentage of revenue is 30/250=12%, choosing A. B incorrectly uses cost of sales as the denominator, while C uses gross profit.

易错点 / Trap 利润表通常除以收入；资产负债表通常除以总资产。

Income-statement common-sizing generally uses revenue; balance-sheet common-sizing generally uses total assets.

Q36 用共同比比较不同规模公司

Comparing differently sized companies using common-size statements

原题第8页 / Question p. 8 答案第36页 / Solution p. 36 已核对 / Checked

两家公司资料如下，单位为千日元。公司 1：收入 7,586,000，销售成本 3,413,700，研发费用 1,800,000，广告费用 531,020。公司 2：收入 9,445,000，销售成本 4,533,600，研发费用 1,800,000，广告费用 755,600。仅依据共同比利润表，可得出什么结论?

An analyst gathers the following information about two companies (in ¥ thousands):

	Company 1	Company 2
Revenue	7,586,000	9,445,000
Cost of goods sold	3,413,700	4,533,600
Research and development expense	1,800,000	1,800,000
Advertising expense	531,020	755,600

Based only on the companies' common-size income statements, it appears that.

A 公司 1 的广告支出高于公司 2。
Company 1 spent more on advertising than Company 2.

B 两家公司的研发支出相同。
both companies spent equally on research and development.

C 公司 1 的毛利率高于公司 2。
Company 1 has a higher gross profit margin than Company 2.

答案 / Answer C | 核对 / Review C

共同比比较看占收入的比例。公司 1 毛利率=1−3,413,700/7,586,000=55%；公司 2=1−4,533,600/9,445,000=52%，所以选 C。广告费率分别为 7% 和 8%。研发绝对金额虽然相同，但占收入比例分别约 23.73% 和 19.06%，并不相同。

Common-size analysis compares percentages of revenue. Company 1 has gross margin 1−3,413,700/7,586,000=55%, versus 1−4,533,600/9,445,000=52% for Company 2. Advertising ratios are 7% and 8%. R&D amounts are equal in currency terms, but the revenue ratios are approximately 23.73% and 19.06%, so C is the valid common-size conclusion.

易错点 / Trap 金额相等不代表共同比相等；先确认题目问金额还是比率。

Equal currency amounts do not imply equal common-size percentages.

Q51 杜邦分解反推周转率

Solving DuPont analysis for asset turnover

原题第11页 / Question p. 11 答案第51页 / Solution p. 51 已核对 / Checked

公司ROE为10%，财务杠杆为2.0，净利润率为4%，EBIT利润率为5%，利息负担比率为85%。总资产周转率最接近多少?

An analyst gathers the following information about a company:

ROE	10%
Financial leverage	2.0
Net profit margin	4%
EBIT margin	5%
Interest burden	85%

The total asset turnover ratio is closest to:

A 1.0。

B 1.3。

C 1.5。

答案 / Answer B | 核对 / Review B

使用三因素杜邦：ROE=净利润率×总资产周转率×权益乘数。因此总资产周转率=10%÷(4%×2)=1.25，最接近1.3，选B。净利润率已扣除利息和税，不需再乘利息负担；把4%换成EBIT利润率5%会错误得到A。

Use the three-factor identity: ROE = net profit margin × total asset turnover × equity multiplier. Asset turnover = 10%/(4% × 2) = 1.25, closest to 1.3, answer B. Net margin already includes interest and tax effects, so the interest-burden ratio must not be applied again.

易错点 / Trap 已有净利润率时，不要再次乘税负或利息负担。

Do not apply tax or interest burdens again when the input is already net profit margin.

Q71 资产收益率ROA

Return on assets

原题第16页 / Question p. 16 答案第71页 / Solution p. 71 已核对 / Checked

公司资料（单位：百万欧元）：EBIT为150；税前利润130；净利润110；平均总资产1,000。ROA是多少?

An analyst gathers the following information (in € millions) about a company:

EBIT	150
Earnings before taxes	130
Net income	110
Total average assets	1,000

ROA is:

A 11%。

B 13%。

C 15%。

答案 / Answer A | 核对 / Review A

本题ROA使用净利润÷平均总资产=110÷1,000=11%，选A。税前利润÷资产所得13%不是题目所用ROA；EBIT÷资产所得15%是不同的经营性收益口径。计算前要确认分子定义，不能因为题目给了EBIT就自动使用。

For this question, ROA = net income/average total assets = 110/1,000 = 11%, answer A. The 13% pre-tax return and 15% EBIT-based return use different numerator definitions. Identify the requested ratio convention before selecting from the supplied earnings figures.

易错点 / Trap ROA常规分子是净利润；operating ROA等变体须看题目定义。

Use net income for the stated ROA convention; operating-ROA variants require an explicit definition.

Q76 固定费用保障倍数

Fixed charge coverage

原题第17页 / Question p. 17 答案第76页 / Solution p. 76 已核对 / Checked

哪项比率最适合衡量公司偿付债务相关款项的能力?

Which of the following ratios is most appropriate in measuring a company's ability to cover its debt payments?

A ROE。
Return on equity

B 固定资产周转率。
Fixed asset turnover

C 固定费用保障倍数。
Fixed charge coverage

答案 / Answer C | 核对 / Review C

保障倍数将可用于支付固定费用的收益与应支付费用比较，直接反映付息及租赁等固定付款的覆盖程度，故选C。本题库使用的常见公式为(EBIT+租赁付款)÷(利息付款+租赁付款)。ROE衡量盈利性，固定资产周转率衡量资产利用效率，均不直接衡量固定付款保障。

Coverage ratios compare resources available for fixed charges with the charges due, so C most directly addresses payment capacity. The question bank uses (EBIT + lease payments)/(interest payments + lease payments). ROE measures profitability, and fixed asset turnover measures operating efficiency rather than coverage of fixed obligations.

易错点 / Trap 债务有多少看杠杆；能否支付固定费用看保障倍数。

Leverage ratios measure the debt burden; coverage ratios measure the capacity to service charges.

核对说明 / Review note
该固定费用保障公式应与题目采用的EBIT及租赁费用口径保持一致；不是所有本金到期额都直接列入此分母。
Keep the formula consistent with the EBIT and lease-expense definitions used in the question; this denominator is not a schedule of all principal maturities.

Q79 债务资本比与债务口径

Debt-to-capital and the debt definition

原题第17页 / Question p. 17 答案第79页 / Solution p. 79 已核对 / Checked

公司短期有息债务700；一年内到期长期有息债务500；非流动长期有息债务800；总股东权益7,500。仅据上述资料，债务资本比最接近多少?

An analyst gathers the following information about a company:

Short-term interest bearing debt	700
Current portion of long-term interest bearing debt	500
Non-current portion of long-term interest bearing debt	800
Total shareholders' equity	7,500

Based only on this information, the company's debt-to-capital ratio is closest to:

A 17%。

B 21%。

C 27%。

答案 / Answer B | 核对 / Review B

总有息债务=700+500+800=2,000。债务资本比=债务÷(债务+权益)=2,000÷9,500=21.05%，选B。一年内到期的长期债务仍然是债务，不能遗漏。27%来自2,000÷7,500，是债务权益比，分母不同。

Total interest-bearing debt = 700 + 500 + 800 = 2,000. Debt-to-capital = debt/(debt + equity) = 2,000/9,500 = 21.05%, answer B. The current portion of long-term debt must be included. The 27% distractor uses debt/equity rather than debt/total capital.

易错点 / Trap Current portion只是到期分类改变，债务性质没有消失。

A current maturity changes classification, not whether the amount is debt.

Q82 现金转换周期与应付周转率

Cash conversion cycle and payables turnover

原题第18页 / Question p. 18 答案第82页 / Solution p. 82 已核对 / Checked

其他条件相同，哪项变化最可能缩短现金转换周期?

All else being equal, the cash conversion cycle most likely shortens if:

A 应付账款周转率下降。
payables turnover decreases.

B 存货周转率下降。
inventory turnover decreases.

C 应收账款周转天数上升。
days of sales outstanding increases.

答案 / Answer A | 核对 / Review A

CCC=DIO+DSO-DPO，且DPO=365÷应付账款周转率。应付周转率下降意味着付款更慢、DPO上升；因为DPO前面是负号，CCC缩短，选A。存货周转率下降使DIO上升，DSO上升也会拉长CCC。较慢付款可改善现金周期，但是否损害供应商关系要另看。

CCC = DIO + DSO − DPO, and DPO = 365/payables turnover. Lower payables turnover raises DPO, which shortens CCC because DPO is subtracted, so A is correct. Lower inventory turnover increases DIO, and higher DSO also lengthens CCC. A shorter cycle from slower payment is not automatically costless operationally.

易错点 / Trap 周转率和周转天数反向变化；DPO在CCC公式里还要再减一次。

Turnover and days move oppositely, and DPO enters the CCC formula with a minus sign.

Q85 结合杠杆与保障倍数评估偿债能力

Assessing solvency with leverage and coverage

原题第19页 / Question p. 19 答案第85页 / Solution p. 85 已核对 / Checked

三家公司资料（单位：百万美元）：公司1总资产100、总债务20、总权益80、EBIT 8、利息付款4；公司2对应为200、50、150、10、4；公司3对应为400、80、320、12、4。哪家公司偿债能力最强?

An analyst gathers the following information about three companies (in $ millions):

	Company 1	Company 2	Company 3
Total assets	100	200	400
Total debt	20	50	80
Total equity	80	150	320
Earnings before interest and taxes (EBIT)	8	10	12
Interest payments	4	4	4

Based on this information, which company is most solvent?

A 公司1。
Company 1

B 公司2。
Company 2

C 公司3。
Company 3

答案 / Answer C | 核对 / Review C

公司1和3债务资产比均为20%，优于公司2的25%；两者债务权益比也同为25%。再比较利息保障倍数EBIT÷利息：公司1=2倍、公司2=2.5倍、公司3=3倍。公司3在相对低杠杆的同时拥有最高利息保障，故选C。不能只看债务绝对金额。

Companies 1 and 3 both have debt/assets of 20% and debt/equity of 25%, lower than Company 2’s leverage. Interest coverage is 8/4 = 2.0, 10/4 = 2.5 and 12/4 = 3.0. Company 3 combines the lowest relative leverage with the strongest interest coverage, so C is correct. Absolute debt alone ignores company size.

易错点 / Trap 偿债能力至少结合债务比例与盈利覆盖，不能只比较债务额。

Combine relative leverage with earnings coverage rather than comparing debt amounts alone.

Q87 债务权益比转换成债务资本比

Converting debt-to-equity into debt-to-capital

原题第19页 / Question p. 19 答案第87页 / Solution p. 87 已核对 / Checked

债务权益比为1.0，最可能对应的债务资本比是多少?

A debt-to-equity ratio of 1.0 most likely results in a debt-to-capital ratio of.

A 0.5。

B 1.0。

C 2.0。

答案 / Answer A | 核对 / Review A

D/E=1表示债务D与权益E相等。债务资本比=D/(D+E)=D/(2D)=0.5，选A。通用转换公式：若x=D/E，则D/(D+E)=x/(1+x)。Capital在这里包含债务加权益，不等同于equity。

Debt/equity of 1 means D = E. Therefore debt/capital = D/(D + E) = D/(2D) = 0.5, answer A. More generally, if x = D/E, then D/(D + E) = x/(1 + x). Capital here includes both debt and equity; it is not another word for equity.

易错点 / Trap 把分母的equity与capital看清楚。

Read the denominator carefully: equity and total capital are different.

Q90 保障倍数改善但杠杆恶化

Improving coverage alongside worsening leverage

原题第20页 / Question p. 20 答案第90页 / Solution p. 90 已核对 / Checked

制造商资料（单位：千欧元）：第2年平均总资产500、平均总负债400、平均总权益100、EBIT 35、利息付款5；第1年对应为450、330、120、40、8。哪些比率可能显示公司从第1年至第2年的偿债能力改善?

An analyst gathers the following information (in € thousands) about a manufacturing company:

	Year 2	Year 1
Average total assets	500	450
Average total liabilities	400	330
Average total shareholders' equity	100	120
EBIT	35	40
Interest payments	5	8

Based only on this information, which of the following ratio (s) may indicate improved solvency from Year 1 to Year 2?

A 仅利息保障倍数。
Interest coverage ratio only

B 仅财务杠杆比率。
Financial leverage ratio only

C 利息保障倍数和财务杠杆比率两者。
Both interest coverage ratio and financial leverage ratio

答案 / Answer A | 核对 / Review A

利息保障倍数从40÷8=5倍提高到35÷5=7倍，显示付息覆盖改善。权益乘数从450÷120=3.75提高到500÷100=5，表示对负债融资的依赖更大、杠杆风险加重。因此只有利息保障倍数指向改善，选A。并非所有比率“越高越好”。

Interest coverage improves from 40/8 = 5 to 35/5 = 7. The equity multiplier rises from 450/120 = 3.75 to 500/100 = 5, indicating greater leverage and financial risk. Only interest coverage therefore signals improved solvency, answer A. An increase is favorable for coverage but unfavorable for leverage.

易错点 / Trap 保障倍数上升通常有利；杠杆比率上升通常代表风险增大。

Higher coverage is generally favorable, while higher leverage generally means greater risk.

Q95 流动性比率

Liquidity ratios

原题第21页 / Question p. 21 答案第95页 / Solution p. 95 已核对 / Checked

以下哪一项最可能衡量公司履行短期债务的能力?

Which of the following is most likely a measure of a company's ability to meet its short-term obligations?

A 速动比率。
Quick ratio

B 营业利润率。
Operating profit margin

C 应付账款周转天数。
Days of payables outstanding

答案 / Answer A | 核对 / Review A

短期偿债能力对应流动性（liquidity）。速动比率比较现金、短期有价证券及应收款与流动负债，直接衡量可迅速变现的资产对短期义务的覆盖。营业利润率属于盈利能力指标；应付账款周转天数属于营运效率指标。

The ability to meet short-term obligations is liquidity. The quick ratio compares cash, short-term marketable securities and receivables with current liabilities. Operating profit margin measures profitability, while days payable outstanding is an activity measure.

易错点 / Trap 先辨认题目问流动性、偿债能力、营运效率还是盈利能力。

First identify whether the question concerns liquidity, solvency, activity or profitability.

Q97 债务比率与负债口径

Debt ratio and the definition of debt

原题第21页 / Question p. 21 答案第97页 / Solution p. 97 已核对 / Checked

一家公司资料如下，单位为百万英镑：
总资产：400
总负债：200
总债务：100
总权益：200
总债务比率是多少？

An analyst gathers the following information (in £ millions) about a company:

Total assets	400
Total liabilities	200
Total debt	100
Total equity	200

The total debt ratio is:

A 0.25。

B 0.50。

C 2.00。

答案 / Answer A | 核对 / Review A

按本题使用的定义，总债务比率 = 总债务/总资产 = 100/400 = 0.25。总债务（debt）不能直接换成所有负债（liabilities），因为应付账款等经营负债通常不计入这一债务口径。0.50 可由债务/权益或负债/资产得到，都不是本题要求；2.00 是资产/权益。

In this question, total debt ratio means total debt/total assets = 100/400 = 0.25. Debt is not interchangeable with all liabilities: operating liabilities such as trade payables generally lie outside this debt measure. A result of 0.50 uses debt/equity or liabilities/assets; 2.00 is the equity multiplier.

易错点 / Trap 看清 debt 与 liabilities，以及题目给定的比率定义。

Distinguish debt from liabilities and follow the ratio definition used in the question.

Q107 财务杠杆与权益乘数

Financial leverage and the equity multiplier

原题第23页 / Question p. 23 答案第107页 / Solution p. 107 已核对 / Checked

财务杠杆比率可以怎样计算？

The financial leverage ratio may be calculated as:

A 息税前利润（EBIT）除以利息支付。
EBIT divided by interest payments.

B 总债务除以股东权益总额。
total debt divided by total shareholders' equity.

C 平均总资产除以平均股东权益。
average total assets divided by average shareholders' equity.

答案 / Answer C | 核对 / Review C

杜邦分析中的财务杠杆比率，也称权益乘数，等于平均总资产/平均股东权益。它表示每一单位权益支持多少资产。A 是利息保障倍数；B 是债务权益比率，二者不能替代杜邦公式里的权益乘数。

The financial leverage ratio used in DuPont analysis is average total assets/average shareholders' equity, also called the equity multiplier. It measures assets supported by each unit of equity. A is interest coverage and B is debt-to-equity, neither of which is the DuPont multiplier.

易错点 / Trap 杜邦的 leverage 是 A/E，不是 D/E。

DuPont leverage is A/E, not D/E.

Q108 防御间隔比率

Defensive interval ratio

原题第23页 / Question p. 23 答案第108页 / Solution p. 108 已核对 / Checked

哪项指标表示：在没有新增现金流入时，公司依靠现有流动性资产还能支付日常现金支出多长时间?

Which of the following is defined as how long a company can continue to pay its daily cash expenditures from its existing liquid assets without receiving additional cash inflow?

A	现金转换周期。 Cash conversion cycle
B	防御间隔比率。 Defensive interval ratio
C	固定支出保障倍数。 Fixed charge coverage

答案 / Answer B | 核对 / Review B

防御间隔比率 = 可动用的流动性资产/平均每日现金经营支出，单位是天数，直接回答“不再进钱还能撑多久”。现金转换周期衡量经营资金从投入到收回的时间；固定支出保障倍数衡量盈利对利息及租赁等固定义务的覆盖。

The defensive interval is liquid assets divided by average daily cash operating expenditures, expressed in days. It asks how long existing liquid resources can cover expenditure without new inflows. The cash conversion cycle measures operating cash timing; fixed charge coverage measures earnings coverage of fixed obligations.

易错点 / Trap defensive interval 看现有现金资源能撑几天；CCC 看经营资金被占用几天。

Defensive interval measures days of financial endurance; CCC measures days of cash tied up in operations.

Q122 资产负债表垂直共同比

Vertical common-size balance sheets

原题第27页 / Question p. 27 答案第122页 / Solution p. 122 已核对 / Checked

一家公司资料如下，单位为百万欧元：
现金及现金等价物：40
流动资产总额：125
非流动资产总额：35
收入：200
对资产负债表进行垂直共同比分析时，现金及现金等价物占比是多少?

An analyst gathers the following information (in € millions) about a company:

Cash and cash equivalents	40
Total current assets	125
Total non-current assets	35
Revenue	200

Applying vertical common-size analysis to the company's balance sheet, cash and cash equivalents are:

A 20%。

B 25%。

C 32%。

答案 / Answer B | 核对 / Review B

资产负债表共同比以总资产为分母。总资产 = 流动资产 125 + 非流动资产 35 = 160，因此现金占比 = 40/160 = 25%。现金已经包含在流动资产 125 中，不能再把 40 加一次；收入 200 是利润表共同比常用的分母，不适用于这里。

A common-size balance sheet uses total assets as its base. Total assets = 125 + 35 = 160, so cash represents 40/160 = 25%. Cash is already included in current assets and must not be counted twice. Revenue is the usual income-statement base, not the balance-sheet base.

易错点 / Trap 资产负债表除总资产；利润表通常除收入。

Balance-sheet items use total assets; income-statement items usually use revenue.

Q123 应付账款周转率

Payables turnover

原题第27页 / Question p. 27 答案第123页 / Solution p. 123 已核对 / Checked

一家公司资料如下，单位为千欧元：
项目：第 2 年；第 1 年
收入：2,400；2,000
销售成本：1,800；1,400
期末应付账款：180；220
仅根据这些资料，第 2 年应付账款周转率是多少？

An analyst gathers the following information (in € thousands) about a company:

	Year 2	Year 1
Revenue	2,400	2,000
Cost of sales	1,800	1,400
Ending accounts payable	180	220

Based only on this information, the payables turnover ratio for Year 2 is:

A 9。

B 10。

C 12。

答案 / Answer A | 核对 / Review A

应付账款周转率通常 = 采购额/平均应付账款。题目没有采购额或存货变动，依其解法用销售成本近似采购额。平均应付账款 = (180 + 220)/2 = 200；周转率 = 1,800/200 = 9。B 错用期末而非平均应付账款；C 错用收入作分子。

Payables turnover is normally purchases/average payables. With purchases and inventory changes unavailable, the question uses cost of sales as a proxy. Average payables are (180 + 220)/2 = 200, so turnover is 1,800/200 = 9. B uses ending payables; C uses revenue instead of purchases or its proxy.

易错点 / Trap 流量除平均存量；AP 周转率分子优先用采购额，资料不足时才按题意近似。

Divide a period flow by an average balance; use purchases first, and a proxy only when the question warrants it.

Q126 固定支出保障倍数

Fixed charge coverage

原题第28页 / Question p. 28 答案第126页 / Solution p. 126 已核对 / Checked

一家公司资料如下，单位为百万美元：
EBIT：16
净利润：8
利息支付：6
租赁支付：4
固定支出保障倍数最接近多少?

An analyst gathers the following information (in $ millions) about a company:

EBIT	16
Net income	8
Interest payments	6
Lease payments	4

The fixed charge coverage ratio is closest to:

A 1.2。

B 1.6。

C 2.0。

答案 / Answer C | 核对 / Review C

按本题公式，固定支出保障倍数 = (EBIT + 租赁支付)/(利息支付 + 租赁支付) = (16 + 4)/(6 + 4) = 2.0。分子把已扣除的租赁费用加回，使其成为覆盖这两类固定支出之前的盈利。A 错用净利润；B 只在分母加租赁支付，分子没有相应加回。

Using the formula tested here, fixed charge coverage = (EBIT + lease payments)/(interest payments + lease payments) = (16 + 4)/(6 + 4) = 2.0. Adding lease payments back to the numerator gives earnings before the fixed charges being covered. A uses net income; B adds lease payments only to the denominator.

易错点 / Trap 分母若包括租赁固定支出，分子需恢复到扣除这类支出之前。

When lease charges enter the denominator, restore earnings before those charges in the numerator.

10 财务预测与分析偏差

Forecasting and analytical biases

用业务驱动因素预测利润，并避免把周期高点和旧观点当成常态。

Forecast from business drivers without mistaking peak-cycle earnings or old beliefs for a sustainable baseline.

本章 7 题；代表题 Q10、Q84

先学知识点 / Learn the rules first

1 五力分析连接竞争格局和利润率

Five forces link competition to profit margins

替代品威胁低、客户议价能力弱，通常有利于企业保持利润。五力分析不仅比较同行，也能评估公司未来利润率相对其历史水平的变化。不要把它当作只做同行排名的工具。

Low substitution threats and weak buyer bargaining power generally support profitability. Five-forces analysis informs margins relative to competitors and to the company's own historical levels. It is not limited to ranking peers.

对应原题 / Related questions: Q5, Q9

2 先预测收入和成本 再计算利润率

Forecast revenue and cost separately, then calculate margin

新毛利率等于新收入减新销货成本，再除新收入。不能直接把收入增速减成本增速当成毛利率变化。利润率从75%变为75.93%，是增加约0.93个百分点；若问相对增长百分比，应再除原来的75%。

Forecast gross margin as forecast revenue minus forecast COGS, divided by forecast revenue. Do not subtract cost growth from revenue growth and label the result a margin change. A rise from 75% to 75.93% is about 0.93 percentage points; its relative percentage increase uses 75% as the base.

Forecast gross margin = 1 - [Current COGS x (1 + Cost growth)] / [Current revenue x (1 + Sales growth)]

对应原题 / Related questions: Q10

3 价格弹性先推销量 再推收入

Use price elasticity to estimate volume before revenue

需求价格弹性的绝对值0.8，价格上升10%，题库近似意味着销量下降8%。收入同时受价格和销量影响，需将两个变化相乘，不能直接说收入上升8%。单位成本不变也不代表总销货成本不变，因为销量变了。

An absolute price elasticity of 0.8 implies an approximate 8% decline in volume for a 10% price increase in the bank's calculation. Revenue reflects both price and quantity, so multiply the two effects rather than claiming an 8% revenue increase. Unchanged unit cost does not mean unchanged total COGS when volume changes.

Approximate change in quantity = - Elasticity x Change in price
Revenue multiplier = Price multiplier x Quantity multiplier

对应原题 / Related questions: Q11

4 正常化盈利看周期中点 TTM用滚动四季

Normalize around mid-cycle earnings and roll the TTM window

周期性公司的正常化盈利应接近剔除暂时因素后的周期中点，不用景气高峰直接外推。滚动12个月利润等于最近完整年度利润，加本年已发生期间利润，再减去年同期利润。第84题不要把两个半年利润简单相加，因为所要区间是跨年度的最近12个月。

For cyclical businesses, normalized earnings should reflect a mid-cycle level after removing temporary factors, not the peak. TTM profit equals the latest full-year profit plus the current year-to-date period minus the corresponding prior-year period. Q84 requires the latest cross-year 12 months, not simply two selected half-year figures.

TTM profit = Last full-year profit + Current YTD profit - Prior-year comparable YTD profit

对应原题 / Related questions: Q8, Q84

5 保守性偏差是更新信息不足

Conservatism bias means insufficient updating

面对新信息仍过度坚持原观点，是conservatism bias。它不同于会计上谨慎确认收益的conservative accounting，也不同于高估自己预测能力的overconfidence。先确定题目在谈认知偏差还是会计政策。

Conservatism bias is failure to update prior beliefs sufficiently when new information arrives. It differs from conservative accounting and from overconfidence in one's forecasting ability. Identify whether the question concerns a cognitive bias or an accounting policy.

对应原题 / Related questions: Q7

做题前自检 / Before you answer

预测题依次检查：驱动因素是否独立计算、百分比还是百分点、周期区间是否匹配、TTM是否正确剔除去年同期。

Check separately forecast drivers, percentage versus percentage points, cycle consistency and correct removal of the prior-year comparable period from TTM.

再用原题举例 / Core original examples

Q10 销售预测与毛利率 | 代表题

Sales forecasts and gross margin

原题第2页 / Question p. 2 答案第10页 / Solution p. 10 已核对 / Checked

分析师用以下信息预测毛利率。当前金额单位为百万美元：销售收入 1,200，预测增长 8%；销售成本 300，预测增长 4%。预测毛利率的变化最接近哪项?

An analyst uses the following information to forecast a company's gross profit margin:

	Current Amount (in $ millions)	Forecasted Growth
Sales	1,200	8%
Cost of sales	300	4%

The analyst's forecasted gross profit margin should be closest to a(n):

A 下降 1%。
decrease of 1%.

B 提高 1%。
increase of 1%.

C 提高 4%。
increase of 4%.

答案 / Answer B | 核对 / Review B

先预测金额，再算比例。当前毛利率=(1,200−300)/1,200=75%。预测收入=1,200×1.08=1,296；预测销售成本=300×1.04=312；预测毛利率=(1,296−312)/1,296=75.93%。增加约 0.93 个百分点，最接近 B 的 1%。

Forecast the amounts before calculating the margin. Current gross margin is (1,200−300)/1,200=75%. Forecast revenue is 1,296 and cost of sales is 312. Forecast gross margin is (1,296−312)/1,296=75.93%, an increase of about 0.93 percentage points, closest to B.

易错点 / Trap 不能直接用 8%−4%=4% 作为毛利率变化；增长率的原始基数不同。

Do not subtract the two growth rates to obtain the margin change; they apply to different starting amounts.

核对说明 / Review note
选项中的“增加 1%”按原答案意图指约 1 个百分点，而非精确的相对增长 1%。
The intended comparison is approximately one percentage point, rather than an exact 1% relative increase.

Q84 滚动十二个月利润 | 代表题

Trailing twelve-month earnings

原题第18页 / Question p. 18 答案第84页 / Solution p. 84 已核对 / Checked

公司12月31日年结，利润资料（单位：千欧元）：第1年截至6月30日的6个月利润2,000；第1年全年利润1,500；第2年截至6月30日的6个月利润2,200。第2年6月30日止滚动12个月利润是多少?

An analyst gathers the following information (in € thousands) about a company whose fiscal year ends on 31 December:

Earnings for the six months ended 30 June of Year 1	2,000
Earnings for the year ended 31 December of Year 1	1,500
Earnings for the six months ended 30 June of Year 2	2,200

The company's trailing 12 month earnings (in € thousands) for the period ended 30 June of Year 2 is:

A 1,700。

B 3,700。

C 4,200。

答案 / Answer A | 核对 / Review A

滚动12个月=上年全年-上年同期累计+本年同期累计=1,500-2,000+2,200=1,700，选A。上年下半年利润实际为-500，不能漏掉亏损。直接用上年全年加本年半年会得到18个月数据；把两年上半年相加也不是连续12个月。

TTM earnings = prior full year − prior comparable year-to-date period + current year-to-date period = 1,500 − 2,000 + 2,200 = 1,700, answer A. The prior second half made a 500 loss. Adding the full prior year to the current half-year creates 18 months, while adding two first halves does not create a continuous twelve-month period.

易错点 / Trap TTM记“全年减旧同期加新同期”。

Remember: prior full year minus old comparable YTD plus new YTD.

同知识点巩固题 / Reinforcement

Q5 波特五力与定价权

Porter five forces and pricing power

原题第1页 / Question p. 1 答案第5页 / Solution p. 5 已核对 / Checked

在波特五力框架下，公司在以下哪种情况下最可能拥有最高盈利能力?

In the Porter's five forces framework, a company is most likely to have the greatest profitability if:

A 替代品威胁低，且买方议价能力低。
the threat of substitutes is low and the bargaining power of buyers is low.

B 替代品威胁低，且买方议价能力高。
the threat of substitutes is low and the bargaining power of buyers is high.

C 替代品威胁高，且买方议价能力低。
the threat of substitutes is high and the bargaining power of buyers is low.

答案 / Answer A | 核对 / Review A

替代品少，客户更难转向其他产品；买方议价能力弱，公司更容易维持价格和利润率。两项同时有利的是 A。B 的强买方会压价，C 的大量替代品会限制提价能力。五力分析的作用是把行业竞争结构转换为收入增长、成本及利润率假设。

A low threat of substitutes makes switching to alternatives harder, while weak buyer bargaining power allows the firm to defend prices. A combines both favorable conditions. Strong buyers in B can demand lower prices; substitutes in C limit pricing power. The framework links industry structure to assumptions about sales, costs and margins.

易错点 / Trap 买方议价能力越高，通常越不利于卖方利润率。

Stronger buyer bargaining power generally reduces the seller’s profit potential.

Q7 保守性偏差

Conservatism bias

原题第2页 / Question p. 2 答案第7页 / Solution p. 7 已核对 / Checked

没有充分纳入新信息，从而维持此前观点或预测，最符合以下哪种偏差？

Maintaining prior views or forecasts by inadequately incorporating new information best describes:

A 保守性偏差。
conservatism bias.

B 过度自信偏差。
overconfidence bias.

C 代表性偏差。
representativeness bias.

答案 / Answer A | 核对 / Review A

保守性偏差表现为更新观点太慢：出现相关新信息后，仍过度坚持旧预测。过度自信是高估自身判断或预测精度；代表性偏差是过度依赖相似特征或既有分类。这里关键词是“新信息纳入不足”，所以选 A。

Conservatism bias means updating beliefs too slowly when relevant new information arrives. Overconfidence means unwarranted confidence in one’s judgment or forecasting precision. Representativeness means relying too heavily on resemblance to familiar patterns or categories. Inadequate incorporation of new information identifies A.

易错点 / Trap 这里的 conservatism 是行为偏差，不是会计上的谨慎性处理。

Here conservatism is a behavioral bias, not conservative accounting.

Q8 周期企业的正常化盈利

Normalized earnings for cyclical firms

原题第2页 / Question p. 2 答案第8页 / Solution p. 8 已核对 / Checked

对于周期性行业的公司，正常化盈利最恰当的描述是什么？

For a company in a cyclical industry, normalized earnings are best described as:

A 包含收购影响的当期盈利。
current earnings that include the impact of acquisitions.

B 没有暂时性因素影响时的周期中段盈利。
mid-cycle earnings in the absence of temporary factors.

C 剔除暂时性因素后的周期高峰年份盈利。
earnings from the peak years excluding temporary factors.

答案 / Answer B | 核对 / Review B

周期企业的高峰利润和低谷利润都不宜直接当作长期正常水平。正常化盈利要剔除异常或暂时影响，再采用合理的周期中段盈利能力，因此选 B。只剔除一次性因素却仍采用高峰年份，仍可能高估可持续利润。

Peak and trough earnings are poor stand-alone estimates of a cyclical company’s normal earning power. Normalization removes unusual or temporary influences and estimates a reasonable mid-cycle level, making B correct. Removing one-off items from a peak year does not remove the cyclicality embedded in that year’s earnings.

易错点 / Trap 正常化不是“取最好的一年”，也不是只删除一次性项目。

Normalization is not choosing the best year or merely deleting one-off items.

Q9 五力分析中的比较基准

Benchmarks in five forces analysis

原题第2页 / Question p. 2 答案第9页 / Solution p. 9 已核对 / Checked

波特五力分析用于估计公司未来利润率相对于什么基准的高低?

Porter's five forces analysis is used to estimate a company's future profit margin relative to:

A 仅相对于竞争对手。
only its competitors.

B 仅相对于其历史利润率。
only its historic margins.

C 同时相对于竞争对手及其历史利润率。
both its competitors and its historic margins.

答案 / Answer C | 核对 / Review C

竞争结构和公司地位可以解释利润率为什么高于或低于同行，也能解释未来利润率为何不同于公司自身历史。比如买方议价能力上升，可能同时压低相对同行和相对历史的利润率，因此两个比较维度都适用。

Industry structure and competitive position help assess profitability relative to peers and relative to the company’s own history. Changes in bargaining power, substitutes or rivalry can alter both comparisons. The framework is therefore useful for both cross-company and historical benchmarks, making C correct.

易错点 / Trap 行业分析并不只做同行横向排名，也支持历史趋势判断。

Industry analysis supports both peer comparisons and judgments about changes from historical margins.

Q11 需求价格弹性与销量

Price elasticity and sales volume

原题第2页 / Question p. 2 答案第11页 / Solution p. 11 已核对 / Checked

某产品需求价格弹性为 0.8，单位成本保持不变。售价提高 10% 最可能产生什么结果?

If the price elasticity of demand for a product is 0.8 and its unit cost remains constant, a 10% increase in its selling price will most likely result in:

A 销售成本不变。
no change in cost of sales.

B 销量下降 8%。
a decrease in volume of 8%.

C 收入增加 8%。
an increase in revenue of 8%.

答案 / Answer B | 核对 / Review B

按题目采用的弹性近似，销量变化率=−0.8×10%=−8%，所以选 B。单位成本不变，但销量减少，因此销售成本总额也下降。若用题中的离散变化计算收入，收入变为原来的 1.10×0.92=1.012，即约提高 1.2%，并非 8%。

Using the question’s elasticity approximation, quantity changes by −0.8×10%=−8%, so B is correct. Constant unit cost does not mean constant total cost: fewer units reduce total cost of sales. With the stated discrete changes, revenue becomes 1.10×0.92=1.012 of its original amount, about a 1.2% increase rather than 8%.

易错点 / Trap 弹性先给出销量变化，不直接给出营业收入变化。

Elasticity gives the quantity response first; revenue also depends on the new price.
